It is this kind of life in the little town of Poros, stranded about 2,000 years up the stream of time, which Mr. Horton describes with kindly humor and the sympathetic insight of a poet. He found there still lingering, and hospitably sheltered under the wing of the Greek Church, a whole brood of classic superstitions, belief in the evil eye, in Nereids, the three Fates, in vampires, and in a Charos slightly transformed from the ancient ferryman. These beings haunt the mind of the peasant with a constant obsession—they played their part in Mrs. Horton's simple ménage. "In America," she remarks, "when anything goes wrong with the children we call in the doctor." "You do very well," says Papa-Yanne, who has just bestowed his benediction on the household, "but you should call in the priest first. In nine cases out of ten the child has nothing but the evil eye, which a simple exorcism would cure immediately"; and Papa-Yanne really believed what he said, though he received a regular fee of five francs for his exorcism.

It is hard for us who live in the midst of the science of the common school to conceive of such survivals, and Mr. Horton's book makes an unofficial document for the study of the human mind more valuable than if it were compiled by a professor of psychology. We in America are doing our best, as Dr. Alexander in his preface reminds us, to preserve the poverty—if not the peace—of such villages by the tariff of 100 per cent. which we impose on their currants, and all this to support the feeble, tottering State of California, which already produces offensively large varieties of cherries and peaches.

---

*L'Education des Jeunes Filles.* Par Henri Marion, Professeur à la Faculté des Lettres de Paris. Paris: Armand Colin.

M. Henri Marion, who occupied the chair of the Science of Education at the Sorbonne, died about six years ago. This book, which is a posthumous one, is composed of a course of nineteen lectures delivered by him before his faithful public in the last year of his life. It touches upon the various problems which relate to the education of girls, and discusses them thoroughly without overlooking any detail, however trivial it may seem; there are no trivial details for M. Marion. In the chapter on the moral education of girls, he devotes some paragraphs to the *tutoiement* between parents and children, and insists on the danger of children's balls. The chapter on physical education deals with alimentation and cleanliness, and examines the question of garments, shoes, and corsets. In another place he discusses the part that "suggestive therapeutics," or the use of a sort of hypnotic influence, might play in order to correct bad habits, such as cowardice, anger, laziness, and untruthfulness. All the important problems which such a subject raises are abundantly considered—the theoretical arguments in favor of the education of women, the superiority of public-school instruction over private instruction by tutors or parents, the advantages of co-education in primary classes, the utility of having female teachers in elementary classes and male teachers in advanced classes, the necessity of giving to every girl a thorough training in household economy, while at the same time developing her literary, artistic, and religious faculties, etc. The last chapters deal especially with the French educational system as established by the law of December 21, 1880, which created the "collèges" and "lycées" for girls in France.

A book like this will appeal by its very title to those who are interested in these problems of pedagogy, the most difficult of all. But only those who knew M. Marion

and have listened to his lectures and felt the magnetic influence of his personality, will realize the benefit that is to be derived from this last work of his. The clear and elegant method that characterized the speaker are also typical of the writer. But, above all, the delicate and penetrating wit, the refreshing common sense and gentle kindness, which made of him the most inspiring of teachers and the most lovable of men, give to this book that supreme charm to be found only in books in which, as Pascal has it, "behind the author we can see the man."

**THE VIRGINIA EDITION OF**

# Edgar Allan Poe

**Edited by JAMES A. HARRISON, in the University of Virginia**
**With Introductions by HAMILTON W. MABIE and CHARLES W. KENT**
**and Notes by R. A. STEWART**

## The Only Complete and Accurate Text in Existence

A glance at the new Virginia Edition of Poe, in 17 volumes, will substantiate all that is claimed for it. It has rejected the work of all previous editors and gone back directly to Poe himself, thus disclosing many errors and important new material. A biography is also added and a volume of letters.

The illustrations and features of manufacture are worthy of this great work.

## *What Others Say*

"Most valuable."—*Prof. William P. Trent, Columbia University.*

"Exquisite."—*Prof. Edward Howard Griggs.*

"Worthy of the favor of students."—*N. Y. Mail and Express.*

"The fullest collection yet presented to the public."—*N. Y. Sun.*

"Gives every promise of being the best that has ever appeared in any country."—*James Lane Allen.*

"No man living who could do this work so well."
—*George Cary Eggleston.*

"Will be a great addition to the Poe literature."
—*Thomas Nelson Page.*

"Not only an authentic text of the old material, but considerable matter which is practically new."—*N. Y. Commercial Advertiser.*

"Not until this late day has an edition of Poe appeared that is complete and authentic."—*Brooklyn Eagle.*

"Admirable both as literary work and as a piece of book-making. . . . It is difficult to see how the edition could be improved."
—*Prof. Henry van Dyke, Princeton.*

"No other edition of Poe does justice to his versatile genius."
—*New York American and Journal.*

"The most valuable compilation of the writer's wonderful literary productions that has yet been given to his readers, and may well be received as authoritative and final."—*Richmond Despatch.*

"Treated as Poe's writings have been by Prof. Harrison, the American world of letters owes him a debt of gratitude hard to measure."
—*Louisville Courier-Journal.*

"Undisturbed by the massing about him of fancied 'improvements' by eager friends or conceited critics, it will be plain that Prof. Harrison has brought to literature a real gift, has conferred upon it a true benefit."
—*Syracuse Herald.*

"Ranks among the more important literary enterprises of the year."
—*The Argonaut.*

"Complete, authentic, annotated."—*Outlook.*

"The only edition in any real sense complete."—*Prof. W. S. Currell.*

"One of the most important literary ventures of the season."
—*Publishers' Weekly.*

"Certainly a complete and satisfying Poe, and he is brought home as never before in any one collection of books to the reader."
—*Town and Country.*

"As thorough and complete an edition of the works of Virginia's most famous literary genius as it is possible to publish."
—*Richmond Times.*

"Throws upon the life and character of the dead poet a flood of new light and also presents his literary creations in a manner which enables us to judge of them in their true value—that which they bore to their creator when they left his hand for appeal to the public verdict. . . . An edition which must prove indispensable to every one who has at heart the love of American literature."—*Baltimore Sun.*

"The effort of the editor and publishers has been to place before the world a true, just estimate of the actual living man as he really was, neither deified by over-admiring friends nor vilified by enemies, and in that such effort has been eminently successful they may feel well justified in accepting all praise for their patient and necessarily arduous labor."—*Philadelphia Telegraph.*

"I do not see how it can ever be, or need be, superseded. It is advisable to have a complete and scholarly Poe; and such we may emphatically call this edition."—*Prof. John F. Genung, Amherst.*

"Will be a joy to the lovers of this unique American poet"
—*Washington Times.*

"A great advance over all former editions."—*The Churchman.*

"Leaves almost nothing unsaid concerning the poet and his works. So complete and handy an edition of an author is rarely found."
—*Chicago Record-Herald.*

"The 'Biography' which occupies the first volume of Professor Harrison's elaborate new edition of Poe is likely to remain for some time a standard authority for the poet's life."—*Independent.*

"Will become the standard."—*Prof. Robert Sharp, Tulane Univ'ty.*

"Not only a 'new Poe,' but must be the final Poe, final as to text, biography and history."
—*Prof. William Hand Browne, Johns Hopkins University.*

"Altogether the best and most complete edition of this author that has ever appeared. A great service to students and readers."
—*Prof. William Lyon Phelps, Yale University.*

Branch Public Library
Rockland St. 1902

## MY LIFE IN MANY STATES AND IN FOREIGN LANDS

*First Volume in Appletons' Business Series*

Written in the Mills Hotel, in my seventy-fourth year. By GEORGE FRANCIS TRAIN. Illustrated. 12mo. Cloth, $1.25 net; postage, 12 cents additional.

"Citizen Train wrote this wonderful story of a wonderful life on the top floor of the Mills Hotel, where he occupies a room possibly eight feet long and six feet wide, and where he receives his callers with a dignity, a graciousness and native hospitality that would be in keeping with the fine homes he used to live in. He has lived in that room for four years, ever since the hotel was built. It has a single bed, a dresser, a tiny table, one chair and half a dozen paper boxes."—*N. Y. World.*

*A Book of Historic Importance*

## Funds and Their Uses

A TREATISE ON

Instruments, Methods and Institutions in Modern Finance

## Animals Before Man in North America

THEIR LIVES AND TIMES

By

DR. F. A. LUCAS,

*Curator of the Division of Comparative Anatomy, United States National Museum, Washington.*

*ILLUSTRATED.*

12mo. Cloth, $1.25 net.

Postage, 12 cents additional.

## THE ROMANCE OF MY CHILDHOOD AND YOUTH

By MME. ADAM (JULIETTE LAMBER). Photogravure Portrait and Ornamental Title. 12mo. Cloth, $1.40 net; postage 14 cents additional.

One of the most interesting women whom French society and public life have known since the time of Mme. de Staël is Mme. Adam, whose pen-name, Juliette Lamber, is also her maiden name. The present volume is the first of a series of autobiographical recollections which she is now writing, and relates to a childhood and youth that were remarkably romantic.

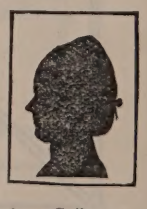
# *Sally Wister's Journal*



SALLY WISTER, 16 years old, daughter of Daniel Wister, merchant, of Philadelphia, kept a journal of her experiences during the winter of 1777–1778, while exiled from Philadelphia during its occupation by the British. The family lived with relatives in an old farm house on the Wissahickon, which was occupied at times by various prominent officers of the Continental army, and was in the immediate vicinity of several important military operations. Sally saw much of the officers and heard much of the fighting, and comments on both freely and quaintly. Gen. Smallwood is "tall, portly, well-made: a truly martial air, the behavior and manners of a gentleman"; Capt. Furnival, "the handsomest face I ever saw, a very fine person"; Capt. Finley is "wretched ugly"; Maj. Stoddert, "very reserved," but has "an engaging countenance and address," etc. Later the Major grows much less reserved. Another officer who throws off his reserve is Capt. Alexander Spottswood Dandridge, of Virginia, a relative of Martha Washington. Sally describes him in the Journal as "the handsomest man I ever beheld." He asks her if she is a Quaker, and on her saying "Yes," says, "Then you are a Tory," but this she vigorously denies. Gallantry, flirtation, sociability, war and humdrum country life jostle each other in the pages of this unpretentious journal, the whole making a picture of unequaled value for the historian—and of charm for the novel-reader as well.

It has been carefully edited from the original manuscript by ALBERT COOK MYERS, M. L., who has collected a great mass of material elucidating the text, and also many portraits, relics, documents, signatures and pictures relating to characters appearing in the Journal. It is beautifully printed on deckel-edge paper, profusely illustrated, and bound in antique style with a cover design by Walter Whitehead. *Circular on application.* ***$2.00, postpaid.*** **FERRIS & LEACH, Philadelphia**

*Travel.*

# PAGE'S LEADING FICTION

## Barbara Ladd

*By CHARLES G. D. ROBERTS*

Author of "The Kindred of the Wild," "The Heart of the Ancient Wood," etc.

With illustrations in color by FRANK VERBECK.

1 vol., gilt top, decorated binding. $1.50.

". . . From the opening chapter . . . to the final page . . . Mr. Roberts lures us on by his rapt devotion to the changing aspects of Nature and by his keen and sympathetic analysis of human character.

"'Barbara Ladd,' in short, is a delightful piece of fiction, and Mr. Roberts is to be congratulated upon his success."
—*Boston Transcript.*

## The Last Word

*By ALICE MacGOWAN*

1 vol. Library 12mo, cloth, gilt top, *Illustrated.* $1.50.

"When one receives full measure to overflowing of delight in a tender, charming and wholly fascinating new piece of fiction, the enthusiasm is apt to come uppermost. Miss MacGowan has been known before, . . . but her best gift has here declared itself. . . .

"To the student of human nature, who is interested in . . . a pure, wholesome romance of heart and hand, 'The Last Word' will bring a generous share of pleasure."—*Louisville Post.*

## Hope Loring

*By LILIAN BELL*

Author of "Abroad with the Jimmies," "The Expatriates," etc. Illustrated by FRANK T. MERRILL. 1 vol., 12mo, cloth decorative. $1.50.

"Tall, slender and athletic, fragile looking, yet with nerves and sinews of steel under the velvet flesh; frank as a boy and tender and beautiful as a woman, free and independent, yet not bold—such is 'Hope Loring,' by long odds the subtlest study that has yet been made of the American girl.

"All in all, 'Hope Loring' is a notable addition to the novels that are distinctively American in sentiment, character and treatment."—DOROTHY DIX *in the New York Journal.*

*For sale Everywhere or by the Publishers,*

**L. C. PAGE & COMPANY, Boston, Mass.**

***"The most satisfactory and stimulating criticism of this poet yet published."***
—London Times.

# The Poetry of Robert Browning

*"THE GREAT HISTORY OF THE UNITED STATES"*

# SCHOULER'S HISTORY OF THE UNITED STATES OF AMERICA. Under the Constitution

**John Fiske said of it:** "An excellent work, and it fills a place which no other book even pretends to fill."

**What is it?** A critical History of the United States, minutely and graphically describing the inner facts of her heroic colonial struggles, touching upon the organization of Congress, the welding together of the primitive States into one grand Nation for mutual defence and general welfare; the accessions of the vast territories South, West, and Northwest; the troubles of 1812; the difficulties with Mexico; the Slavery Question, embracing the mainsprings of the Civil War and which developed the greatest armed conflict the world has ever known.

***A Supplementary Volume (the sixth) covering the Civil War has lately been added, and of this volume three editions have already been issued***

Schouler's History is a **Solid American History,** containing a series of maps, showing the boundaries of different periods, presenting at a glance the development and growth of the country. This work is printed on an extra quality of paper in a clear cut type, and bound in handsome green English buckram stamped with gold, presenting an elegantly finished appearance.

**Who wrote it?** Professor James Schouler, author, educator, and eminent lawyer, and a lecturer on Law and History in two of the great universities of this country. He has spent fifteen years conscientiously seeking through the public and private records and libraries for these facts before a single line was written on this work. His History has become famous, and has long ago been accepted as the Standard History of the period.

**Why prepared?** To give to the American people an authentic, comprehensive, readable description of this wonderful period; that colleges, universities, students—in fact, every home might have an unprejudiced American History.

## What is said of it.

**Trustworthy.** "It is trustworthy, interesting, and remarkably impartial."—*Chas. E. Howard, Prof. of History, Leland Stanford, Jr., University.*

**Incomparable.** "The books have so established themselves as scholarly and attractive that it would be vain to compare them for the period treated with any other work in the field."—*A. C. McLaughlin, Prof. of History, University of Michigan.*

**The Best.** "The best work covering this period."—*J. A. James, Prof. of History, Cornell University.*

**A Necessity.** "It will be referred to by scholars who will trust it as an authority, and it will be read by the citizen who wishes a clear outline of political or social events."—*The Outlook.*

**Price** Schouler's History is complete in six large octavo volumes, bound in American buckram. Price, $2.25 per volume, or $13.50 per set.

## DODD, MEAD & COMPANY,

**PUBLISHERS,** **372 Fifth Avenue, New York.**

# The Nation.

NEW YORK, THURSDAY, NOVEMBER 13, 1902.

## The Week.

Everybody has been too busy with the election to notice that silver has suffered the direst calamity which has befallen it since the "crime of '73." While the Republican and Democratic managers were jubilantly swelling imaginary majorities, silver, mute and inglorious, was suffering real depreciation, with no Bryan to cry to heaven in its behalf. In calmer language, silver was selling for $0.50375 an ounce, the lowest price that the white metal has ever brought. Not so many years ago this would have been the occasion for tearing down the temple of Rimmon and of "riding in blood to the bridle bits." To-day most of the Democratic States have abjured Bryan and Waite—their works and their phrases—and silver rises or sinks in the markets of the world like beans or pig iron, "without the meed of a melodious tear."

---

President Roosevelt chose a poor advocate when he permitted Postmaster-General Payne to be his spokesman regarding the removal of Internal Revenue Collector Bingham of Alabama. If, as Mr. Payne's statement would indicate, Mr. Bingham was removed because he adhered to a form of party policy in Alabama not approved by the President, there would have been no excuse for the action. Using the Federal service as a means of partisan punishment is just as bad as using it as a means of partisan reward. But we think Mr. Payne has misrepresented the President. Collector Bingham evidently not only violated the rule which the President has insisted upon, against pernicious political activity on the part of Federal officers, but he also engaged in a scheme, thoroughly scandalous in its nature, for excluding qualified delegates from the Republican convention because of their color. Here was ground enough for his removal, and it was like the President at his best to act promptly and decisively. Mr. Roosevelt is right on the main contention also. If there is any justification for Alabama's new Constitution, it lies in the fact that only illiterates and paupers are by its letter excluded, while negroes, as well as white persons, who can qualify, may vote as under the old Constitution. Qualified negroes are thus entitled to full political privileges, and a Republican Administration cannot sit by and see them denied. It would be doubly shameful if Federal officials were permitted to become ringleaders in trampling upon negro rights.

In view of official attempts to explain away the tariff-reduction plank of the Iowa Republican platform, Secretary Wilson's report on the entire West, which he has recently visited, is of decided interest. He finds Republicans everywhere in an "attitude of inquiry." They are questioning whether great combinations of capital have not got beyond control, whether certain industries could not survive if the present duties were lowered; finally, "they do not believe that the tariff schedules are inspired like the Lord's Prayer." Secretary Wilson, on the whole, commends this studious attitude of the Western Republicans. His optimism will hardly be shared by the Hannas and Grosvenors of the party. "What! study the tariff, think about it!" —we may imagine them saying—"there is nothing to think about it except that revision spells the ruin of American prosperity."

---

Addicks is very bitter towards Republican newspapers which continue to point out his gross unfitness for election to the United States Senate. He bids them "confine themselves to the affairs of their respective localities." But the election of a United States Senator is not a matter of interest to a given locality alone. On the contrary, the splendid determination and energy of the anti-Addicks Republicans of Delaware, in keeping this political blackleg out of the Senate, has tended to raise the tone of political morality throughout the Union. Addicks declares that no human power can cause him to give up the fight, and, despite recent reports, all the indications are that he will brazen it out to the end. His policy of "rule or ruin" has deprived Delaware of representation in the Senate for many years. He is prepared to continue this policy whatever the cost to the State. It seems possible that the deadlock may be prolonged. The Legislature just elected will be made up of twenty-eight Republicans, twenty-three Democrats, and one Independent. Eight of the Republicans are anti-Addicks men, and the experience of recent years furnishes foundation for the hope that they will remain stanch. It would seem that there is now an excellent opportunity for the election of compromise candidates by a combination of the anti-Addicks and Democratic votes. However this may be, it is a great relief to know that the disgrace of Addicks's election is almost certainly averted.

---

In the course of his successful canvass for Governor of Pennsylvania, Judge Pennypacker said that he was in favor of ballot reform, but "could not believe" that half the stories which were told about election frauds in Philadelphia were possibly true. It is to be hoped that the extraordinary returns from two Philadelphia wards in the late voting have been brought to his attention. In 1900 McKinley received 1,738 votes in the Third Ward. This is a quarter of the city where the population diminishes year by year, rather than increases, yet the returns gave Pennypacker 3,650 votes, more than double the number received by McKinley two years before. In the Fifth Ward, which is also one of stationary population, McKinley received 1,967 votes in 1900, while Pennypacker is credited with 5,176 this year. The total vote in these two wards in 1900 was 5,470. The total vote as given this year is 9,500, an increase of more than 4,000. Such unblushing frauds speak for themselves. There can be no decency in the politics of Philadelphia, nor, indeed, of Pennsylvania, until the purity of the ballot is insisted upon and secured. There is an end of all government if such travesties of popular elections are to be tolerated. Yet it was a Republican victory won by such criminal methods, in the hands of one of the most hated and corrupt bosses in this country, that President Roosevelt said he was hoping for with "keen interest"!

---

The Republican politicians of this State are much agitated by the prospect of a Democratic Attorney-General in the next State Government. The name of Mr. John Cunneen happened to be on both the Democratic and the Prohibition tickets for that office. It is not yet known whether he is elected or not, but the chances seem rather favorable to him. As soon as this contingency became known, there was a hasty putting together of heads to see how the laws of the State could be changed so as to deprive the Attorney-General of his usual functions. It appears that the powers of this officer have been augmented lately, so that he now has charge of the legal business of all the departments of the State Government. Such powers must bring within his ken many facts that a Democrat ought not to know. So what is to be done if Mr. Cunneen is actually elected? We would suggest that a law be passed restricting the Attorney-General to his duties as a Commissioner of the Land Office and a Commissioner of the Canal Fund. These are the only functions which the State Constitution gives him. It leaves the assignment of his other duties to the Legislature. So, you see, there is no occasion for fluttering over the possible election of a Democrat to that office. Who's afraid?

---

In bringing forward again his stale old scheme for a State constabulary,

Platt exhibits his utter inability to grasp the meaning of the voting in this city last week. If, after driving the independents from the support of Republican candidates, he now wishes to force away also a large proportion of the enlightened Republicans, let him attempt to put this plan through. He says he wants to take the police out of politics. This has a noble sound, but, unfortunately, people have acquired a habit of looking sharp when Platt suggests political improvements. In this case no especial acuteness is required to discover his aim. He sees quite clearly how he could make use of an organization of, say, 8,000 men, all subject to his will. It would furnish a most excellent political machine, and could readily be made the medium of bestowing rewards and inflicting punishments. That is the only reason why he proclaims that the State Constabulary Bill may be pressed on the Legislature this winter. If it is not passed, it will be because there is a Governor at Albany who has not permitted, and says he will not permit, violations of the principle of home rule for cities, during his term of office. Platt exhibits already a wholesome fear of the lash. Mr. Odell has only to come out squarely against the constabulary scheme, as he did before, and Platt will have to put his bill away in a pigeon-hole again. Open warfare on the unscrupulous boss is the way to head off his nefarious schemes, as it is also the way to defeat his arrangements to disgrace New York by pretending to represent it at Washington.

---

A plan for reducing taxation in this city by $8,500,000 per year was submitted by Comptroller Grout a few weeks ago to the Chamber of Commerce and to various banking institutions and experts in finance for examination and advice. In substance, it proposes to discontinue the excessive collection of money for the sinking-fund, and reduce such collections to the amount necessary to meet and extinguish the city debt as it matures. It is a fact not generally understood, although Mr. Levey, the former Deputy Comptroller, took all possible pains to make it known, that the collections for sinking-fund purposes are so far in excess of the legitimate needs of the sinking-fund that, if continued till 1928, a surplus of nearly $300,000,000 will have been accumulated, in excess of the sum needed for paying and cancelling the debt maturing at that time. The whys and wherefores of this anomaly in finance are not easy to explain. Public sinking-funds in general are hard to understand. That of New York city is a patchwork composed of so many different pieces and shapes that it is a very confusing study. If we were starting a new system of municipal borrowing we should adopt a better plan. But as the present complicated system exists, and as it has led to the consequences shown by Mr. Levey, by Mayor Low and Comptroller Grout, it is best to grapple with them now. We concur with the view expressed by the Chamber of Commerce, and we do not share the doubts which some persons entertain respecting the "contractual obligations" entered into by the city with its bondholders. Neither of the parties to the contract ever contemplated the annual collection of more money than was needful for the sinking-fund, and no court will hold that the contract has been violated if the collections are fully sufficient for the purpose.

---

Judge Lambert deserves the high praise which has been accorded him for his conduct of the latest trial of the Molinuex case. He has got it to the jury in the merest fraction of the time consumed before. And his expedition has not been achieved at the cost of justice: the rights of the defendant he has scrupulously safeguarded. Nor has the prosecution been limited in its efforts to prove Molineux guilty, except as the rules of evidence and the decision of the Court of Appeals have been rigorously enforced by the presiding judge, to exclude irrelevancies and to prevent anything like a fishing excursion. Judge Lambert has, in fact, exemplified in the happiest way the Anglo-Saxon idea of the judicial character. Impartial as the light of day, and without one touch of the hectoring fashions of a *juge d'instruction*, he has been clear in his decisions, resolute in his interpretation and application of the law, the enemy only of verbosity and irrelevance, and relentless in compelling both sides to save time and come to the point. This wholesome lesson to trial justices in this county has been read by a country judge. Judge Lambert is a "hayseed." He comes from the *bête noire* of Mr. Coler, "up the State." Yet he is only typical of the class of men whom the rural voters are in the habit of placing upon the bench. The truth is, that they know more and care more about judicial fitness than do people in the city. The county and district courts still hold much of their old place in the life of the interior of the State. The leading lawyers of the local bar are watched and sifted in actual trial of their powers. They are talked about on the street-corner and in shop and home. Judges, too, in the nice points of their conduct of cases, are discussed and weighed as, it is safe to say, no occupant of the bench in this city ever is. The result is a finer sense of judicial qualification, a more ready jealousy in resenting anything like tampering with the judiciary or lowering its standards, and the election of judges who are, on the whole, of a robuster and a more athletic type, legally speaking, than their metropolitan brethren. A very striking proof of the countryman's sensitiveness about his judges was given in the defeat of Attorney-General Davies on Tuesday week, though President Roosevelt thought him just the man for a judgeship, and urged, not to say intrigued for, his nomination.

---

The shocking "accident" in Madison Square on election night should lead to a rigid investigation of the custom of permitting the use of the city parks for political celebrations. Quite aside from the danger to life and limb through the explosives and from the vast crowds which assemble in narrow thoroughfares, the parks and public gardens were never intended for any such purpose. They are for the recreation and health of the people, not for the celebrations of political parties or the display of election returns by yellow journals. On the occasion of the Hearst Congressional rally in Madison Square Garden, the other night, thousands of people trampled on the grass and swarmed over the Square until it looked as if it had been the stamping-ground of an invading army. In this case the abuse of the park was all the more disgusting since the entire circus was in the interests of a self-advertising newspaper proprietor and his noisy sheet—although under the guise of a Democratic rally. No matter what the object or who the backers of the demonstrations, the police and the park authorities should forbid all such meetings and celebrations. The crowds along Broadway were dangerously large throughout the evening, and a wise police administration would have taken every means to prevent such an alarming jam as in Madison Square. The Department must share the responsibility for the accident with the person who was so criminally careless in setting off the fireworks.

---

Canvassing for the next Speakership of the House seems a trifle premature, in view of the fact that the new Congress will not meet, unless called in extraordinary session, before December of 1903. The canvassing will doubtless go on, however, and "plays for position" will be made throughout the coming session. It is universally agreed that Speaker Henderson has been a great success in at least one respect—he has made it inevitable that his successor, whoever he may be, shall shine by force of contrast. Congressman Cannon is commonly thought to have a commanding lead for the succession, both from his long service and from his standing so peculiarly as the representative of the West which alone saved the Republicans their majority. If a cautious Speaker is wanted, averse to innovations and unfriendly to bold initiative of any sort, Mr. Cannon would seem to be just the man. He was understood to be opposed to the

ship-subsidy scheme. If that is a reason for making him Speaker, it would be a still stronger reason in favor of Congressman Burton of Cleveland, who was more courageous than Mr. Cannon and spoke out unequivocally against Hanna's pet measure, even though a representative of Hanna's city. Mr. Burton has also a long and creditable record of service in Congress, but we presume his occasional independence of party would be urged against him, as it would against Mr. Littlefield of Maine. Both of the last-named members would stand for a more aggressive policy than Mr. Cannon. This fact, however, as party caucuses go, would not help them to obtain the honor.

---

Professor Jenks of Cornell University has just submitted at Washington a report on labor conditions in the Philippines which is not precisely pleasant reading. He has no doubt that some form of the *corvée* system is necessary, and he suggests that gangs of Chinese be imported for terms of three or five years, and allotted to certain districts which they may not leave. The employers are to be put under strict bonds to treat these laborers well, and to send them back to China when their period of contract-servitude expires. The reason for adopting this form of temporary slavery is that the native supply of labor is insufficient and untrustworthy. We do not know whether the Government will bring itself to enact into law the modified form of slavery which prevails generally in the South Seas. If it does, there will not be lacking clerical apologists to point out that these Chinese are packed in ships and herded in gangs for their own good and for the greater glory of God. But we trust that we shall not return again to the cant of slavery times. Professor Jenks's report, which is presumably correct from the economic standpoint, should direct the public mind and conscience to the real conditions of empire in the tropics. Uncle Sam as a conquistador and pacificator does very well, but we are convinced that very few of his nephews will be glad to acclaim him in the rôle of slave-driver.

---

President Eliot put his finger on one of the ailing spots of trades-unionism when he said, on Monday, in his speech before the Economic Club of Boston, that some of its principles fought against both education and manly instincts. The aim of the educator is to call out the best that is in man. Labor unions hedge him about, check his skill, and forbid him to rise above a certain dead level either of competence or effectiveness. They make rules which are as so many doors closed in the faces of ambitious young men. By limiting the number of apprentices, they do their best to prevent the development of special aptitude, and then discourage it when it does appear. Nothing could be more fatal, judged by the laws of education and of evolution in general. And to make the standard of work as low as possible, to produce the least allowable and to demand the highest wages for it obtainable, can but result in a race of shirks and drones. Such was the tonic gospel of work which the President of Harvard laid down, not only as teacher but as citizen. In his mind it would be lamentable to have our working classes drop to the fatalistic temper which trades-unionism has done so much to implant in England. "We cannot rise from our class," says the British mechanic, "no matter what we do; so do not talk to us of attaining higher skill and better pay." It will be a deadened and discouraged America when that hopelessness prevails here.

---

The Education Bill drags out a very weary length in Parliament, progressing through committee at the rate of a few lines a sitting, and even so only through the application of the closure. The justification for these tedious proceedings is the fact that the clause now under debate determines the degree of control that the educational authority may exercise over the voluntary schools. Voluntary schools are those which have been previously maintained by a denomination (but, practically, only the Church of England schools are in question), from private funds, with the aid of a small Government subsidy. Under the Education Bill such schools are to provide and maintain their buildings free of charge, in return for which their running expenses are to be met from the public funds. These schools, however, are under a double control, which is very ill defined. In strictly educational matters they are responsible to the County or Municipal Council of the district, and to the central Board of Education. In religious matters, and as respects local management generally, they are responsible to boards of managers appointed on a basis of two representatives from the denomination to one from the community at large. The exact jurisdiction of the educational and that of the denominational authority remain vague, even after much debate.

---

It will we seen that the two authorities approach practical problems, such as the appointment of teachers, from a markedly different point of view. The County Council, for example, wishes simply a good teacher; the local managers will insist that the good teacher be also a high, low, or broad churchman, as the case may be. The compromise which has actually been made suggests trouble to come. No appointment of the managers shall be vetoed by the higher authority except upon educational grounds, and *per contra* the managers shall be free to dismiss a teacher upon religious grounds. Minor concessions to the Nonconformists, such as waiving trust stipulations as to creed in the case of subordinate teachers, and the opening of the voluntary schools, where necessary, for night classes, do not touch the main anomaly of the bill—that the local managers, virtually a private denominational committee, will have in half the schools of England a power which, in the other half, is exercised by a duly appointed public committee. In plain words, the arrangement virtually shifts the support of the voluntary schools upon the Government. The unfairness of the transaction is so apparent that Mr. Balfour, who obviously has his Parliamentary majority safely in his hand, will soon have to reckon with the people. The greatly diminished polling in a Liverpool Unionist constituency shows that even in his own party Mr. Balfour has a threatening opposition.

---

The meaning of the Kaiser's visit to England is variously guessed at by the press, but all correspondents agree that the royal kinsmen are perfecting important negotiations between their respective nations. Journalistic warnings to fear the Germans even when they bear treaties seem beside the mark, for the German Foreign Office is in no position to offer reciprocal terms of trade. Whatever is on foot at Sandringham, one may fairly assume, concerns not trade, but territory. There are two points at which the relative holdings of Great Britain and Germany obviously need adjustment—China and Southeast Africa. In China Germany has just taken the initiative in recommending the withdrawal of the foreign detachments, an act which must have been very gratifying to Great Britain. In Parliament recently the versatile Mr. Gibson Bowles forced the Under-Secretary for Foreign Affairs to a tacit admission of the existence of a secret treaty with Germany concerning South Africa. Viscount Cranborne's rather awkward evasion of the question tallied accurately with the rumor that Great Britain held an option of purchase on the southern portion of Portuguese East Africa. And now the inclusion of two Portuguese naval officers among those decorated on the King's birthday reminds one of the care which is taken to gild an awkward transaction with extraordinary amenities. Such a redistribution of the territory below the Zambesi would gratify German pride and further British interests, while the East African would probably feel none the worse for the change of sovereignty. The frank avowal of such an intention would do much to allay that popular suspicion of the Kaiser's motives which is unhappily at variance with the warmth of his official reception.

### *THE ROAD TO DEMOCRATIC RECOVERY.*

One lesson of the late elections is written large on the face of the returns: the Democrats have not regained the confidence of the country. More narrowly, there remains evident a distrust of Democratic leadership. The Democratic policies give signs of winning their way again, but all the would-be party leaders of the hour have been dealt terrible blows by the electors. Even Bryan's volubility is quenched under the cold douche of both Nebraska and Colorado gone Republican. His fellow-charlatan in Ohio has folded his tent like the Arab. In New York, Hill's offensive personality was the obvious and agreed cause, ultimately, of Democratic defeat. If Judge Parker had been nominated instead of Coler, and if, in his judicial capacity, he had sentenced Hill to silence and effacement during the campaign, there is no doubt that he would have been triumphantly elected, and would have been to-day hailed as the coming nominee for the Presidency in 1904. There never was a clearer case of a vicious and abhorrent leadership wrecking a party's fair prospects.

Now the truth which the disappointed and sobered Democracy must take to heart is, that an exceptionally high leadership will be demanded of it under present circumstances. What would have been regarded as passable or excusable in other years will not do now. The party is very much in the position of a man who has been running a round of dissoluteness for some years, and suddenly professes a determination to reform. This will, of course, interest all his friends and well-wishers, but they will be sure to keep a sharp eye upon him to see how he behaves. They certainly will not admit him to their houses the very first day after he has shaved and cleaned up. He will have to win his way back to respect and confidence by a steady course of decent living; and if he is caught occasionally dropping into one of his old boozing kens, all his virtuous pretences will go for nothing. Reform is a good thing to promise, but where are the fruits meet for repentance?

For six years the Democratic party has been playing the political drab. It has sinned grievously, and driven away thousands of its best supporters. Many of them have now formed the habit of voting the Republican ticket. Forced first to do it by way of protest, and much against their will, they have kept it up year by year, until to-day it requires an unusual effort and a powerful attraction to win them back to their old allegiance. Emerson used to say that he preferred to vote with the Democrats but to live with the Whigs. Changing the name Whigs for Republicans, that attitude exactly corresponds to the position taken by great numbers of our best citizens for many years. Their political convictions were with the Democrats; their friendships and social affinities were with the Republicans. But now they have been preferring to vote with the Republicans for several elections, as well as to live with them. That is the situation which puts the Democracy to its trumps.

Yet what are we witnessing at this moment? Nothing less than the spectacle of obnoxious and defeated machines preparing to make themselves still more obnoxious and to incur new disasters. Look first at Ohio. In that State, Tom Johnson has just undergone a more emphatic and pointed rejection at the polls than any Democratic leader has suffered since Vallandingham. But what does he propose to do? Take his hand off the lever, retire, be silent, and give place to a worthier? Nothing of the kind. He announces his determination to perfect his control of the party machine. His hold on the Hamilton County organization had not been absolute, and his next step is to make himself supreme in party management in Cincinnati. The idea seems to be that, if the voters show signs of being disgusted with too much Johnson, the proper move is to give them still more of him. Then, perhaps, next time the majority against him will be 150,000, instead of the mere 100,000 of this year.

What is going on in this State is fully as instructive. The Hill machine was the admitted cause of the defeat of the Democratic party. It is demonstrable that the intense hostility to Hill changed enough votes to prevent Mr. Coler's election. But what is the discarded boss going to do with himself and his machine? Beyond all doubt he has already begun plotting to make himself more absolute dictator than ever. If the machine he had built up was like chastising the voters with whips, he will give them one that will be like chastising them with scorpions. Your true boss's remedy for machine methods is more, and more outrageous, machine methods. Lieut.-Gov. Woodruff announces that he means to follow that plan in Brooklyn. The antics of his organization in Kings County have confessedly repelled thousands of Republican votes. Coler's immense plurality in Brooklyn was a stinging blow levelled at the Woodruff-Dady machine. Yet all the talk of the defeated and discredited machine leaders is about the need of strengthening their power and making the clank of their political machinery more odious than ever.

The explanation is, that the machine has come to be thought of as an institution to be justified and upheld quite independently of success in the aims for which it was ostensibly founded. What it is really maintained for is the personal ascendency of men in control of it, their ability to dictate nominations, and the recognition of their power on 364 days of the year, even if on the 365th—election day—they are shown to have no power at all except to wreck their party. Studied as men with these ends in view, the bosses are seen to be as shrewd as they are selfish. But considered as aids to their party in elections, they are the absurdest of misfits, a demonstrated nuisance and calamity.

A clean, strong, inspiring leadership is the great Democratic need of the hour. The issues stand waiting. A cause is prepared for which thousands are ready to fight devotedly. But they scan the field eagerly and in vain for a sight of that commanding figure, that political genius, that compelling character, who is able to unite the scattered forces, and to wield them as a great instrument for the country's good. Were ex-Gov. Russell of Massachusetts alive to-day, how the eyes and hopes of the nation would be turning to him! How the Hills and the Gormans would wriggle off the scene before him! And nothing is more certain than that some man of his type and temper must be found and put at the head of the Democracy before it can fairly be said to be on the road to recovery.

---

### *THE INDEPENDENT VOTE OF NEW YORK CITY.*

One year ago a candidate for Mayor in this city, nominated by the Republican party and numerous independent organizations, carried Greater New York against Tammany Hall by a plurality of 31,632. This year, candidates presented by Tammany and the Democrats have in turn swept the city by the enormous plurality of 122,005. These are truly startling figures; and two of the parties to the election of a year ago have been quick to seize upon them for their own purposes. "Tammany is invincible, the Democracy is reunited," cry the Sullivans, the Plunkitts, the Murphys, and their kind. "Mayor Low has refused to give us jobs and places, and has wrought the ruin of his party in this city," shriek the Quiggs, the Ten Eycks, and the Gibbses, seeking an excuse for the overthrow of their political machine. Everybody knows, however, that the Democrats of Greater New York are fighting bitterly, even desperately, among themselves; and everybody knows also that, so far as his position as Mayor is concerned, Mr. Low has no party with whose ruin or advancement he can have anything to do.

The jubilations of the Sullivans and the Murphys are as hollow as the recriminations of the Quiggs and the Gibbses. Croker's disappearance may have brought back a few votes to Tammany, and undoubtedly dissatisfaction with Mayor Low has alienated many Republicans; but this does not account

for a Democratic gain of 153,637 in the city. Those figures mean that 76,814 voters who cast their ballots against Tammany candidates a year ago, supported such candidates at the polls this year. Who made up this large body of voters, to what class or classes do they belong, and why did they change? These are questions of the deepest moment. For our part, we do not believe that the election just passed indicates that the people are ready to return to the corrupt and humiliating rule of Tammany Hall. We do freely concede that a good many persons chose a year when they could do so with comparative safety, to slap at the local reform administration; but in the election returns as a whole we read a very different and a less discouraging lesson.

Mayor Low's total vote a year ago was 296,807. As soon as the election of 1901 was over, the Republican managers announced that their organization had contributed 84 per cent. of that total. In other words, they asserted that the voting strength of their organization one year ago in the greater city was 249,318. Yet, despite a year's natural increase in voting population, "unbounded prosperity," and generally unobjectionable candidates, they can now muster but 202,559. Allowing for the normal gain in the voting population, here is a discrepancy of about 50,000 which the Republicans must account for, unless they are ready to admit that their estimate a year ago was grossly exaggerated and absurd. The fact is, that they cannot account for this discrepancy, and that, whether they admit it or not, their 84 per cent. claim has been completely demolished by the result this year.

All the explanations of this year's voting, noted above, proceed without reference to the existence in this city of a truly independent vote of large proportions. How the reality of such an element can be disregarded in the light of election figures of recent years passes understanding. In 1897, Mayor Low, running as the Citizens' Union candidate, polled 151,540 votes; Gen. Tracy, the Republican candidate, polled 101,873. This makes a total anti-Tammany vote of 253,413. In 1898 the total vote for Mr. Roosevelt, the Republican candidate for Governor, was 200,252. Here again is a difference of more than 50,000 anti-Tammany votes to be accounted for. Of course, there is but one possible explanation. The fact is absolutely clear that there is in this city a vote, amounting to probably 75,000, which is but lightly, if at all, attached to any party. It is a vote which baffles the politicians because it is cast silently and without ostentation. This body of electors does not hold meetings, burn red-fire, or employ a band. It makes up its mind quietly and calmly, and goes to the polls determined to do what it considers to be duty, without reference to any partisan gain or loss in the result. It looks at political questions chiefly from their moral side. It is merciless in its condemnation of fraud, injustice, pretence, or truckling. It is the element which the politicians never take account of, because generally they cannot understand it; yet it controls elections in this city.

This vote was not cast for the Republican ticket this year. It had been affronted by the attempt of Republican politicians to interfere with the judiciary; it shrank from endorsing a Governor who, however he came to own it, owned stock in a company selling supplies to the State; it was out of patience with the timidity of the local Administration, which hesitated to move on boldly and fearlessly to the accomplishment of the reforms in the Police Department and elsewhere which it was put in power to achieve. This independent body of voters demands that public men exhibit in public affairs the same qualities of honesty, courage, scrupulousness, capability, and moral worth which are ordinarily required in private life. It is never taken in by scheming. If those who are to lead in next year's contest to keep Tammany out will remember these things, there is no reason to be cast down over the situation.

## *THE OFFICERS OF THE NAVY.*

From present indications it is evident that a great effort will be made to bring about a large increase in the number of naval officers during the coming session of Congress. Secretary Moody, it is known, is very anxious to throw all the influence of his Department in this direction, and is willing to make his demand for new ships less insistent than that of his predecessor. President Roosevelt is reported, however, to be in the mood for plenty of "real fighting" ships to carry out a naval programme which shall make the United States "one of the foremost naval powers." They must be seagoing "battle-ships of great range of action" and extremely powerful batteries, and superior, of course, to those of any other nation—all new battle-ships are, until the next ones are built, which is generally a question of months only. Our fighting President is eager for more officers, too, but he thinks the demand for them should not precede that for new ships, but go "hand in hand" with it.

In the magazines and the press a quiet campaign for more officers has been going on for months past. Every resignation or retirement announced at Washington is coupled with the statement that it is due to overwork, and the number of recent deaths of officers has been attributed to the same cause. Favorable editorial comment on the general proposal has been secured by industrious writing of letters to editors, and particularly by the publication of elaborate tables showing that when the new ships now under construction are completed, 783 more officers will be needed, and that by July, 1905, the navy will lack more than 1,000 officers, although Annapolis will have furnished about 355. These figures were also given out by Secretary Moody in a recent speech at Chicago.

The whole question has, in fact, been reduced to a ratio of officers to tons. For every 1,000 tons of our war fleet we should have, it appears, three officers, and the slightest falling off in that respect is, we are assured, "exceedingly serious." The author of this phrase and of this admirable ratio corrects himself on the next page of his article by declaring that "to say that this is a serious state of affairs does not reach the outskirts of the situation. It is nothing less than astounding," he continues; "and it is worse, because the people are absolutely ignorant that such a condition exists. Are we to fall down helpless, or are we to accept the situation and stir ourselves to meet it? . . . Surely, now that the truth about this matter has been made clear, the American people will not sit idle and see an institution in which they take a just pride exposed to the risk of a humiliation that will be national, if it should come." The remedies suggested by this writer—a naval officer—are the education of 2,000 midshipmen at Annapolis instead of 500, and the formation of a patriotic "Navy League," like similar organizations in Germany and England, to keep the people informed as to the needs of the service.

Now, all these arguments are of importance if it can be proved that the United States really needs a large navy, and is menaced by such grave and imminent dangers that every ship we build must be kept at sea, fully manned, and ready to go into action. Not even England undertakes to keep all her warships in service or with their full complement of men. As in Germany and in France, many vessels are laid up at the navy-yard ready for active service, but with only a few caretakers on board. In war time they are to be manned by reserve officers and men. If the United States is going to depart from all its best traditions and rival these European nations, it must certainly build up a large naval reserve capable of going to sea at a moment's notice, for such a reserve is the most economical arrangement, and permits many thousands of men to contribute to the industrial development of a country, except during periods of drill.

We do not believe that the United States will come to this, or that the American people are anxious for the creation of a great war fleet at an extravagant cost, at the very time when every humane and civilizing impulse in Europe is in the other direction. We

agree with Mr. Carnegie that her swollen fleets and armies are the greatest menace to Europe's industrial life. For the United States deliberately to handicap itself in a similar way would argue unparalleled stupidity and shortsightedness. It would be all the more inexcusable in view of the fact that this country is menaced by no foreign enemies, and will not be unless it seeks trouble, as it did in 1898—especially as it has gone in for an elaborate system of land fortifications at enormous expense. The bogey of a war with Germany over South America having been disposed of, our most belligerent Imperialists have no other impending national danger to bring forward.

This game of getting more ships for our officers, and then more officers for our ships, has been worked long enough. Our navy is more than sufficiently large for police duty in foreign waters and for coast defence in the remote possibility of our being attacked. The ships now under construction more than insure the replacement of worn-out vessels. Instead of increasing the navy, we believe that Congress should decline to authorize any more officers, or men, or vessels. The danger signals upon our financial horizon which Mr. Vanderlip pointed out so ably the other day, if read aright, warn also to economy in national expenditures. The Republican Administration has pointed the way by reducing the army to the smallest number authorized by law, while the recent elections indicate clearly a growing return to sanity after the war debauch of 1898 and 1899. The time is ripe for men and parties to return to the policy of a small navy and army, under which the country has waxed great and strong throughout its history without detriment to national security or honor.

### *ANOTHER CHANGE OF POLICY.*

It was announced in Washington on Friday that Secretary Shaw had revoked the order which he made on the first of October, allowing "other satisfactory security" than United States bonds to be taken for Government deposits in banks. It is understood that about $17,000,000 of such deposits have been made on such other security, chiefly municipal bonds, and that the Treasury has reached the limit of its power to "bring relief to the money market by such deposits." This new change of policy, for so it will be regarded, will not add anything to the Secretary's reputation as a man knowing his own mind and sure of his footing. It is safe to say that Mr. Gage would never have made the ruling of October 1, but if he had made it he would not have rescinded it on the 7th of November. Nor would he have coupled the ruling of October 1 with a requirement that the banks putting up municipal bonds as security for deposits should take out an equal amount of circulating notes on the security of United States bonds. The latter requirement was not helpful to the Secretary's main purpose of relieving the money market, although it might seem so to a superficial observer.

Meanwhile, the Secretary's order of October 1 has been the subject of a good deal of comment in business circles. At a meeting of the Chamber of Commerce on Thursday, Mr. Jacob H. Schiff made some remarks on current conditions in the money market, in the course of which he advanced the opinion that some of the recent acts of the Secretary of the Treasury might have serious consequences. Being asked by a reporter what particular acts he had in mind, Mr. Schiff said that he had special reference to the Secretary's construction of the words "and otherwise" in the law relating to the collateral security for Government deposits in the banks. Continuing, Mr. Schiff said:

> "He has construed these words to mean that the banks may put up municipal bonds against the Government balances. This seems to me a dangerous precedent and a serious misinterpretation. A less able and less wise man than Mr. Shaw might, in time to come, with the present Secretary's precedent to guide him, allow the banks to deposit railroad bonds as collateral, and, if railroad bonds, why not farm mortgages? Why, if Mr. Bryan or one of his stripe should be elected, his Secretary of the Treasury might elect to accept warehouse receipts. The law in question was passed during the war, and those two words, 'and otherwise,' mean that the Secretary of the Treasury might take *additional* security, not other security. The law does not read 'Government bonds, or otherwise.' Mr. Shaw's interpretation may have serious consequences because it opens the way for the abuses I have pointed out."

We agree to all that Mr. Schiff says in the foregoing paragraph, but we do not apprehend any loss of money to the Government in consequence of the Secretary's disregard of the law in this particular. Another law gives the Government a paramount lien on all the assets of national banks for any dues to itself, and this provision would undoubtedly protect the Government even if no collateral security whatever were taken for deposits. It is safe to assume that the Secretary will exercise as much prudence is placing his deposits as a private individual would in handling equal sums of money. Now if Mr. Carnegie, or Mr. Rockefeller, or Mr. Schiff were secured, when placing money on deposit in banks, in the same way that the Government is, so that in case of the failure of a bank they could exhaust the entire assets and the stockholders' liability before any other depositor could get a penny, is it imaginable that the persons so favored would ever lose anything by a bank failure? Assuredly not. The requirement of Government bonds, or municipal bonds, or farm mortgages, or warehouse receipts, or the I. O. U. of Wilkins Micawber, is alike unnecessary.

The possible harm to flow from the Secretary's action will come through a different channel. It will result from a growing contempt for the law of the land; and this, if countenanced by the highest officers of the Government, may break out anywhere, and may take the most unexpected forms. It is not open to doubt that the act of Congress governing deposits of public money in banks makes one kind of security indispensable, and that is United States bonds. Security may be taken in addition to it, but not in substitution for it. This has been the interpretation of the law by every Secretary since it was passed, until now. Such was the interpretation given to it in Congress when it was under debate. Such was apparently the interpretation of Secretary Shaw himself only a few days before he announced the new rule.

It will be the duty of Congress, early in the coming session, to inquire in courteous terms why this uniform interpretation of the law regarding Government deposits in banks has been changed. A debate on this question would be altogether wholesome, and would probably deter any other Secretary from overstepping the limits marked for him by Congress, and serve as a warning to other officers of the Government not to take such liberties. It would be a wise step, also, for Congress to inquire how the Secretary came to change his mind so suddenly after announcing that no proposition would be considered for taking other security than United States bonds for Government deposits. Such inquiries cannot be considered disrespectful to the head of the Department. Congress addressed a similar inquiry to Secretary Boutwell when he paid out a few millions of greenbacks that had been redeemed and cancelled in pursuance of law by Secretary McCulloch. The motives of Mr. Boutwell were not questioned in that case, nor are those of Mr. Shaw impugned in any degree now.

### NEW LONDON AND ITS WAYS.

LONDON, October 11, 1902.

When the Campanile fell in Venice last summer, a loud outcry of indignation was heard in London, and Young Italy was warned that, if it could not preserve its own great monuments, the rest of the civilized world would have to step in and take them in charge. But the regular and approved system of vandalism that is going on quietly in London, promises eventually to prove as disastrous in its consequences as Italian indifference and neglect. Since the County Council has been managing municipal affairs, there has been a continual pulling down and rebuilding, until the chances are that in ten years or so London will be practically a new town. A few of the old buildings, like Westminster Abbey and St. Paul's, will no doubt be preserved—in an unpicturesque state of repair, as neatly classified and prepared for the tourist as the Forum and Baths and Tombs in Rome. But the rest of London will be but a tribute to the

mistaken "progressive" zeal of County Councillors. It is true that sometimes the pulling down and sometimes the rebuilding are necessary, but the late scheme for erecting a Town or County Hall on the Adelphi site shows the utterly thoughtless and vandalistic spirit in which these so-called reforms are undertaken. The scheme, fortunately, was defeated in (as one of the London papers puts it) a sudden access of common sense on the part of the Council. But it is typical of what has been done, what is being done, and what will be done.

That the Council must have a County Hall, few intelligent people will deny, though it might be remembered that the British Government still has a Parliament House so small that if all the members of Parliament were to take the trouble to turn up, many could not even get in. The County Council has outgrown the building in Spring Gardens which it inherited from the Metropolitan Board of Works, and various departments are now lodged in offices scattered throughout the neighboring streets. But that, to secure a hall for itself, one of the most beautiful and complete pieces of domestic architecture in all London should be destroyed, and this, too, at an enormous expense, is quite another matter. After Inigo Jones and Wren, England has had no more distinguished architects than the Adam Brothers. Robert Adam was an artist of distinct originality, though his inspiration was classical. He developed a style of his own, and was strong enough to impose it upon the architects of his day. He had not the great opportunities of Inigo Jones and Wren—his work was confined to domestic architecture; but in this he triumphed. Mansions still survive here and there in the country to testify to his genius; he is also to be studied in some of the spacious houses of Portland Place, familiar to every American who stops at the Langham Hotel; but he never did anything finer in its way and more completely rounded out than the row of houses on Adelphi Terrace, above the Embankment Gardens, overlooking the river, near Charing Cross. And all the surrounding quarter, known as the Adelphi, is full of his work—houses with doors and windows that architects and students come from far to copy, and ceilings and fireplaces that have become models for the decorator.

I say nothing of the memories clinging about all this quarter, in the very names of the streets—Robert, John, Adam—called after the brothers, and, to go further back, after the Duke of Buckingham of ill fame; in the record of tenants—from Lord Bacon to Pepys and Dr. Monroe, Turner's friend—who have lived in this little quiet corner, and succeeded each other in its beautiful old houses and chambers. These would be purely sentimental reasons that carry no weight in politics. Nor do I find that the architectural plea weighed with the Councillors. Only one or two made the sacrifice of Adam's masterpiece an argument against the scheme, and they were assured by an ardent Progressive that, if that were all, matters could be set straight by building the new hall "in the Adam style"!—a remark that gives the measure of the average County Councillor's intelligence where art is concerned.

If sentiment and fine architecture alone had stood in the way, I am afraid that already the hammers or pick-axes of the destroyer would be heard in the Adelphi. But, luckily, the financial side of the question had to be faced; £900,000 was the price of the site as it was before the first old brick had been thrown down or a new cornerstone laid. Economy has not as yet proved the failing of the Council, but, with the most extravagant municipal body, there comes a moment when the rate-payers cannot be ignored. It is too soon to forget the heavy debt with which the new street has burdened the municipality, and the more sober Councillors stopped to ask what they were going to get for their money. And at once the absurdity of the whole scheme became manifest. For, if the Council finds it must have a new hall, and is willing to pay for it, every one must agree that this hall should be given the dignity, and even splendor, befitting the headquarters of the rulers of the largest and wealthiest capital in the world. But, on the Adelphi site, a County Hall would be totally invisible from the north, the east, and the west; on the east side, curiously enough, overshadowed by the Hotel Cecil, the building which, before it was turned into a hotel, was offered to the Council and promptly refused. Though but a stone's throw from the Strand, on the north, the hall would have no entrance upon it unless, as has been whispered, the scheme should later on have been found to embrace a Strand frontage at an additional enormous outlay; though overlooking the Thames on the south, it would have no direct approach from the Embankment, unless, as also is likely, provision has been privately made for ripping up the Embankment Gardens and building an imposing entrance on the river front. In a word, £900,000 would have been thrown away on an insignificant site—insignificant, that is, for the purpose—buried in a series of back alleys and *culs-de-sac*. It is no wonder that the Council's critics have been asking what lay beneath it all. It is the sort of scheme in which, at home, honest men would immediately suspect a job.

The whole movement is the more inexplicable because, when the new street from Holborn to the Strand was first projected, the idea was to reserve the space at the southern end, where the avenue is some day to open into a wide circus, for the Town or County Hall. Here, indeed, it might have been erected with becoming magnificence, and something of that respect for order and design which in modern Paris has helped to reconcile one to the loss of the old town. When a certain number of architects were commissioned to prepare plans for this street and circus, the County Hall was an important and central feature in almost all. But, for some unknown reason, after the architects had been well paid with the rate-payers' money, no more was heard of the competition, and, according to the present plan, the new avenue, at its southern end, is to be flanked on one side by Short's, a well-known public house, on the other by the Gaiety Theatre, a sort of music hall.

Again, while the public was being assured that such a fine site as the Adelphi, at £900,000, was a wonderful bargain, to be grabbed at once before the price went up, as it was sure to, the suggestion of a still finer site at the southeastern end of Westminster Bridge, to cost £150,000 less, was dismissed, apparently, as not worth discussing. And yet here also the County Hall would have commanded the river, and, moreover, have been within a few minutes of the Houses of Parliament and almost all the Government offices—without question a consideration, since so much of the Council's business is connected with that of the state. Another suggestion, recently made, but outside of the Council, has also its advantage: the triangle, which every one who has been to London will remember, formed by Trafalgar Square, Cockspur street, and Pall-Mall East, a site in the very centre of London, the very heart of the Empire, which, if in any other capital in the world, would long since have been filled by a building of public importance, instead of clubs and shops and private offices. For the moment, however, the matter seems to have been laid aside that the Council may turn its attention to the underground railroads of London and save them, no doubt, from the rapacity of the American company promoter, who threatens to run the entire metropolis—if not all England—for his own profit. But one thing is sure. If the public, in a patriotic outburst, supports the County Council in opposition to Mr. Morgan and Mr. Yerkes, it will have to pay for the privilege of patriotism. To compete with private enterprise in order to save public money has no place on the programme of political "progressives."

Indeed, it is the growing extravagance in municipal government that is so discouraging. The Borough Councils, in the first flush of their new power, are even more reckless than the County Council. In the City of Westminster, which happens to be my borough, the rates—that is, the local taxes—have increased all but four pounds within the year, though for ten years previously they had varied but by a few shillings. And yet the street in which I live, and a great many others, are kept in a state that would disgrace a Spanish village or an Italian hill-town. There is nothing to show for the money except the vulgar coronation decorations last summer; a few sand-boxes; a series of street-signs (white panels with black and red lettering, neatly and inappropriately framed, already grimy in the thick London atmosphere); and another series of absurd notices, hung up on the street-lamps, directing pedestrians to keep to the right—and of no possible use to anybody, except on those rare crowded occasions when a handful of police can regulate the traffic a great deal better. And what goes on in Westminster is going on, in varying degrees, all over London. Extravagance is the order of the day. The County Council's action in the matter of the Adelphi is simply characteristic of the modern tendency. But it seems better than most of its measures as an example, because, while so little, if anything, was to be gained by the wholesale squandering of public money, so much was to be lost.

## MADAME DE KRÜDENER.

PARIS, October 22, 1902.

The name of Madame de Krüdener appears but for a moment in French history. In all the accounts given of the invasion of 1815, she is represented as having exercised some sort of mystical influence on the Emperor Alexander, who, with his brother sovereigns and allies, held for a time in his hands the fate of France and of the dy-

nasty of the Bourbons. But little is known of her, and M. Joseph Turquan has tried to satisfy our curiosity with regard to this extraordinary person. He has entered Madame de Krüdener in his already long series of "Souveraines et Grandes Dames." M. Turquan cannot be called an historian in the strict sense of the word; he is content to collect original documents; he makes use even of the gossip which is found in newspapers and of accounts given of past events by more or less credible witnesses. He is not a critic, and his judgments are too often inspired by his personal prejudices; as, for example, in his book on Madame Récamier. He knows the value of a catching title, as is shown in his present volume, styled 'Une Illuminée au 19e siècle: La Baronne de Krüdener, 1766-1824,' and made up from the accounts of her contemporaries, from letters and inedited documents. M. Ch. Eynard had already published in Geneva two big volumes on Madame de Krüdener; but they have never fallen under my eye, and M. Turquan says that they are very rare and can no longer be found. Sainte-Beuve did not neglect Madame de Krüdener, but his account is far from exhaustive.

Barbe-Julie von Wietinghoff was born at Riga, in the cold province of Livonia, where she spent all her early years (the date of her birth is uncertain, but it was probably 1766). Her father was a rich landlord; two of her ancestors had been grand masters of the Teutonic order. She was taken by her parents, when she was a girl, to Spa, and afterwards to Paris, where she remained during the winter of 1777-1778. On her return, she was married at the age of eighteen to Baron de Krüdener, a diplomat, who had already been married twice. In 1784, she had a son, Paul, and soon afterwards left for Vienna, where her husband had been appointed Ambassador. She was twenty years younger than he; he seems to have been very cold and pedantic, and she was quite the reverse. She stayed a long time at Venice and adopted the Italian manners of the time, as they have been depicted by Stendhal. She never appeared except escorted by a staff of elegant young men. She became at Copenhagen the mistress of one of her husband's attachés, and her adventures soon became so public and so numerous that a separation took place between her and her husband.

She went to Paris, where she arrived in the month of May, 1789, at the time of the meeting of the States-General. She has traced a portrait of herself at the time in a novel called 'Valérie,' which was published many years afterwards.

"Valérie has something peculiar which I have not yet seen in any other woman. It is possible to have as much grace, much more beauty, and to remain far from her. People don't admire her, perhaps, but she has something ideal and charming which forces attention. One would say, on seeing her so delicate, so slender, that she is a soul. However, the first time I saw her, I did not find her pretty. She is very pale, and the contrast of her gayety, of her lightness, and of her face made to be sensible and serious, produced on me a singular impression."

In Paris she became acquainted with M. Suard, an academician (well forgotten now, like many other Immortals). She had found Baron de Krüdener too old, but accepted the attentions of Suard, who was twelve years older than the Baron. She threw herself into his society, became acquainted with Bernardin de St. Pierre, the author of 'Paul and Virginia,' and the Abbé Morellet. Suard took a wife at the age of fifty-two, not without having obtained the permission of Madame de Krüdener. She soon consoled herself, and on a journey in the South of France made at Montpellier the acquaintance of a handsome lieutenant of dragoons. She returned to Copenhagen under his protection, and announced herself to her husband as fleeing from a country where the Revolution was raging. Baron de Krüdener was weak enough to allow her to come back to his house, where she had the impudence to bring her lover, the officer, as a sort of secretary. This was more than Baron de Krüdener could bear; he sent his wife back to her parents at Riga. The French officer returned to France; though he was a nobleman, he remained and fought in the Republican army. He became a general under the Consulate.

In 1793, Madame de Krüdener went for her health to Berlin and Leipzig, in the latter city making the acquaintance of the brilliant Count de Tilly. We have a letter of hers, written from Leipzig, addressed to Bernardin de St. Pierre, which was reproduced in the complete works of the latter. In it she describes all her sufferings, and tells of her future plans of life. She speaks in it of her children, of her son, of her little girl, whom Bernardin de St. Pierre used to call "Her Beatitude." Krüdener was appointed ambassador to Berlin, and his wife joined him there; she had for a time a salon where she received Count de Tilly; the Chevalier du Boufflers and his friend Madame de Sabran, to whom he had recently been married at Breslau; several French *émigrés*, among others M. de Chênedollé, well known afterwards by his great devotion to Chateaubriand; and Rivarol, the pamphleteer. Her restless mind was not satisfied in Berlin; her ambition was to return to Paris, and her health became again a pretext. She made several stops on the road—at Teplitz, where she took the waters; at Lausanne, at Geneva; at Coppet, where she paid a visit to Madame de Staël. When she arrived in Paris she found it in that turmoil of pleasure which followed, under the Consulate, the Reign of Terror. Madame de Krüdener naturally took her place in the new society; she became the mistress of the singer Garat, who was all the fashion at that time, the "incroyable des incroyables." This liaison did not last long, and Madame de Krüdener was soon ashamed of it. In her last letter to Garat, she says: "It was not you that I loved; it was a phantom created by my imagination. . . . I see you now as you are, and I must confess that I never loved you."

Krüdener died at Berlin from an attack of apoplexy; his wife lived in retirement for a short time at Lyons, but soon resumed her ordinary life, under pretext of showing the world to her daughter. She was seen again dancing the "shawl dance," which has been described by Madame de Staël. But she wished now for something more, she wished to have a literary reputation like Madame de Staël, and wrote the novel 'Valérie.' I doubt if any person nowadays reads 'Valérie'; but Madame de Krüdener enlisted all her friends in praise of it, and she herself took great pains to spread it and recommend it to the public. She wrote what we call "réclames" (puffs), which were inserted in the press. She was a precursor in that line, and had an advertising agent. "All this," justly says Sainte-Beuve, "is neither delicate nor handsome." She writes to a friend: "I thank you for your verses; they are charming. Could you not, through your relations, get some from the *grand faiseur Delille*? [Delille translated Virgil into French verse.] Never mind the contents; they would be useful to Sidonie [her daughter]. You know how much I love her; the world is so stupid!" The success of 'Valérie' was great. People compared it to 'Werther'; hats were made "à la Valérie." Madame de Krüdener thought she had reformed the public. Forgetting her own life, she writes on the 15th of January, 1804, to her former lady companion: "The success of 'Valérie' is complete and unheard-of. There is in it something supernatural. Yes, my friend, God would have it that these ideas, this purer morality, should be spread in France, where they are less known."

She was entering now on a new phase; she was becoming an apostle, a preacher. She sent her book to Bonaparte; he threw it away, and returned not a word of thanks to the author. Thinking that the volume had been lost, she sent a second copy, magnificently bound. Bonaparte noticed the binding, glanced over the book, and said to his librarian: "It seems that Madame de Staël has found her *Sosie:* after 'Delphine,' 'Valérie!' A worthy pair! The same pathos, the same *bavardage.* The women will be pleased with this sentimental extravagance. You may advise this mad Madame de Krüdener, from me, to write her books henceforth in Russian or in German, so as to deliver us from this insupportable literature."

Madame de Krüdener never forgave Napoleon. She left Paris, and we find her back in Riga in June, 1805. Her life, so unedifying thus far, took a new direction: she became excessively pious. Her religion took a mystical form. It was at this period that she entered into relations with Queen Louise of Prussia (after Jena and Auerstaedt). She spoke to her of the misfortunes of Prussia, and of the Russian armies which were marching against Napoleon. She used the figurative expressions of the Bible, and there is no doubt that the unhappy Queen fell somewhat under her influence, and accepted her consolation and words of hope. Madame de Krüdener visited the Moravian brethren, and at Carlsruhe she became acquainted with an oculist, Jung Stilling, who pretended to have direct communication with God. She was well disposed to adopt illuminism; she had trances, and lived for a time in Stilling's house. She visited in Alsace Oberlin, a holy man who had christianized populations in the Vosges that were almost pagans before he lived among them. She was looking in every direction for extraordinary religious characters, but it did not prevent her from cultivating and increasing her worldly acquaintances.

She had a correspondence with Mlle. de Stourdza, a lady-in-waiting of the Empress of Russia. In a letter written on the 27th of October, 1814, she predicted, in the figurative language of the prophets, the downfall of the Bourbons, who had just been restored: "The storm advances; those lilies which the Almighty had kept, emblem of a pure and fragile flower which had broken

an iron sceptre, . . . have appeared only to disappear again." These letters were shown to Alexander, who was much struck by their prophetic language. He had himself a great tendency towards mysticism. He wished to see Madame de Krüdener. She met him just after the landing of Napoleon at Fréjus, when Alexander was on his way to Vienna. When she left the Emperor, he was conquered; she had foreseen everything; she had the secrets of God. After Waterloo he asked her to join him in Paris, and as soon as she arrived he called upon her; he saw her afterwards every day. Had Madame de Krüdener anything to do with the wording of the extraordinary Act of the "Holy Alliance"? The Emperor Alexander held the pen; was she the moving spirit? The style of the Act would almost justify the affirmative.

We must leave Madame de Krüdener here. The Allies once gone, she fell back into her usual life of worldly agitation, intermixed with politico-religious conversations. French society never wholly adopted her; her ill conduct had been too notorious, her literary merit was too small. She died in the Crimea on the 25th of December, 1824.

# Correspondence.

## THE MAIN QUESTION.

To the Editor of The Nation:

Sir: I have been greatly interested in your weekly comment and editorials on the coal strike. You have devoted a great deal of space to wholesale condemnation of Mitchell and his followers, but I have looked in vain for any word of enlightenment as to the proper course to be pursued by any body of workmen who, by peaceful methods, have sought redress for grievances, or made demands for a more equitable share of what they help produce, and have failed to obtain satisfaction. You ridicule trade unions and their "windy spouters" of leaders. In what other way shall labor protect itself?

It quite often happens that workmen have real grievances. The *Nation* has grudgingly admitted some to the miners. Their demands for a larger share of what they produce, either by increased pay or shorter hours, are sometimes just. When these are denied, what then? When good, conservative workmen (there are some, you know) have tried to get a hearing for their grievances and have been met with a refusal which is none the less unsatisfactory because it is courteous, what should be their course? Grin and bear it? Are workmen to be compelled to accept every condition which an employer chooses to impose? Do you not know there are employers of labor who would grind the life out of a man if they were not kept in check by fear of an organization which could hurt their business by refusal to work and by keeping others from doing so?

I am a non-union workman; I am no sorehead. I have been working for seven years for a very fair firm in a good trade, and receive first-class wages. The firm I work for is insured in an accident insurance company. Should an employee be injured in the performance of his or her work, the case is turned over to this company. If the accident is a slight affair and unavoidable, or not due to the negligence of the employee, he may be paid for time lost. If the accident is a serious affair, resulting in maiming or permanent injury, and the employee sues for damages in the courts, the insurance company fights the case for the firm, and assumes all the charges incident thereto. Now, if the employer has a right to insure against the stupidity or negligence of an employee, why has not the employee the right to insure against unreasonableness in an employer, unjust conditions, poor pay, and all the ills which labor endures?

A poor kind of insurance, you say, which does not insure; but it is the best they know, and it has been partially and indirectly effective. All that labor has to-day is not due to unions; a large share is due to politics, a very small part to philanthropy, and certainly labor unions have had some share in bringing about the improved conditions under which men work to-day. The insurance has insured a little. What scheme have you for a more effective insurance? The case of an employee injured in a factory and suing for damages is being tried in the courts by the insurance company. In other words, "the fight [strike] is on, call in the tithes of all the insured [union] band, they will be paid without question." The case of an injured employee is being fought, therefore it is unjust. "The strike exists, therefore it is just." The employer is fighting the case with money he has not earned. "The strikers and their poorer victims are supported by money they have not earned."

I do not want to take too much of your valuable space. During the last three or four weeks I had hoped some one of your more enlightened subscribers would feel impelled, by your exaggerated position, to write some word of protest or interrogation. I have read the *Nation* for some four years with great profit and keen pleasure. I appreciate the justice and truth of a great deal you write concerning labor unions. I am only one of thousands of non-union men who deprecate the strike, execrate the boycott, and have nothing but the harshest condemnation for violent interference, or interference of any kind, with a non-union worker, but who feel, nevertheless, that, wrong as are some of the methods of the union, they have some justice in, and cause for, their position. Granted the strike is anarchy and the purchase of votes with the offer of favorable labor legislation criminal. Take these away, what means remain to labor of obtaining fairer conditions under which to work?

Everything you have written on the strike has been condemnatory; there has been no enlightenment for the strikers or the great army of workers, union and non-union, whom the coal strike, or any strike, directly or indirectly affects. What light have you to offer, not on the coal strike—we shall soon have all we want of that—but on how to avoid such strikes without placing an armed soldier over every disaffected worker?—Respectfully yours,

Henry Chequer.

7 Dimick Street, Somerville, Mass.

[Nothing seemed to us more imperative, in the late crisis, than to divest the question at issue of all extraneous considerations. Granted that an army of workingmen in virtual control of the output of a necessary of modern industrial and domestic life may conspire to stop work as lightly as if they were employees of a sweat-shop in a great city—a postulate which as moralists we cannot admit; granted that they had a right to build up their organization by a system combined of stress of class opinion, boycott, and persecution, directed against all who stay out of the union—a right to which we shall never give our support; shall we proceed from this to allow the right to terrorize the coal region and prevent the prosecution of mining by means of non-union labor, on the spot or ready to flow in if safety is assured? In other words, shall labor be free in this country whether a strike is pending or not? Our answer is, So should it be, so must it be if we are to remain a nation of freemen. The sins of the operators, the sins of the miners up to the time of their going on strike, we put aside for discussion at the proper moment. The issue, as made up, was whether the operators should give over the direction of their business to an outside organization—or to any organization; and whether they should be violently debarred from filling the places made vacant by the strikers by free contract with non-union men? We feel that the country owes them a debt of gratitude for their firmness in both particulars.

Peaceful methods for the redress of economic grievances are the only conceivable methods in a government like ours. All else are revolutionary. Constant appeals to public opinion, open deliberations, entire abstinence from menace or persecution, united with sober living and exemplary behavior, will not fail of their effect with the American people, though it may be only in the long run.—Ed. Nation.]

## THE RESOURCES OF THE HIGH SCHOOL.

To the Editor of The Nation:

Sir: President Butler of Columbia, in proposing a plan for giving the baccalaureate degree in arts at the conclusion of two years of collegiate work, is probably actuated in part by what he knows of the needs and demands of a very large class of students. To those undergraduates whose college and university life finds its limit only in their own or their parents' ambition, this curtailment does not appeal. As I take it, Dr. Butler has in mind rather that student for whom every year of the coveted college experience is marked by the sacrifices made in his behalf by devoted parents. If, with their help and by his own efforts, he can achieve a year or two of collegiate study before setting himself to the special work of preparation for law or medicine (singular how we now omit all mention of another alternative once the equal of these!), he accepts it gratefully, even without the hope of degree.

And why take we thought for degrees? For two reasons, neither of them answering to lofty ideals of life: social prestige and commercial advantage. Casting these aside, it is the culture we still grasp at. We value a friend not because he has the priv-

ilege of affixing a string of capitals to his signature, but rather for the depth of character and insight which those letters ought to imply. That he has spent years in the society of the great minds and hearts of antiquity means that he has received of their abundance and is no longer poor. Yet, sadly enough, and perhaps naturally, too, the young man who puts his time and money into acquiring this full or fragmentary acquaintance with the immortals, holds out a pleading hand to receive the badge which shall be for a sign unto them who look for signs; for of such are the kingdoms of this world.

Now a practical word, Mr. Editor, as to what is possible while the degree is still withheld, and possible for those for whom even the bisected college course, if it is offered, will be a pinch too hard. Let these avail themselves of the fullest resources of the best near high school. One young fellow whose parents had planned for him this very thing before seeing the suggestion contained in your editorial of October 16, that our preparatory schools might adopt curricula making them "comparable to the French Lycée and German Gymnasium," found that it would be practicable to add to his four years at the high school two more, most profitably, and yet not exhaust its resources. Especially to be noted are the advantages offered in French and German to supplement full courses in Latin and Greek. The magnificent equipment, too, of many of the new schools in the way of chemical and biological laboratories, with skilled and even noted specialists in charge, makes it possible in the case of the intending physician, for instance, to do work in these sciences that will be credited to him in his professional course.

The saving in money of such a plan, and the fact that it keeps the youth under the parental eye a little longer while he is reaching an age suitable for the serious work of the professional school, ought to recommend it in many cases when love of culture and the necessity for rigid economy are engaged in a seemingly irreconcilable conflict.—Sincerely yours,

SARAH WILLARD HIESTAND.

CHICAGO, November 7, 1902.

## "COUNT THAT DAY LOST."

TO THE EDITOR OF THE NATION:

SIR: It is perhaps of little moment who may be the author of the familiar couplet:

"Count that day lost whose low-descending sun
Views from thy hand no worthy action done";

but I have to confess a curiosity in relation to it which books of quotations have failed to satisfy. The ninth edition of Bartlett's 'Familiar Quotations' takes it from Staniford's 'Art of Reading' (Boston, 1803, third edition, p. 27), and compares with it the lines:

"Think that day lost whose descending sun
Views from thy hand no noble action done";

which, attached to Jacob Bobart's autograph, occur (according to Nichols in his work on Autographs) in an album of David Krieg's in the British Museum; Bobart, son of the celebrated botanist of that name, dying about 1726.

Now, a French poet, Guy du Faur, Sieur de Pibrac, a contemporary of Salluste du Bartas, more than three centuries ago, produced (in 1574) a little volume of quatrains somewhat resembling the Rubáiyát of Omar, although tending more towards moral lessons. There are, in all, 116 of these stanzas, of which the 31st is as follows:

"Jusque au cercueil, mon fils, vueilles apprendre,
Et tien perdu le jour qui s'est passé,
Si tu n'y as quelque chose amassé,
Pour plus sçavant, et plus sage te rendre."

The little work was rendered into English—and very well rendered, too—by Joshua Sylvester, the leading religious poet of his day in England (1563-1618). I am ignorant of the date of Sylvester's publication, which is not specified in the Dictionary of National Biography, but can approximate to it by noting that his translation of the second of Du Bartas's "Devine Weekes" was dedicated to Prince Henry of Wales, among others, and published in 1611. In the dedication to the Prince, Sylvester says:

"The gracious welcome you vouchsafed erewhile
To my grave Pibrac, though but meanly clad,
Makes Bartas now—no stranger in this isle—
More bold to come, though suited even as bad,
To kiss your Highness's hand."

Henry was seventeen years old in the year 1611, so it is not likely that the Pibrac translation was more than a few years earlier, at most, and it may probably be placed between 1605 and 1611. Sylvester's version of the quatrain is as follows:

"Cease not to learne untill thou cease to live;
Think that Day lost wherein thou draw'st no Letter,
Nor gain'st no Lesson, that new grace may give,
To make thy Selfe Learneder, Wiser, Better."

The relation between the stanza and the couplet appears to be close enough to indicate that one of them was adapted from the other.

T. W. HAIGHT.

WAUKESHA, WIS., November 1, 1902.

# Notes.

The Century Co. has secured the American allotment of President Kruger's Memoirs, which it will have ready by the end of the present month.

About the same time, Houghton, Mifflin & Co. will issue 'The Life of Roger Wolcott,' late Governor of Massachusetts, by William Lawrence, Bishop of Massachusetts. They further announce a new edition of Maria S. Cummins's 'The Lamplighter,' published originally in 1854, and attaining a remarkable vogue.

'Boston Days,' by Lilian Whiting, is in the press of Little, Brown & Co.

L. C. Page & Co. have nearly ready 'Our Noblest Friend the Horse,' by Francis N. Ware, with many illustrations.

Illustrated in color and line will be 'A Patrick's Day Hunt,' by Martin Ross and E. O'E. Somerville, to be published by E. P. Dutton & Co.

The seven-volume edition of 'The Works of Edward FitzGerald,' over which Mr. W. Aldis Wright presides, will make a monthly appearance through Macmillan Co., from December on. Few announcements of the season rival this in interest.

That the best is not always the enemy of the good will be proved, we think, by the reception that awaits A. C. McClurg & Co.'s clear and handsome reprint, in two volumes, of the Biddle text of the 'History of the Expedition under the Command of Captains Lewis and Clark.' In other words, the late Dr. Coues's monumental annotated edition, being out of print, can no longer compete in the market with the original edition of 1814. The present publishers have appropriately chosen for "supervisor" rather than editor Dr. J. K. Hosmer, the historian of the Louisiana Purchase. His part has been also to furnish an introduction containing a broad view of the causes leading up to the purchase, and which linked Napoleon's name with Jefferson's in the most famous of our continental expansions; and to supply an index. This is a welcome innovation upon Biddle. It is analytic in the case of the two leaders of the expedition and in some minor rubrics; but such a one as "Mosquitoes" has fifty blank numerical references. Two new reproductions of portraits of Lewis and Clark accompany the facsimile of Biddle's maps; but we miss a map of the whole route laid down upon our existing political divisions. In other respects we have nothing but praise for this venture of the Chicago firm.

Two white and gold volumes in duodecimo issued for the gift season by G. P. Putnam's Sons are a reduction of the Moxon edition of Tennyson's 'Idylls of the King.' Doré's designs have undergone a corresponding change of scale with the letterpress, and naturally lose somewhat as illustration while answering all the purposes of decoration. Print and binding are in commendable taste.

The joint effort of Carolyn Wells and Oliver Herford in 'A Phenomenal Fauna' (R. H. Russell) reflects the cleverness of both. Miss Wells's metres sometimes limp from a false stress, and Mr. Herford's pencil occasionally shows less droll, but they generally pull evenly together, as in the case of "The Fire-Dogs." The lady's natural history of "The Human Swallow" is more successful than the artist's conception, which is, however, paralleled with great effectiveness in "The Flying Buttress" and "Time-Flies"—two very convincing designs—and in "The Brickbat." Excellent, also, are Mr. Herford's "Round Robin," "Bookworm," "Jail Bird," and "Irish Bull" (to whose jokes John Bull is so impervious). Miss Wells sings merrily of "The Haycock" that never crows and

"has no brains,
No, not enough to go in when it rains,"

and concludes, respecting the bird already mentioned—

"The Swallow's strong when he is in his prime,
And yet a man can down him every time."

Mr. William J. Long, in 'School of the Woods' (Ginn & Co.), has another entertaining collection of animal stories derived from his experience in Northern woods. His subjects are chiefly the larger and rarer animals, seldom met except by hunters and naturalists; and some of his incidents are strikingly uncommon. He believes that instinct has much less to do in governing the lives of birds and mammals than early education has; and that animal fear, which he defines as watchfulness and timidity, is not instinctive, but results from the mother's teaching. As reasons for this belief, he suggests the frequent fate of young, untrained wild creatures abandoned to instinct, and of domesticated animals forced to take to the life of the woods, and, further, gives various observations of his own. On one remarkable occasion, described more fully in a preceding volume, 'Beasts of the Field,' he watched a group of caribou mothers teaching their young ones

to follow a leader and to jump over a fallen tree; on another, he found hidden away two young fawns that showed no fear of him, and he noted the means by which the terrified mother inspired them with distrust. Later, he had other opportunities to watch their education, until one fawn became wise and wary, and the other perished through disobedience to the mother's teachings. Mr. Long also takes the ground, in opposition to well-known naturalists, that on the whole the life of wild animals is untroubled and joyous, and that for most of them death is not a tragedy.

Helen Zimmern's 'Alma-Tadema,' in "Bell's Miniature Series of Painters" (New York: Macmillan), gives, in pleasant enough form, as much as is necessary to be known of that eminently skilful and popular but uninspiring painter. In the illustrations, however, his especial qualities of elaborate detail and suave execution are hardly treated by the excessive reduction which the scale of the booklet necessitates. In the more elaborate and crowded subjects, especially, one gets only a sense of confusion, which the artist's system of composition does nothing to clarify.

In 'Sea Fighters from Drake to Farragut' (Scribners) Jessie Peabody Frothingham tells afresh the stories of Drake, Tromp, De Ruyter, Tourville, Suffren, Paul Jones, Nelson and Farragut, in a manner well calculated to arouse enthusiastic admiration for these gallant sailors in the boyish breast, and win a renewed tribute of respect on the part even of "the grown-ups." It is only when she struggles with technical details that our applause falters. What Drake was doing when "he lay close-hauled in Lisbon Harbor"; what happened to Tromp's vessel when raked "from helm to stern"; what "machinery" was "riddled" on board of Suffren's sailing-vessel, the *Mars;* who, in 1756, had ever heard of a "coaling-station"—these are conundrums to puzzle Benbow himself. Clear type, good paper, excellent illustrations (too few in number) combine with a stirring subject and an agreeable style to commend the book to those weary souls soon to be in the thrall of the annual search after Christmas gifts, not only for sons and nephews between the ages of the hobby-horse and the polo pony, but for older friends as well, who still relish a deed of daring skilfully told.

Capt. A. T. Mahan has collected a number of his contributions to various magazines, and republished them in a volume entitled 'Retrospect and Prospect' (Boston: Little, Brown & Co.). The vaticinations concerning our future as a "World-Power" seem now a little stale, and must pall upon the appetite of even the most enthusiastic Imperialist. The spirit of Capt. Mahan's teaching is well illustrated by his contention that private property upon the sea should be destroyed in war. Gen. Jacob Smith's order to the American forces in Samar, to kill every one over ten years old, seems to be an improvement on this doctrine.

Four addresses by Carroll D. Wright are republished by the American Unitarian Association, Boston, under the title 'Some Ethical Phases of the Labor Question.' The essays are homiletical in character, and prove at least that their author has a benevolent disposition. He repeats the popular fallacy concerning the followers of Adam Smith, that they maintain that men should seek their own advantage without regard to the welfare of others; but he can hardly be blamed for believing a proposition so generally accepted. On the other hand, he does something to expose the fallacy that the condition of laborers in factories is inferior to what it was under the domestic system.

That our American public is more or less apathetic in regard to the artistic decoration of country homes by means of vegetation effectively arranged, is shown by the fact that *Garden and Forest*, a journal devoted very largely to this subject, and characterized by a fine taste, was suffered, after a useful life of ten years, to die from lack of support. This deplorable state of affairs cannot be remedied in any more effective way than by the publication of just such works as 'A Plea for Hardy Plants, with Suggestions for Effective Arrangement,' by J. Wilkinson Elliott, Landscape Architect (Doubleday, Page & Co.). One may not agree with all the advice here offered by Mr. Elliott, but one must confess, nevertheless, that very little of the advice is really misleading; nearly all of it is good and stimulating. The facility with which photographs can now be reproduced in printed illustrations gives modern works on landscape architecture a very great advantage over their predecessors. In Mr. Elliott's volume the photographs have been excellently chosen, and their execution is nearly perfect. All the working plans seem to be practicable, and the descriptions are lucid. Any person of taste ought, with a little leisure and with the suggestions offered in this book, to be able to arrange, fitly and harmoniously, around a country-house, plants adapted to our outdoor conditions. It is pleasant to think that, even in our exacting Northern climate, we have a wide selection of beautiful plants. The main thing is to get them put in the right instead of in the wrong places.

The first annual issue of the 'International Catalogue of Scientific Literature: Botany, Part I.' (London: Harrison & Sons) forms a volume of rather less than 400 pages, embodying an immense amount of work. Considering its costly character, it is offered to the scientific public at an astonishingly low price, namely, one guinea. It deals with one of the seventeen branches of science for which the International Council of the Royal Society of England has undertaken to provide catalogues. The original scheme, it will be remembered, provided that each catalogue "should comprise all original contributions, whether these had been published in periodicals or in the journals of societies, or as independent pamphlets, memoirs, or books." It was held to be of great importance that not only the titles of papers, but their subject-matter also, should be indexed; but financial considerations have led to the number of subject-entries being at present limited in number. There has been less coöperation on the part of authors themselves than the committee had a right to expect. Therefore, the index at present leaves a good deal to be desired. The second part of this volume on Botany will be issued in the course of a few months. The sections under Botany number more than one hundred, and many of these are subdivided into numerous minor headings. When the plan is once understood, it is comparatively easy to find the special topic indexed. It may not be known to some of our readers that in Zürich, at the present time, an American, Mr. Field, is conducting successfully a comprehensive index to current zoölogical literature. His system is admirable in conception and execution. Mr. Field has thought of extending his system to botany, but, so far as we are aware, he has not yet done so.

We lately noticed the appearance of Part I. of 'Petrie's Collection of Ancient Irish Music' (London and New York: Boosey & Co.). Part II. is now to hand, bringing up the number of tunes and variants of tunes to 1,054. We understand that a third part will finish this most wonderful collection of Irish folk-music in existence. All the tunes in Part II. are named, as were only some half of those in Part I. The ancient lullabys, laments, and funeral cries are particularly interesting. The setting, which is in the treble clef alone, is simplicity itself.

The issue of Parts xxviii., xxix., and xxx. of Poole's 'Historical Atlas of Modern Europe' (H. Frowde) brings that work to a close. Part xxviii. contains Mr. C. Grant Robertson's map of the Growth of Russia, 1415-1890; Miss Eckstein's Italy, 1167-1250; and Mr. S. Lane-Poole's India under Mohammedan Rule, the Kingdom of Delhi *c.* 1340, and the Mogul Empire at the death of Akbar, 1605. The map of Prussia, in addition to the large map of Germany, comprises three insets, the Principality of Neufchâtel, the Principality of Orange, and the Gold Coast, too small to serve as maps of value, but interesting and important as calling attention to abandoned incidents of expansion. The letterpress of Mr. Poole's map is accompanied by a large table of the Mohammedan dynasties of India. Part xxix. comprises Europe at the time of the Third Crusade, by the Editor; Mr. Robertson's Germany, 1815-1897; and Mr. W. A. Craigie's Scandinavia in the Thirteenth Century. Part xxx. includes Mr. Robertson's Germany, 1647-1795; Mr. Charles Oman's India in 1792 and in 1845 (double map with inset); and Mr. G. Geoffrey Palmer's South Africa previous to the suppression of the Boer Republics. With these the series is complete, and the work can now, presumably, be obtained in bound form. Judgments as to what maps should or should not be included in such an atlas must of necessity vary, but in the main the grouping, both in respect to selection and proportion, is very good. The inclusion of many maps, hitherto inaccessible in any authoritative form, notably those connected with English history, gives the atlas a value independent of its general worth. No one could recognize its dependence on the work of Spruner and Menke more fully than does the Editor in his preface, yet the new material, the recasting of the older matter, and the mechanical execution make this atlas worthy to rank beside its predecessor and model. One feature, to be sure, hoped for rather than expected, is, indeed, lacking—an index. Such an addition would, no doubt, have greatly increased the labor and expense of making the atlas, yet one can but regret its omission.

Our readers may be glad to know of the *Quarterly Bibliography of Books Reviewed in Leading American Periodicals* (29 in number), edited by George Flavel Danforth, Librarian of Indiana University, and published at Bloomington. The successive issues

embrace what has gone before, on the well-known cumulative plan. The entries are by author, when possible; the name of publisher and the price are given; and the reference is by volume and page. Volume i. began with January, 1902, and the third issue comprises 144 octavo pages.

The *Smith College Monthly* for November contains in the Alumnæ Department an article on "The Problem of the South," by Miss Helen M. Chesnutt, daughter of Mr. Charles W. Chesnutt, the well-known author. It treats briefly of the race problem, and more at length of its solution in the work at Tuskegee. The subject and the writer make the article notable.

The fifth Bulletin of our Copyright Office at Washington is a second edition by the Register of 'Copyright in England: Instructions for Registration for Copyright Protection within the British Dominions,' already embodied in Bulletin No. 5. But there has been added Sir J. Stephen's Digest of the English Copyright Law, together with the text of copyright acts from 1875 to date, and a list of all copyright enactments 1709 to 1902, with notations of modifications, amendments, and repeals, etc.—altogether a labor such as Mr. Solberg alone is capable of. The seventh Bulletin will present German Copyright.

The account of the operations of the Great Trigonometrical Survey of India, volume xvi., is devoted to 'Details of the Tidal Observations taken during the Period from 1873 to 1892, and a Description of the Methods of Reduction,' by John Eccles, M. A. The observations were originally begun in order to investigate the supposed secular changes in the relative level of land and sea, more particularly on the coast of Káthiáwár. Eventually, the system of tidal investigations adopted by a committee of the British Association for the Advancement of Science was put in practice, with a view to securing scientific results of the highest value. These researches, it was expected, would lead to an evaluation of the mass of the moon, to information concerning the rigidity of the earth, to an approximation of the depth of the sea from the observed velocities of the tide-waves, and to various practical benefits to navigation. The results of the observations and values of the tidal constants appear in the second part of the volume. Daily records of temperature, pressure and wind have been taken at every station by means of a complete equipment of meteorological instruments. Some attempts have been made to trace a connection between errors of tidal prediction and the effects of wind and pressure, but without success. Irregular tides, falsifying predictions, may be produced on a coast by storms in mid-ocean too distant to affect the barometer or the anemometer of the tidal station; or the effects of storms may be transmitted through the air and the water at widely different velocities, and may thus be recorded on the tidal and meteorological instruments at widely differing times.

The Geological Survey of Canada has published Part VII. of its 'Catalogue of Canadian Plants.' It contains descriptions, by John Macoun, of all the species of liverworts and lichens known to occur in Canada, and an addendum to Part VI., in which knowledge of American mosses north of the United States is brought up to date.

—The Soule Art Company, Boston, have issued what they boldly name a 'Complete Art Reference Catalogue.' It is a stout volume of nearly 1,500 pages of clearly printed text—evidently an enterprising venture. The 30,000 or more entries are the titles of the photographs which the company offers to supply at the prices named. Such a volume might have been of almost incalculable utility to students of art, but it is unfortunately constructed on false principles. To begin with, it mixes old masters and contemporary artists together, which every buyer of photographs of works of art will perceive to be a blunder. Few purchasers collect both kinds. It would have been quite easy to separate them in two volumes, and group the old masters in schools, and chronologically instead of alphabetically. The other and worse error is that the name of the photographer is never stated. Now in modern books on art history the pictures of old masters are often, and their drawings are almost always, identified by the Braun or Hanfstängl number. In the preface it is stated that the best print of a given subject is supplied, whoever its photographer happens to be. A buyer, however, will not be inclined to trust a dealer's judgment in that matter, and will prefer to select for himself. We do not intend to imply that this catalogue will be useless—far otherwise; but serious students of art history will prefer to keep on hand for their own use the now classical catalogues of Braun, Hanfstängl, Anderson, and the other photographers of established reputation.

—'Fifty Mastersongs,' for high voice, edited by Henry T. Finck for Oliver Ditson & Co.'s "The Musician's Library," is a quarto volume most attractive without and within. The print of both words and music is beautifully clear, and each piece has attached to it the names of poet, composer, and (if need be) translator; their life period; and the date of composition. The editor, an experienced book-maker, also supplies author and composer indexes repeating the above personal data, portraits of nine among the greatest of the twenty musicians represented, and some informing discourse concerning the collection, with special remarks on each piece and its author. Mozart is the only one whose life fell wholly in the eighteenth century; Beethoven and Schubert the only other two born in that century. From Chopin on, we keep nineteenth-century company, down to Richard Strauss (born in 1864) and the American MacDowell, whose setting of Mr. Howells's "The Sea" dates from the present year and so is a twentieth-century product. The distribution of nationalities is very catholic. Of the fifty "mastersongs," but twenty-nine are of German origin. Norway, Russia, Poland, Hungary, Bohemia, France, and the United States divide the remainder. Significant is the quota (six) allotted to Grieg. Mr. Finck could find no Italian song worthy to stand in line with the others; and what a shock this would have given to the author of the 'Dictionnaire de Musique' of 1765, who mentions never a song-writer except French, and refers solely to Italy and Scotland as other lands of song. (But he was later to be a partisan of Gluck.) Some now may wish that Mendelssohn might not have gone without a single witness in this collection, as being all "stale." Heine leads Goethe in it as the inspirer of musical song, with seven and six texts respectively. Bodenstedt and Tom Moore occupy the third place with two each. On the musical side, Schubert figures most prominently, with Robert Franz and Grieg tieing each other next after. We forbear to catalogue the songs, of which the high order is indisputable; but we can testify to the validity of the publishers' claim regarding the renovated translations, that they are a great improvement on those heretofore in vogue.

—Under the title 'Mediæval Europe' (Holt), Miss Mary Sloan translates an excellent text-book on the history of the Middle Ages which MM. Charles Bémont and Gabriel Monod have prepared in collaboration. Though written by two eminent members of the École des Hautes-Études, this book is free from all parade of learning, and is even adapted to the use of higher schools. Prof. G. B. Adams, who furnishes a preface, is impressed by the authors' "great simplicity of statement," and we must concur in the view that nothing clearer or more direct could be desired. We also approve an arrangement that allots all the space to text, maps and brief bibliographies. It is becoming doubtful whether in these short manuals the illustrations are worth the room they occupy. As for the scope of the book, it begins at the close of the fourth century, and comes down to the death of St. Louis. There is an admirable account of institutions, and no time is lost in the narration of facts which cannot be made to illustrate features of expansion and advance. The importance of France is not exaggerated, neither is there a disposition to slight the annals of the Church. One other point deserves notice: while all show of erudition is avoided, the text keeps in close touch throughout with original sources, and to this fact we must attribute much of its vitality. In short, we can praise the book with great heartiness, and urge its adoption in cases where the student's view of the Middle Ages must be restricted to a brief survey.

—Whatever effect the "Rhodes" scholars may hereafter produce on the academic life of Oxford, the University itself has obviously no choice, at present, but to ignore what does not exist. The point of view in America and the British colonies is naturally less detached. With a somewhat precipitate faith in the ability of trustees and electors to light on students who will satisfy all the tests, intending candidates, chiefly Americans, are already inquiring into the conditions of study at Oxford. On behalf of the American Club of Oxford, Mr. Louis Dyer has recently issued a neat sixpenny pamphlet entitled 'Oxford As It Is' (Macmillan), in which he answers these inquiries and forestalls others that will be certain to arise. It is, in fact, a revised and enlarged version of the circular published by the Club in May, 1900, "for the purpose of presenting information with regard to Oxford conditions of study in terms intelligible to American students unfamiliar with English University and College systems." The need of such a summary will be felt by the American student who realizes that full official information is not to be had in a concise form for the asking, but is scattered in a number of University publications, such as the *Statuta*, the Oxford University Calendar, the Oxford

Examination Statutes, and the University *Gazette*. In addition to these, one could hardly dispense with the 'Students' Handbook to the University and Colleges of Oxford,' and to acquire them all would cost at least four dollars; to use them effectively, one would need experienced advice. On the other hand, Mr. Dyer, in some forty pages, defines the general system of Oxford education, describes the Colleges and the University with their officers, and gives all the necessary information for the requirements of residence, matriculation, examinations, and degrees. He does not, of course, attempt to give any list of the lectures in the various departments; for these the student will need the *Gazette*, in which the official programme is published at the beginning of each term, having been drawn up, as a rule, at the end of the previous term. Under the head of information concerning degrees and the steps to be taken by a candidate who approaches examinations, Mr. Dyer's readers, if they are already graduates, will probably be most interested in those degrees which do not require the Oxford B.A. as a condition precedent. These are the B.C.L., the D.C.L., and the new "Research" degrees in Science and Letters. Until 1895 no degree except that of B.A. was open to graduates of any university or college but Oxford, excepting only cases of "incorporation." There are now, however, six degrees open to advanced students resorting to Oxford; those in Science and Letters being conferred upon candidates who give evidence of having received "a good general education," while those in law are open to students who have obtained an approved B.A. elsewhere than at Oxford.

—It should be noted by those having Rhodes scholarships in view that they will not be allowed to avail themselves of the "non-collegiate status"—that is to say, they will be expected to enrol themselves on the books of one of the Colleges. Mr. Dyer has devoted a chapter to "Expenses and the Like," in which he estimates that, "with strict economy," £120 (or $600) may be made to cover all the necessary charges of a student residing in college rooms for the twenty-four weeks of the academic year. But it would be a grave mistake, we are convinced, for an outsider, with no knowledge of English life and the points at which economy can be practised, to embark on an Oxford career with so small a margin; it would entail a narrowing of outside interests and of social life that would rob an Oxford course of many of its advantages. The full account given by Mr. Dyer of the Oxford B.A. requirements is not intended for Rhodes scholars, but it will serve students from the British Colonies who go to Oxford with the intention of taking the B.A. course. A few Americans have done this in the past, while others have added the Oxford B.A. to their American bachelor's degree. But whether or not it was Mr. Rhodes's intention, it seems probable that his scholarships will be given to graduates, in which case it is to be hoped that an interchange of advanced students between America and England will result. Advocates of the elective system in America will see from Mr. Dyer's table of examinations for the B.A. degree on page 25 that only "Responsions," the first and very elementary examination, answering to the "Little Go" at Cambridge, and Holy Scripture are compulsory. After this, the whole scheme offers alternatives, and is as truly elective as the Harvard programme, except for certain regulations governing the intermediate stage of work for the student of Mathematics, History, and Law. Mr. Dyer devotes a page and a half to the Women's Colleges at Oxford. But their interests are more fully served in the 'Graduate Handbook' published by Bryn Mawr College; moreover, they are outside the pale of the Rhodes foundation.

## NORMAN'S ALL THE RUSSIAS.

*All the Russias.* Travels and Studies in Contemporary European Russia, Finland, Siberia, the Caucasus, and Central Asia. By Henry Norman, M. P. With 129 illustrations, chiefly from the author's photographs, and four maps. Charles Scribner's Sons. 1902.

The public is already, in a way, acquainted with Mr. Norman's book. In its original form, it appeared as a series of articles in *Scribner's Magazine*. During the two years and a half which have elapsed since the first of them saw the light, the author has amplified his material to about twice its projected dimensions, and has brought the political portion of it up to date; the statistical as nearly so as possible.

In his engaging preface, Mr. Norman states that the book is the outcome of four journeys to Russia, added to an interest in the subject which had extended over years. He disclaims any intention to write a comprehensive account of Russian institutions and Russian life, confining his aim to a presentation of the aspects of contemporary Russia, with especial reference to the recent remarkable industrial and commercial development, and the present and possible future commercial and political relations of the country with Great Britain in particular, and other nations in general. He says that he has tried to be fair and frank in his judgments. Every facility was afforded him for studying the country and its problems—even to the point of furnishing him with special trains and steamers, on one or two occasions, to enable him to reach otherwise inaccessible spots; and, very obviously, the Russian law-student from the University of Moscow whom he took with him as interpreter, deserves to the full the author's cordial acknowledgment of indebtedness, and contributed not a little to the success of the undertaking.

Mr. Norman's previous books have made his graphic "reportorial" style familiar to the public. His powers do not fail him here: but it must be said that he is so intent upon his ulterior purpose of presenting political and economic facts that he uses the descriptive part of his work chiefly as the sugar-coating of the solid substance beneath. It is superficial, somewhat surprisingly so; as when, for instance, instead of using his eyes, he repeats the hoary misstatement of the guide-books, that each of the great steps of the St. Isaac Cathedral in St. Petersburg consists of a single giant monolith, says that there is an *ikona* (holy picture) in every room of every house, that the present Emperor's coronation took place in 1894, that "the demand for cotton goods is practically unlimited, for the entire population of Russia wears it" (they wear linen chiefly), makes two states in the Caucasus out of one, by mistaking Gruzia, the proper form of Georgia, for a separate entity; describes the Hermitage as "once Catharine's pavilion, but since 1850 the magnificent home of the world-famous collection of pictures"—the fact being that Catharine II.'s Hermitage, where she held her renowned little gatherings, is the Old Hermitage, situated between this picture-gallery and the Winter Palace, and connected with both by glazed galleries over the intervening streets. Precisely what Mr. Norman means, too, when (p. 37) he labels a picture "The Kremlin Square and Memorial of Alexander III.," it is difficult to divine. The square is the Red (or Beautiful) Square, outside of the wall of the Kremlin, within which, on the diametrically opposite side, a quarter of a mile or more away, stands the memorial to Alexander II., which Mr. Norman probably intends to refer to.

Perhaps the most striking instance of erroneous statement (the responsibility for which must, evidently, be divided between the author, his interpreter, and the printer) is the sonorous list of the Emperor's titles which Mr. Norman, with a fine perception of their suggestive value, quotes on page 35. The score of mistakes therein contained are so varied and complicated that nothing short of a complete (double) transcription of the passage would cover the ground. From this we refrain, confining ourselves to one or two examples and suggestions: *Foer* and *Ingor* are intended for Tver and Yugria; but if the abbreviated Russian adjective form, Tcherkask, is to be used for Circassia or the Russian noun, and Kartalinsk (here distorted into Kastalnisk) for Kartalinia, the above should read Tversk and Yugorsk, while all the rest should be made to match, *e. g.*, Finlyandsk, Norvezhsk, Turkestansk, Moskovsk, Permsk, and so forth. Again, if the Russian form of the proper name is to be retained, Estlyandiya, Lifiyandiya, and the like, should replace Esthonia, Livonia (here distorted into Libonia); while Samogitiya should be allowed to stand, or consistently left in the adjective form, Samogitsk(y), instead of being translated into another purely Russian word, Samoyeds. Kabardinsk and Armenia should either read Kabarda and Armenia, or Kabardinsk and Armensk; and the erroneous punctuation after Armenia throws the title out of shape in that place. In another edition, it would really be worth while to have this passage revised and the typographical errors also eliminated.

Mr. Norman was, probably, more intent upon his special subjects, the political and economic aspects of the country; and we will assume that his study of those aspects is as thorough and accurate as it is interesting. For, even despite these and other inaccuracies, he contrives to convey a generally fair and vivid picture of the impression which things Russian, of the surface also, make upon the unprejudiced foreigner. It may even happen that he will be disbelieved by the average person and the sensationalist (or the American who has passed through the ordeal of the American custom-house of late years), when he truthfully says that he was never more courteously treated or more expeditiously dispatched than at the Russian frontier. Thoroughly just, profound, and broad of grasp is the prefatory summing up of the situation, on page 32,

in regard to the industrial development of Russia:

"It is a momentous development. Russia, with great aggregations of capital in middle-class hands, alongside an impoverished nobility; Russia, with her fields, like our own, depleted of labor, which has gone to the factories and the towns; Russia, with the character of her masses, upon whom alone rests the mighty and complicated fabric of her Church and State, essentially changed; Russia, with her colossal mineral wealth in full exploitation; Russia, ever more nearly self-sufficing and more independent of the Western World; Russia, pushing her railways, building her factories, and opening her mines, right out into the heart of China and the centre of Central Asia, while she is deliberately ringing India round with her net of railways—this is the Russia of the future. . . ."

Here we have the keynote to the book—generous appreciation of the past, present, and future problems, both domestic and foreign, with their significance to the world at large. Occasionally, one could wish for a few words of explanation, as when Mr. Norman touches upon the grain harvest, and says: "But it is in her most fertile districts that the worst famines occur; a little one every year, a big one every seven years, has now become a regular occurrence." The reader naturally asks, Why? Because of the scanty normal rainfall, from which nothing can be spared, and which, in the lack of irrigation to replace it and of fertilizers to counteract the superficial cultivation, is gradually reducing the famous black-earth zone to the condition of the arid plains adjacent on the East, embracing the Sea of Aral; because of the lack of laborers (at a reasonable hire) to reap, and elevators or public granaries to store, the harvests of the fat years, in spite of the fact that Russia possesses, at one of her southern ports, the largest grain elevator in the world. The author partly covers the ground—though he does not make the connection—when he says:

"The extraordinary—the almost incredible—growth of industrialism in Russia is bringing about a great and vital change in the masses of the people. The peasant who works with hundreds or thousands of his fellows in a mill or factory soon becomes a different being from the peasant toiling on his bit of village land, and migrating hither and thither, in seasons of agricultural work, for employment. This, to my thinking, is by far the most significant and important aspect of Russia of to-day. . . ."

But before we proceed further in this direction, let us advert to his interesting chapter on a visit to Count L. N. Tolstoy, at Yasnaya Polyana. Practically, the author confesses to defeat in his attempt to interview the Russian sage, "for his soul dwells apart, and you cannot get on the same plane with him"—so Mr. Norman winds up his description of an attempt to get at personal details or opinions. When one of the novelist's daughters (whom Mr. Norman calls "Miss" Tolstoy) tells him that the landed estates are passing out of the hands of the nobles into those of the rich merchants and manufacturers of the cities, who seek the prestige conferred by lands, and adds that, even of these, the third generation is always ruined and has to begin again—"No Russian ever 'founds a family,' as you say. A man makes his fortune, his son lavishes it, his son disperses it"—Mr. Norman accepts it for gospel truth, as he does the Count's delphic utterances, over which he confessedly ponders for days. To this version of "From shirtsleeves to shirtsleeves is three generations," he should have replied by asking—he might have omitted allusion to the speaker's own family—how the Demidoffs, the Stroganoffs, and other aristocratic families were founded; and, conversely, if it was not a fact that the aristocracy, during the last half of the 18th century, for example, did not monopolize all the despised commercial undertakings to such an extent that no ordinary merchant could exist in competition. Tolstoy's utterance, that he wished the Government would arrest and banish him—that this would be a great joy to him—is characteristic. The summary of the excommunication decree and resulting correspondence is interesting; but it would seem superfluous to explain that the decree was not eternal, only temporary, since repentance always abrogates such a decree.

As our readers are aware, in the chapters on Finland and the Finns Mr. Norman shows himself a partisan of Russification of that province. For violating her promises to Finland, Russia, he thinks, cannot be criticised by the very countries which are most vociferous, but which have themselves violated sacred promises—Germany (to Denmark), France (to Madagascar), England (to Egypt), the United States (to Cuba). In a concluding paragraph he calmly points out the extremely simple method whereby Russia could, with perfect ease and safety, absorb the whole of Finland in a couple of months without a voice being raised in protest. No doubt.

Mr. Norman visited, also, the Caucasus, Central Asia (Russian), and went as far as Irkutsk on the Trans-Siberian Railway. His conclusions as to Russia's civilizing work in Asia, and the world-wide importance of the industrial and commercial fields which she has opened up, are absorbingly interesting. After ample statistics as to the Trans-Siberian Railway, and description of its comforts and defects, he concludes: "Since the Great Wall of China, the world has seen no one undertaking of equal magnitude. That Russia, single-handed, should have conceived it and carried it out, makes imagination falter before her future influence on the course of events." At Irkutsk, he is amazed, when he visits the prison, "at the good feeling, not to say familiarity, which prevails between the officials and the prisoners," among whom, as he confesses, he was at first almost afraid to go, protected only by the three officials. He records that he saw a number of "politicals" elsewhere, at various times, but they were all earning a good living as clerks or bookkeepers; and he again states the well-known fact that the "politicals" have made Siberia what it is, and that the lot of the common criminal will, hereafter, be harder when imprisonment replaces the outdoor life of Siberian exile.

Of the Trans-Caspian Railway, he says: "It has brought peace and commerce (and civilization, as Russia understands the word, to a vast region where so few years ago utter barbarism reigned. Moreover, it is but the beginning of what is to be in this part of the world. No thoughtful foreigner can make the journey without conceiving a profound admiration for Russia's courage and a profound respect for her powers; . . . for the rest of the world, it is half-a-dozen object-lessons in one." He is confident that Bokhara will soon revolt and demand to be annexed to Russia, for the sake of securing good government and other benefits. As to the burning and exceedingly delicate question of rivalry for supremacy in Persia, between England, Russia, and Germany, and Russia's aim to build a railway to the Persian Gulf and block off Germany's designs, he says that "Russian statesmen would be poor in patriotism, indeed, if they did not make every effort to secure it"; in fact, as a general proposition, he thinks Russia is England's natural ally, and he hopes to see that combination effected in the near future. He does not believe that Russia has any designs upon India—especially in view of the recent prolonged distress there; and he not only regards railway connection, through Afghanistan, between Russia and India as inevitable, but is certain that it will be of as much benefit to England as to Russia. He even thinks that Kashgaria and Kulja belong in Russia's sphere, and utterly outside of England's, and that the latter should raise no objections to their annexation by the former. In a very instructive passage he goes to the root of Germany's aspirations and machinations for power in Asia Minor and Persia, but declares that nothing short of a superior force can keep Russia from a warm-water port and the control of Persia and the Persian Gulf.

One of the points on which Russia has, of late years, been greatly misunderstood is her attitude on the liquor question and the bearings of her Government monopoly in the sale of spirits. This, as Mr. Norman lucidly sets forth, is one of M. de Witte's most important reforms. M. de Witte proceeds on the theory that a man drinks for three reasons: because he has a natural desire to do so, because he is incited to do so, because he is given credit to enable him to do so. Of the new Russian plan for coping with this evil, it may briefly be said that the present Government monopoly eliminates the last two reasons, with the result that the people are immensely improved, physically and morally, and the state receives a large income from supplying a much more wholesome quality of liquor at a minimum price. But we cannot enlarge further on Mr. Norman's economic chapters. While his volume has not the permanent value which such works as those of Wallace and Anatole Leroy-Beaulieu must, of necessity, retain even when they have become more or less antiquated, it is indispensable to every student of Russia at the present time.

## THE ARGIVE HERÆUM.

*The Argive Heræum.* By Charles Waldstein, with the coöperation of George Henry Chase, Herbert Fletcher De Cou, Theodore Woolsey Heermance, Joseph Clark Hoppin, Albert Morton Lythgoe, Richard Norton, Rufus Byam Richardson, Edward Lippincott Tilton, Henry Stephens Washington, and James Rignall Wheeler. In two volumes. Volume I., General Introduction, Geology, Architecture, Marble Statuary, and Inscriptions. Boston: Houghton, Mifflin & Co. 1902.

When, in 1892, Dr. Waldstein, at that time Director of the American School of Classical Studies at Athens, began to excavate on the site of the great temple of Hera near Argos, there was reason to expect that

interesting fragments of decorative sculpture would be found, and perhaps that the plan and elevation of the temple erected about 420 B. C. could be made out. There was also some reason to hope that the plan of the earlier temple, which was destroyed in 423 B. C., might be determined, and of course there was every probability that a considerable number of miscellaneous objects, such as inscriptions, terracottas, small bronzes, coins, and vases, would be unearthed; but whether any of these would be of great importance could not be foretold. The excavations, carried on in the four springs 1892 to 1895, brought to light the remains of no less than ten buildings, nearly all of which can be more or less satisfactorily restored in plan and elevation, numerous fragments of most beautiful sculpture from the temple erected in the fifth century, and vast numbers of terracottas, vases, and bronzes. In every respect, except perhaps in the number and importance of inscriptions and coins, the results far exceeded the most sanguine hopes.

The site of the Heræum is a detached hill projecting into the Argive plain a little more than three miles from Mycenæ, a little more than five miles from Argos, and some six miles from Tiryns. It is, however, not visible from Mycenæ, as a spur of the mountain intervenes. On the other hand, the site is especially prominent when seen from the region of Tiryns and Midea, and yet these ancient cities are so far away that the Heræum can hardly have been founded in connection with either of them. The very position of the sanctuary indicates that it was founded independently of any of the four cities in its neighborhood, and Dr. Waldstein's suggestion that it was the original citadel of the earliest inhabitants of the region is inherently probable. Among the walls found at the Heræum is one resembling those of Tiryns, while others seem to have been built by the builders of Mycenæ. Dr. Waldstein distinguishes three periods in the history of the Heræum, in which it belonged successively to Tiryns, Mycenæ, and Argos, as each in turn was the ruling city of the Argolid. Now the walls of Tiryns were, according to tradition, built by Lycians brought to Argos by Proetus.

To Proetus, then, the retaining wall of the Old Temple, which resembles the walls of Tiryns, is to be ascribed. The date of that temple is fixed by Mr. Penrose, on astronomical grounds, at about 1830 B. C., which therefore stands for the date of Proetus and of the greatness of Tiryns. But the genealogies given by Pausanias contain a long list of names before Proetus, and there is evidence of human habitation at the Heræum before the building of the retaining wall of the Old Temple. This evidence seems to Dr. Waldstein to add to the credibility of the ancient traditions. The date of the earliest objects found at the Heræum is in this way removed to a time several centuries before 1830 B. C. While we are not ready to attach as much historical importance to the ancient genealogies as Dr. Waldstein does, and although the application of astronomy to the orientation and dating of Greek temples seems to us not fully demonstrated, we do not hesitate to accept the fact that the site of the Heræum was occupied continuously from a time before 2000 B. C.

The importance of the discoveries at the Heræum is due in no small degree to the fact that they furnish a record of continuous habitation at a site in the heart of continental Greece from the earliest times to the end of ancient civilization. For various reasons, some of which are given by Dr. Waldstein, by far the greater number of terracottas, vases, and metal objects found at the Heræum belong to early times. The publication and discussion of these three classes of objects will occupy the greater part of the second volume of the work, but Dr. Waldstein includes in his general introduction enough description to show the importance of the discoveries made, and enough discussion to awaken the interest of every archæologist in the theories outlined. Of especial interest is the evidence of the persistence of linear ornament, from the earliest hand-made vases with incised patterns through the Mycenæan period and the succeeding centuries. Among the vases and fragments with linear decorations is a large number of the class commonly known as "Proto-Corinthian," for which Dr. Waldstein, following his collaborator, Dr. Hoppin, prefers the name "Argive-Linear."

The detailed publication by Dr. Hoppin of the evidence upon which his arguments in favor of the new name are based will form an interesting part of the forthcoming volume, but in the meantime Dr. Waldstein makes it clear that the Argive plain contained an important manufactory of the vases in question, and shows that these vases occupy a well-marked position in the development of ceramics as seen at the Heræum. The progress of primitive art is traced also in the terracotta figurines; and the successive periods marked out by tradition, by development in architecture, and by progress in ceramics and the manufacture of terracottas, are shown to coincide. On the whole, Dr. Waldstein's introduction, even though one may not agree with him in every detail, presents in a clear light the historical importance of the discoveries made at the Heræum. Other discoveries have in the last few years made the earliest civilization of the Greek islands known, but no other site has furnished so complete a record of the early ages in continental Greece. Many others as well as brave men "lived before Agamemnon."

In the chapter on the Geology of the Heræum Region, by Dr. Washington, the part most interesting to the archæologist is that dealing with the various agencies by which ancient ruins are buried. These agencies are wind, water, volcanoes, man, the earthworm, and plants. Of these, the first and the last seem to have been most active in burying the remains of walls and buildings at the Heræum. The wind carried the dry dust, and with it various seeds, to the Heræum hill, the seeds sprouted and kept the earth from washing away, and, as the plants grew, they arrested more and more dust as time went on.

The chapter on Architecture, by Mr. Tilton, contains a topographical description and survey of the site, careful descriptions of the existing ruins, and reconstructions of the buildings, with numerous figures in the text, and twenty-nine plates. Of the Old Temple, which stood on a terrace above the later structure, a small part of the stylobate was preserved, with the marks of three columns. From these, and a few other indications, Mr. Tilton has restored the building as a hexastyle, with fourteen columns on the side and a cella 36.30 m. long and 8.50 m. wide. The proportions of the naos inside are as one to four. The columns and beams were doubtless of wood and the walls of crude brick. The remaining buildings are, besides the temple erected in the fifth century, four stoas and four other structures, one of Roman date, the various uses of which can no longer be determined with certainty. The whole must have formed, as is seen in the beautiful colored restoration on plate vi., a striking and magnificent group. The temple built by Eupolemus soon after 423 B. C. was a hexastyle, with twelve columns on the side. In the pronaos and the opisthodomus were two columns between antæ. The columns and walls were of limestone coated with fine stucco, but the metopes, pediment figures, cyma-mouldings, and roof-tiles were of white marble. The cyma is beautifully carved in high relief with a conventional anthemion pattern interspersed with Hera's typical bird, the cuckoo-dove. The number of fragments of sculpture from the metopes makes it virtually sure that all the metopes were sculptured. The restoration of the temple is practically certain in nearly all details, though the stylobate is so ill-preserved that no conclusions can be drawn as to its curvatures. Mr. Tilton's careful work in the drawing and restoration of all the buildings deserves high praise, but can hardly be appreciated without the accompanying plates. It is a pity that the restoration of the "East Building," with seven columns across the front, was not incorporated in the general view on plate vi.

With the exception of a few fragments of archaic sculpture and a hardly greater number belonging to statues of the Græco-Roman period, the whole large mass of sculptured marble fragments is derived from the ornamentation of buildings, and belongs to one date and style of workmanship. Since the date of the Second Temple is fixed within a few years at most by the burning of the Old Temple in 423 B. C., the date of the sculptures, as well as the building to which they belonged, is known. Dr. Waldstein, who writes the chapter on Marble Statuary, believes that in the eastern pediment the Birth of Zeus was represented, and in the western pediment the Capture of Troy, while the eastern and western metopes were adorned with scenes from the Gigantomachia and the Trojan war respectively. This arrangement of the sculptures is based upon the words of Pausanias (ii., 17): "The sculptures over the columns represent, some the Birth of Zeus and the Battle of the Gods and Giants, others the Trojan War and the Taking of Ilium." Pausanias certainly seems to indicate that the two scenes or groups of scenes from the life of the gods are at one end of the temple, the Trojan scenes at the other. In his preliminary publication (1892) Dr. Waldstein expressed the opinion that the departure of the Greeks for Troy was represented in the western pediment, the Capture of Troy in the western metopes. This view, which was based upon a misunderstanding of Pausanias, he has now relinquished, and he is led to assign the

Capture of Troy to the pediment, partly, at least, on account of the discovery of an archaic draped torso, "round the back of which a life-sized arm is roughly sculptured—evidently the arm of one grasping the sacred image as a protection against an advancing foe." The proportions show that this fragment belongs to the pediment sculptures rather than to the metopes. Dr. Waldstein therefore concludes that the Capture of Troy was represented in the pediment.

Now in this scene the person who flees to the divine image for protection must be a Trojan, and the image must be that of a deity friendly to the Trojans. But it is difficult to imagine a pediment group so composed that a *xoanon*, standing of course upon a pedestal, could find its place anywhere except in the centre. We should then have the pediment of a Greek temple in honor of Hera adorned with a pediment group in which the most important place was occupied by an image of a deity hostile to the Greeks, and to Hera as their divine champion. Moreover, Dr. Waldstein believes that the figure to which the beautiful head discovered in 1892 belongs, and to which he gives the name of Hera, occupied the middle of the pediment. If this is correct — and the head certainly seems to belong to the pediment sculptures — it is difficult to avoid the conclusion that the *xoanon* clasped by a suppliant must find its place elsewhere. Possibly the *xoanon* may have been a part of some group not belonging to the temple, though the rough work on the back shows that it was not intended to be seen from all sides. However this may be, there are other reasons for assigning the Capture of Troy to the pediment, even though the argument drawn from the *xoanon* fail. Several fragments from the metopes, notably one beautiful head, seem to come from figures of Amazons. Dr. Waldstein therefore believes that the metopes of one side at least of the temple contained scenes from the Amazonomachia, while the metopes of the other side may perhaps have been carved with scenes from the battle of the Centaurs and Lapithæ, though no fragments of Centaurs are preserved.

It would be impossible within the limits of a brief review to give even a summary of Dr. Waldstein's able and suggestive discussion of the style of the Heræum sculptures, and a criticism of his views in detail is out of the question. He is certainly right in mantaining, in opposition to Professor Furtwängler, that the sculptures belong to the Argive school, and more especially to the school of Polyclitus, though whether the great master himself was charged with "the superintendence, if not the designing and elaboration of the sculptured ornamentation of this very temple," as Dr. Waldstein believes, is another matter. The Heræum marbles have the square faces of the works of Polyclitus—they have even the peculiar pouting lips which all the works ascribed to Polyclitus show; but these and other peculiarities may be the marks merely of the school, not of the individual artist. Nor does the recurrence on an Argive coin of the anthemion ornament from the cyma of this temple prove that the *stephane* of the Hera represented on the coin and the ornament of the cyma were designed by the same artist. Both may, for instance, be developments of some earlier tradition. The connection of Polyclitus with the decorative sculptures of the Heræum was probably as close as that of Phidias with the Parthenon sculptures, but how close that was we do not know and probably never shall know. At any rate, the sculptures from the Heræum, even if they are the works of the school of Polyclitus, not of the master himself, enable us to appreciate his qualities as an artist at least as well as do the late copies of his works by which he has hitherto been judged.

The volume before us closes with the publication of Inscriptions on Stone by Professor Richardson and Professor Wheeler, and of Stamped Tiles by Professor Richardson. The work of the editors is carefully and ably done, but the material is of little general interest, and leads to no important results. The editorial committee in charge of the publication has done its work conscientiously and carefully. Only three misprints have met our eye, and of these the only one likely to cause trouble is on page 108, where the name of the River Alpheus is printed "Nepheus." The illustrations are, with few exceptions, remarkably fine. It is a pleasure to study so beautiful a book. The work is dedicated to Prof. Charles Eliot Norton, first President and, we may add, founder of the Archæological Institute. It is eminently fitting that he is thus identified with the most important contribution yet made by American scholars and investigators to classical archæology.

*Haunts of Ancient Peace.* By Alfred Austin. Macmillan. 1902.

*Horæ Solitariæ.* By Edward Thomas. E. P. Dutton & Co. 1902.

Sir Alfred Austin's 'Haunts of Ancient Peace' is an amiable and pacifying work. The narrative of the experiences of a party touring in search of the vestiges of a quieter and less strenuous age, affords the author opportunity to set down many reflections upon the times, relieved by sentiment and gentle humor. In view of the writer's position as court poet, his characterization of a great English statesman who is nameless in his pages, is of sufficient interest to be reproduced here:

"Is it arrogant to ask how is it possible for any serious person to allow himself to be overawed by the opinion of the present Age, for instance, that, for several years, believed a greatly gifted and splendidly energetic man of action, with an imperious but mercurial mind, a sonorous voice, a commanding manner, and a copious but somewhat redundant vocabulary, but no continuity of judgment, no true insight, to say nothing of foresight, and a curiously perverse sense of patriotism, to be not only a Great Statesman, but one of the greatest that ever lived, and considered any one incorrigibly stupid or bigoted who thought otherwise?"

This typical period is scarcely either sinuous or firm, yet it is not devoid of sense. Indeed, throughout the book the author appears to much better advantage in the prose than he does in the frequent lyrics wherewith his personages oblige the company. Yet, when all is said, the volume is a singularly slight affair. We trust we shall not be thought fantastical, or failing in a properly decorous attitude toward his Majesty's Laureate if we venture to suggest that 'Haunts of Ancient Peace' is most happily described in three lines from a poem pronounced by one of the party:

> "Nothing stirring, nothing doing,
> Save white clouds white clouds pursuing,
> And the ringdove's lovelong cooing."

We come to metal of a clearer tone in Mr. Edward Thomas's 'Horæ Solitariæ.' Mr. Thomas's thought is not robustious, his writing is still somewhat too obviously mannered; yet his work shows unity and distinction of mood, and a conscious striving after that "lapidary economy" of style which he admires. The fifteen essays, including such taking themes as "Inns and Books," "Epitaphs as a Form of English Literature," "The Passing of Pan," and "Digressions on Fish and Fishing," are very judiciously made up of leisurely rumination, weighted with timely allusion, both literary and humane, and tempered by bookish, but playful and unaffected, humor. Once or twice in the slender volume one comes upon a passage which mellow music and coursing imagination make fit to rank with the best of De Quincey. At such times Mr. Thomas's writing exhibits a definiteness of form which makes it more truly masculine, and hence more thoroughly satisfying, than most composition of this species. The elect readers who are accessible to such charms may justly expect much of a young writer who unites scholarship and sensibility; who can compass, though it be as yet but momentarily, the effect of "Celtic magic" by brooding, Virgilian workmanship.

*The Administration of Dependencies:* A Study of the Evolution of the Federal Empire, with special reference to American Colonial Problems. By Alpheus H. Snow. G. P. Putnam's Sons. 1902.

This book is written for the purpose of establishing the paradox that our "Revolutionary forefathers" were imperialists in the sense in which that word is now commonly used. So far from believing that there was no just government without the consent of the governed, they clearly contemplated, and deliberately provided for, government of this kind by the Congress of the United States. In spite of the cry "No taxation without representation," there was in 1775 a substantial unanimity of sentiment in Congress that Great Britain ought to levy taxes in the colonies. The great question which agitated the minds of American statesmen "was whether the British Empire was a Federal Empire or a Unitary State." They were willing to remain in the empire, if it should be declared to be a "Federal organism," in which the power of the imperial State was not a "limited" but a "conditional" power, the subjection of the colonies being a "conditional subjection." Their subjection was under an "implied" contract, to the terms of which both parties agreed, and which was conditional in exactly the same way as if the contract had been between equal parties.

These conclusions, it is maintained by Mr. Snow, were involved in the approval by Congress of Gouverneur Morris's pamphlet, entitled, 'Observations on the American Revolution,' which appeared in 1778:

"The final word of the American Union to Great Britain, therefore, was a declaration that the States of the Union would never consent to anything less than a Federal subjection to the State of Great Britain—that is, a contractual or conditional subjection, not of the inhabitants of the States of

the Union to the State of Great Britain, or to its Government, or to its inhabitants, but of the States of the Union, as States, to the State of Great Britain. By this declaration, made almost contemporaneously with the declaration contained in the French treaty of alliance that the American Union proposed to hold its conquests as dependencies, the American Union bound itself, and its successors, forever, by all the obligations of national good faith, to treat every community external to and connected with the Union as a State in a relationship of Federal subjection. . . . In case of disagreement between the parties concerning the interpretation of the contract, or concerning what was just and reasonable, when the parties left the terms indefinite, it was to be interpreted and adjudicated by an impartial expert tribunal."

Adopting Mr. Snow's conclusions, we find them fatal to the present claims of Imperialists. The people of the Philippine Islands, in their struggle against the Government of the United States, are situated as the people of the American colonies were in their rebellion against British rule. To say that our "implied contract" with the inhabitants of these islands has been interpreted and adjudicated by an impartial expert tribunal, is an assertion that can hardly be taken seriously. If George III. and his Ministers constituted such a tribunal at the time of the Revolution, the proposition might be admitted, but no one would maintain that theory. It is essential to the concept of a contract that there should be two contracting parties, and that their minds should meet. With some straining, we may say that a contract existed between the colonies and Great Britain; but we cannot seriously maintain that the wretched people whom our troops have been slaughtering on the other side of the globe, had entered into any contract with our Government. If anything could make them smile in their distress, it would be to hear such a theory expounded.

But if Mr. Snow's theories survive these difficulties, he gives them the *coup de grâce* by his view of the competency of Congress to administer dependencies. His whole Constitutional argument rests on the Ordinance of 1787 for the government of the Northwest Territory, and the clause in the Constitution providing that Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States. In his final chapter, however, Mr. Snow declares that to apply this provision would be to establish, "when viewed from the standpoint of the dependencies," an administration by an oligarchy of foreigners. In order to discharge its duty, Congress would have to sit continuously. It would be incompetent in many ways to carry on colonial government. We do not question this, but we need not suppose that Congress will abdicate its functions because Mr. Snow thinks it cannot properly discharge them. It may turn them over to the President; but it will not do so without making sure of the patronage. The "idea of the Imperial power," Mr. Snow asserts, "implies opening new markets, not for the Imperial State, but for all the world." Such is not the idea of Congress, or of the Republican party, or of the American people.

Notwithstanding the display of research in the citation of ancient documents, we cannot regard this work as giving correct views of the past. We are told that France, for eight centuries before the Revolution, or until the seventeenth century at least, had a good and orderly government. It had a "harmonious" connection with its colonies, profitable to it, and beneficial to them. The necessary adjustments were made judiciously and advantageously. France "consulted the wish of the dependencies and regarded their interests." This just solicitude, it will be remembered, was shown by granting monopolies to exploiting companies, by forbidding the colonists to manufacture their own products or to buy goods not made in France, by restricting trade to French vessels, and by many like regulations.

Up to the year 1750, no one in the American colonies, according to Mr. Snow, "appears to have dreamed that there was anything which was not dignified, just, and proper" in their relationship to Great Britain. It was in 1750, by the way, that Great Britain forbade the manufacture of iron in the colonies. But it would be a waste of time to expose the evils of the colonial administration which Mr. Snow regards with such favor. His theories concerning "implied contracts" and "moral obligations"—"contracts" made, construed, and applied by a strong power in effecting conquests, and "obligations" to itself alone—are mere sophistry. He declares explicitly that the United States can levy taxes on its dependencies and enforce their collection, although it thus becomes a judge in its own cause. But Mr. Snow naïvely continues; "Where one is obliged to judge in his own cause, such obligation increases enormously the moral responsibility." Of course the familiar goody-goody talk follows, about the trust which the American people have assumed, and the necessity of providing means "for educating the public sentiment so that the people of the American Union may be in position to superintend both the President and Congress." This comprehension of their high responsibilities by seventy-five millions of people is to be brought about largely "by object-lessons, through expositions and museums."

---

*The Growth and Decline of the French Monarchy.* By James Mackinnon, Ph.D. Longmans, Green & Co. 1902. Pp. 840.

The industry and facile pen of Dr. Mackinnon give us this thick volume on France in close succession to large works on Edward III. and the union of England and Scotland. The present disquisition (for the book is more an essay than a chronicle) begins with the coronation of Hugh Capet, and closes at the death of Louis XV. The study, as the preface tells us, was undertaken with reference to the origins of the Revolution, but it has so far branched out from this purpose as to have a different character from that which was at first designed.

"I became engrossed in my subject," says the author, "apart from its direct bearing on the Revolution. I studied it, in fact, for itself rather than for its ultimate effects. I found myself looking at each successive reign from the standpoint of its effects on its period rather than on the future, though I have emphasized the prospective tendency of events and institutions as I proceeded. In other words, I have made a study of government in France, under the old régime, in its relation to the nation for the time being."

So much may be cited to convey Dr. Mackinnon's explanation of his chief aim. For our own part, we must say that this book appears to rest upon a radically unsound basis, or at least that the method pursued is not one which helps us to understand the growth and decline of monarchical institutions in France. Dr. Mackinnon has not sought to describe the development of institutions.

"It is of government," he says, "in connection with contemporary history, that I have treated—a very different, and, as I believe, a far more important subject. It is with the actual operation rather than with the mere form of institutions that I am concerned. It is a question of minor importance in my view, whether, for instance, the Council of State was composed of so many individuals, or of so many subordinate councils, compared with the question whether its acts affected France, for the time being, for good or evil."

In criticising this statement, we shall admit that administrative forms and the routine of bureaucracy need not be taken up at any great length in a general historical treatise. At the same time, the state is an organism, and the rise of the main political institutions should be seriously considered. The mediæval part of this volume is extremely meagre and altogether inadequate. The five centuries from Hugh Capet to Louis XI. receive one hundred pages, the three centuries from Louis XI. to Louis XV. receive seven hundred pages.

This disproportion is excessive, but it is not all. It might have been possible, even in a hundred pages, to show how the Capetian monarchy took form and how it strove with the forces of feudalism; but throughout the whole of this section the treatment is essentially superficial. For a single example we shall quote, in part, Dr. Mackinnon's comment upon the eleventh century—a cycle which is dismissed in half a page; "The eleventh century is a century of pure anarchy in France, with most tragical results to the miserable people, who had no rights and seldom knew what happiness was. The chronicles of the time are grim reading indeed, with their oft-recurring story of famine driving men even to cannibalism, of pestilence, brutality, murder, crass superstition, and leaden, heartless oppression." A passage like the above almost takes one's breath away. To be sure, the eleventh century was in many respects a rough and brutal age, but, judged by the test of relative improvement, it will stand comparison with any period of equal length since the decline of the Roman Empire. Not only was Western Europe ablaze with the fire of improvement, but France was a very beacon, as the history of Cluny, of Normandy, of the communes, of Romanesque architecture, and of the First Crusade attests. To say that "the eleventh century is a century of pure anarchy in France" is to dogmatize in great haste and with little thought.

Our main proposition, however, is that Dr. Mackinnon adopts a wrong attitude towards the evolution of institutions. Though purporting to deal with the rise of the French monarchy, he does not show satisfactorily how it took form in the Middle Ages and drove its roots deep into the national soil. By neglecting the institutional side, he fails to bring the monarchical institutions of France into comparison with those of other countries at the same period. The result is, that we get a somewhat miscellaneous narrative, which is

studded with energetic passages, but runs to declamation where it should be soberly tracing the operation of processes.

We have not hesitated to express thus plainly an unfavorable opinion of Dr. Mackinnon's method. So far we have confined our strictures to the mediæval portion of his work. As he advances, he gets into closer touch with his subject, and the book improves; but throughout there is a failure to explain the organic growth of the monarchical institution. On the other hand, there is much in the book which is better than the treatment of its leading theme. Dr. Mackinnon seeks above everything else to connect the monarchy with the nation at large.

"Most important of all," he says, "is the effect of the exercise of the monarchic power on the people. The grand test of the value of any government is contained in the question, What did it do for the people? Did it contribute to its elevation, its welfare, its happiness, in the widest sense, or did it not? Practically every other question is subordinate to this, and I shall have entirely missed the mark if I have not made it clear, all through, whether the government of the French monarchs served, not the aggrandizement of France or the grandeur of this or that individual who happened to wear the French crown, but the grand purpose of the general interest."

With this appreciation of the value which belongs to social history in its relation to the history of politics, one must heartily sympathize, and Dr. Mackinnon does from time to time discuss the effect of government upon the masses. Still, even here expectation is not quite realized, for the courtiers and politicians are more to the fore than the people. The best features of the work are, in our judgment, these: Dr. Mackinnon has a considerable range of reading and writes with evident love of his task. Secondly, he is alive to the importance of social and economic questions. Thirdly, he shows a degree of interest in the emergence of fresh political ideas which he does not show in the development of political institutions. From the time of Henry IV. forward, this ample volume contains much material which students will find means to use, but we must confess that we have found the earlier portions of it disappointing.

---

*Thoreau: His Home, Friends, and Books.* By Annie Russell Marble. Thomas Y. Crowell & Co.

Mr. Sanborn's later study of Thoreau is still recent, and, on the eve of a third and enlarged edition of Ellery Channing's 'Thoreau,' we are confronted by a new writer venturing boldly into the once lonely field. Some time since, Thoreau attained to the glory of a *de luxe* edition, and his vogue has other and more healthy signs of growth. A host of writers swarm upon his track, who are not so much imitators as disciples quickened to a studious love of nature by his spirit. The whirligig of time is bringing many exquisite revenges on that season of inappreciation when, with straining back, he carried seven hundred copies of 'The Week,' that had been returned to him as unsalable, to an upper room. But the swelling chorus of repentance has heretofore had no voice so out of tune with Thoreau's character and mind as that of Mrs. Marble. Her manner of writing affects us the more painfully because it is so often brought into contrast with Thoreau's English, "caught," as Lowell wrote, "at its living source, among the poets and prose-writers of its best days." It is remarkable that she could soak her mind in Thoreau's books and take on so little of their virile tone. Her own style is distinctly young-ladyish. To words that smack of the soil she has a particular aversion. She delights in such as are pretty and sesquipedalian, in such tinsel forms as "basal" and "fontal," and such compounds as "view-points" and "heart-life." A good many adjectives are or appear to be introduced, because they sound nicely, without any reference to their meanings. In general, we do not get the impression of a natural affinity with Thoreau's work, but of an accidental inclination to him as a good subject for a book. With plenty of good sources, our author permits herself such a congeries of inaccuracies as this, where she is writing of Thoreau's friend, H. G. O. Blake:

"He had been in Harvard when Thoreau was there, graduating from the Divinity School in 1839, when Emerson, by his famous address, sent quivers of apprehension through Calvinistic creeds. Mr. Blake became deeply interested in Emerson, and adopted many of his theological tenets. He was himself a preacher at Milford, New Hampshire, when Emerson resigned his pastorate and received such sharp censure, especially from Professor Norton."

The necessary corrections are, that Blake graduated in 1838, when Emerson's address was delivered to the graduating class—that the address delighted the Calvinists because it enabled them to say to the Unitarians, "Where are you now?"—that it was this address which drew Mr. Norton's censure, "The Latest Form of Infidelity," the following year—that Emerson's resignation of his pastorate was then ancient history, having occurred in 1832, when Blake was but sixteen years old.

We do not find much in the way of incident or comment in Mrs. Marble's book with which the Sanborn and Channing books have not already made us acquainted. There is scant acknowledgment of their help, with frequent vaunting of the writer's novel acquisitions, some of which are interesting and valuable, but injured by the awkward setting which attempts to give them prominence. At many points there is a courageous and often just demur at the judgments expressed by earlier biographers and critics, and, throughout, the writer's aim, in so far as it is controversial, is to relieve Thoreau from the character of eccentricity which has burdened him, in good part because of his own humorous exaggeration. The "view-point" in this particular is less original with Mrs. Marble than she would proudly fancy it: she is able to make liberal quotations from her predecessors in defence of her position. But her reiteration does not come amiss.

A second reading of the book, after one had learned to discount the writer's foibles, and to be more amused than irritated by her wordiness, would yield a rather favorable opinion of its main effect. It is convincing that Thoreau was not misanthropic, and no convert to Rousseau's gospel of a return to nature as the solution of the social problem. He found the Maine woods less to his liking than the humanized Concord fields. "What is nature," he said, "if there be not an eventful human life passing within her? Many joys and many sorrows are the lights in which she shows most beautiful." This quotation, though much to Mrs. Marble's purpose, is one that she has overlooked. But she has others to the same effect:

"I think that I love society as much as most, and am ready enough to fasten myself like a blood-sucker for a time on any full-blooded man that comes in my way. I naturally am no hermit, but might possibly sit out the sturdiest frequenter of the bar-room if my business called me thither."

This does not counter the Walden episode so much as the popular misconstructions of that "experiment." A good deal of satire has been wasted on Thoreau's frequent visits to Concord and his meals there with his family and friends. He knew very well what he was about, as the success of Walden proved. It is true, as one of his students has written, that he "represents himself as an epicure rather than an ascetic." He did not wish to be amenable to the criticism of Emerson's "Days," but to get the best afforded and to pass it on. "I would fain communicate the wealth of my life to men, would really give them what is most precious in my gift. I will sift the sunbeams for the public good." The simplification of life was the main haunt of his thought and purpose. He would disengage himself from those social trappings which are commonly regarded as advantages, but are actually encumbrances. His protest is needed now much more than it was when he first uttered it, and one would gladly be assured that the increasing interest in his writings means that his teachings are being taken seriously to heart by a great many people.

---

*Through Hidden Shensi.* By Francis H. Nichols. Charles Scribner's Sons. 1902.

It is almost a commonplace among would-be authors who sojourn as diplomatists and intelligent men in the professions and trades, that there is no better time for the writing of a book on the strange country they live in than when one has just arrived. Even the late S. Wells Williams once told the reviewer that the time when he felt most like writing a book on Japan was when he had been in it—or, rather, partly on and partly off, but near it (in Perry's expedition)—during six weeks. This seems to be the real secret, or at least one of the chief reasons, of the fascinating quality of Mr. Nichols's new book on a very old subject, as his map shows. Leaving Pekin, October 16, he reached "Sian," the extreme western limit of his journey, beyond the bend of the Yellow River, November 14, and, floating down the great Yang-tse-kiang, he reached Shanghai December 22. He went to China to carry the benevolent contributions of Americans to the sufferers by the famine in Shensi, and was on the move most of the time. He had observing eyes, an alert mind, and a ready purpose to enjoy everything he possibly could, and he certainly knows how to make his story thoroughly interesting.

In Pekin he received the red visiting card of Prince Ching, which proved an "open sesame" everywhere, and worth more than all other official documents. With the help of a Scottish missionary, Mr. Duncan, he was able to reach his goal and carry out the eminently Christian pur-

pose of his patron, the proprietor of the *Christian Herald*. He visited the Nestorian tablet, the refuge camps, and a few interesting places besides, suffered the usual trouble with tenants other than human that preoccupy the bedclothes of China, had no extraordinary adventures, and yet he tells a story which is attractive on every page. The region which he visited has been of special interest of late, because of the flight thither of the court of Pekin during the Boxer troubles, and the imperial residence there for over a year. Furthermore, Shensi, being the oldest part of civilized China, is interesting in itself, as showing Chinese life in its quintessence as continued through scores of centuries with but little change.

Yet to Mr. Nichols the chief impression was of the variety that there is among the Chinese. Before entering China, he, like other Westerners, had thought of its inhabitants as a people homogeneous in body, mind, and outward estate. His surprise was great in finding a wonderful variety. They were different according to their physical environment and inheritances; one province being in many things no standard for another. In a word, he discovered that here were many tribes of differing origin, history, experience, and religion, while all apparently dissolved in the same solution wrought by language, customs, and social ideas. Beyond the seaports he quickly discovered that foreign influences had but a minimum power of penetration. Even the telegraph to Sian was never taken seriously until after the coming of the court, which then kept the wires busy. Now the merchants and other people strain the resources of the local office, and four operators are necessary. He learned that the usual way of showing opprobrium, when one Chinese was angry with another, was to call out "Japanese." This the author thinks is a survival of the time when "the land of the Mikado was a tribute nation," but this, we can assure Mr. Nichols, has no historic basis, or at least none better than that which, in China only, asserts that the British, Americans, Germans, French, and Dutch are tribute nations. The term is derived rather from the fact that the Japanese pirates and marauders, for so long a time, centuries ago, kept desolate the coasts of China.

Mr. Nichols was charmed with the humanity and good morals of the average Chinaman. His previous notions, instilled in the Sunday-school and by the American newspapers, were all set awry by the kindness which he received, and of which among the natives he was a constant witness. He was surprised at the bright eyes and ruddy cheeks of the children in the interior. He notes the general absence of enduring monuments of China's antiquity, but sees proofs of the nation's great age in the landscape itself, especially in those deeply sunken roads, often thirty feet below the level of the fields which have been rutted to such depth by the wheeled traffic of centuries. In his philosophy of the subjects which he handles jauntily, we cannot usually agree with him. He saw only the crowded lines of traffic and places of habitation, and land which for the most part is fertile, and therefore densely populated. One may gain an entirely wrong idea from some of his statements, which need a work like that of 'An American Engineer in China' for correction. As matter of fact, the densest population is massed on the fertile plains and in the river valleys, while large portions of China proper and even more of the Empire at large are but thinly inhabited. The introduction of railways would have the same effect in China, as elsewhere, in distributing the population more equally. New industries and methods of transit would at first paralyze old methods of livelihood, but adjustment would come in due time, nor is there any reason to think to the contrary because almost without exception the former boatmen on the Pei-Ho River were Boxers (p. 305).

A glow of humor lends added brightness to many pages. Mr. Nichols is at his best in describing the mandarins and the play of Chinese human nature in every-day life. His quiet manner of calling attention to things that are very "heathen" in Western ideas, but very Christian in reality, is highly effective. He is moderate and self-controlled in describing the famine-desolated districts, though his description of the sale of meat balls made from the bodies of human beings who died of hunger, and sold for four cents a pound, is sufficiently realistic. As a result of famine conditions, dysentery and cholera broke out and swept away thousands who had escaped the worst rigors of hunger. More terrible to witness even than famine-devastated districts are the villages inhabited by the victims of opium smoking.

The illustrations in this work are uncommonly good, and somewhat out of the common run. Those which reproduce for us the Nestorian tablet, give also the top portion containing the cross, as well as the Syrian and Chinese text. The analytical table of contents, map of the journey, and a very full index complete a fine piece of literary workmanship, and a most delightful narrative of travel, fresh, piquant, and enlightening.

---

*John Ruskin.* By Frederic Harrison. Macmillan Co. 1902.

Mr. Harrison touches nothing that he does not adorn. Such an adept in the art of writing could make even an ordinary man seem worthy to be enshrined in the "English Men of Letters" series; and when he has a subject like John Ruskin, the result is a magnificent apotheosis. Ruskin, he tells us, was the writer of the Victorian era who poured forth the greatest mass of literature upon the greatest variety of subjects, and about whom most was written in his own lifetime in Europe and in America. Many biographies of him already exist; but, as Mr. Harrison says, the matter available is still abundant. It is certainly well that he himself was chosen for this task; for by admiration, affection, common ideals, aims, and sympathies, he is exceptionally qualified.

Ruskin's place as an artist, and as a critic of art, is too well known to require much to be said of it, and Mr. Harrison attempts little more than to characterize briefly the great books which first made the young author famous. He expatiates more, and perhaps sufficiently, on Ruskin as a social reformer. He admits that Ruskin's diatribes were full of sound and fury, but finds them significant of something. The chief principle of the political economy of this modern prophet was that "the conditions producing material wealth are inextricably intermingled with the general conditions of a healthy and worthy body politic." Probably no human being, whose opinion is worth having, ever denied the substance of this proposition. We might almost say that none ever thought it necessary to assert it as a profound truth. But if the conditions producing material wealth are really so inextricably intermingled with others as to admit of no disentanglement by scientific methods, political economy is of course impossible until sociology has been developed. So far, Positivism is in harmony with Ruskinism; but very few people think that sociology has advanced enough to be applied practically.

As to what Ruskin accomplished in his promiscuous polemics, Mr. Harrison is explicit enough. Ruskin, he declares, was utterly unfitted to construct a social philosophy, by his very scanty learning, by habit, and by the cast of his mind.

"He can only throw forth a few suggestions, more or less echoes of Plato, the Bible, mediæval art, and Carlyle. Nothing less adequate as a coherent and systematic synthesis of society can be imagined. He, the self-taught, desultory, impulsive student of poetry and the arts, rushes in to achieve the mighty task which Plato, Aristotle, Aquinas, Leibnitz undertook—and failed, and which Locke, Kant, Hume, and Bentham touched only in sections."

It is quite true that Ruskin asserted many truths, and advocated some social changes that have been made. But it was a haphazard process, and the task of reconciling his utterances with one another and with facts would be as futile as that of the commentators who act on the theory that the Hebrew prophets knew what the history of the world was to be. Carlyle said that Ruskin had a "divine rage against falsity," and he constantly prophesied in the name of Truth. In fact, few writers have ever shown a more reckless disregard of truth. His pages are crammed with false statements of fact, and with grossly libellous accusations. He was destitute of the "scientific conscience," which has sternly consigned so many pretty hypotheses to oblivion, and which recognizes nothing as true until it has been proved by the severest tests which reason can apply. He preached of sweetness most bitterly; he praised thoroughness, and never attempted to ground himself in political science; he raved of a past which he absurdly misinterpreted, and he rhapsodized over a future which is grotesquely impossible. It was said of Sir Isaac Newton that his commentary on Revelations was apparently meant to console the human race for the superiority he had over it; and Ruskin's political disquisitions may cause the humblest reader to think better of his own intellect.

Rightly viewed, Ruskin's essays in social reform are like music, appealing, not to the reason, but to the emotions. During most of his life he was nearly insane, and his cerebral disease became several times acute. Doubtless this explains why he seems—

> "——that delirious man
> Whose fancy fuses old and new,
> And flashes into false and true,
> And mingles all without a plan."

From such a mind we must not expect system, or reason; but we may get, and many thousands have got, inspiration. The ar-

rogance, the scorn, the hatred, the vituperation; the crudities, the absurdities, the falsehoods—all these may be overlooked because of the seraphic music of the style, because of the coruscating wit, because of the incomparable wealth of allusion and suggestion. For these we must go to his books; but those who would have a critical estimate of them, and those who would learn what manner of man their author was, will appreciate Mr. Harrison's essay. His judgments are merciful, but not too partial, and if he goes far in his extenuation, it is a generous fault. As a Positivist, he is sufficiently detached to criticise schemes of social reconstruction with intelligence; and as a man of letters, his competency to judge of literature has been amply proved.

---

*The Origin and Significance of Hegel's Logic:* A General Introduction to Hegel's System. By J. B. Baillie. Macmillan Co. 1901. 8vo, pp. xviii, 375.

This book is, on the whole, of any that we have seen, the most helpful for a student prepared to take up the study of Hegel. It is not designed as a substitute for reading Hegel's own works, but, as the title-page proclaims, as an introduction to such reading. It explains how Hegel's 'Phänomenologie,' 'Logik,' and other works came to be written, which is what the student of any system should desire to learn, first of all. In saying this, we are supposing that the student is not a neophyte in philosophy. When a man first takes up the study of philosophy, his difficulty, at the outset, is that he is already possessed by a crude system of metaphysics, and that, while he has a vague curiosity to know why others do not think as he does, he really has no desire to learn. After that first difficulty is conquered, he has to make a study of some one system of philosophy, which, however, it is impossible for him really to understand at this stage, because he does not comprehend the original state of mind of the author at the time his original studies were begun. In the case of Hegel he must, as a matter of course, understand Kant, and especially the deduction of the categories, not only as his doctrine appeared to Kant himself, in his two editions, but as it appeared to the young theological students who read it while it was fresh. He will necessarily make some study of Fichte's 'Wissenschaftslehre' and of some of the earlier writings of Schelling. He can then take up this book of Dr. Baillie's with profit, and thereafter the study of Hegel (in German, of course, for the 'Logik' is, in a sense, a dissertation on the German language) will not present any insuperable difficulties, unless Hegel's own inaccuracies be considered such. In particular, he should have carefully read Dr. Baillie's admirable concluding chapter, entitled "Criticism." His only danger will then be that of overlooking, what Hegel entirely overlooks and Dr. Baillie does not distinctly recognize, that thought and "immediacy" are not the only factors of experience. To avoid that danger he ought to be penetrated with the spirit of science, to understand English thought, that of Herbart, that of Fries, and be well acquainted with modern exact logic.

Hegel is a vast intellect. The properly prepared student cannot but feel that the mere contemplation of the problems he presents is good. But that the study of Hegelianism tends too much toward subjectivism, and is apt to break that natural power of penetrating fallacy which is common to all men except students of logic, especially of the German stripe—seems to be the result of experience.

## Books of Permanent Value.

### Life and Letters of H. Taine. 1828-1852.

Translated from the French by MRS. R. L. DEVONSHIRE.

12mo, 326 pages, $2.00 net. Postage, 10 cents.

"This is a strong, manly, and healthful book—the picture of a noble mind, reflective and full of philosophy, particularly instructive and suggestive in a rushing, struggling, sciolistic age like the present."—Daily Telegraph.

### The Home Aquarium And How to Care for It.

**A Guide to its Fishes, Other Animals, and Plants,**

WITH MANY ILLUSTRATIONS.

**By EUGENE SMITH.**

12mo, 224 pages, gilt top. $1.20 net. Postage 11 cents.

It is a genuine book from beginning to end, abounding in just such information as a novice needs, and full of interesting facts about the animals and plants that are adapted to the aquarium, and how to take care of them."—The Independent.

### The Law of Copyright

**In the United Kingdom and the Dominions of the Crown, and in the United States of America.**

**By E. J. MACGILLIVRAY, LL.B.**

8vo, cloth, $8.00 net. Postage, 23 cents.

"Everything relating to the subject has been digested into an admirable text-book, comprehensive and clear. He has produced a much needed work, the standard work on its subject."—Outlook.

### A Glossary to the Works of Shakespeare

**By ALEXANDER DYCE.**

The reference made applicable to any edition of Shakespeare, the explanations revised and new notes added.

**By Harold Littledale, M.A.**

8vo, cloth, $3.00 net. Postage, 24 cents.

A much needed revision of a famous work of reference which brings the work into conformity with modern scholarship.

### Tiberius the Tyrant

**By J. C. TARVER.**

8vo, cloth, $5.00 net. Postage, 17 cents.

"A valuable and entertaining book. The preliminary chapters give an admirably lucid account of Rome's transition from a Republic to an Empire."—Spectator.

"The book is one of manifold interest, fitted to attract and instruct the general reader as well as students of government, of economics, and of the classics."—Nation.

### An Anthology of Victorian Poetry

Edited by the Rt. Hon. Sir

**MOUNTSTUART GRANT DUFF.**

8vo, cloth, $2.50 net. Postage, 17 cents.

"Nothing could more tellingly attest the literary richness of the Victorian Reign than this Victorian Anthology, a carefully edited and handsomely printed volume, which well fills its honorable station and will commend itself for many reasons to collectors and readers of the best English poetry of the last century."—Literary World.

## The Oxford History of Music.

Vol. I. The Polyphonic Period. Part I. Method of Musical Art, 330-1330. By H. E. WOOLDRIDGE, M.A. 8vo, cloth, extra, $5.00.
Vol. III. The Music of the Seventeenth Century. By C. HUBERT H. PARRY. 8vo, cloth, extra, $5.00.

In a review of Vol. I. *The Churchman* says: "It is certain that the author has succeeded in giving to musical students by far the most important as well as the most readable treatise on mediæval music that has appeared in the English language."

"It is one of the clearest, best digested and best fortified presentations of a difficult subject that is to be had."—*N. Y. Tribune.*

## The Complete Works of John Gower.

Edited from the Manuscripts with Introductions, Notes and Glossaries, by G. C. MACAULAY, M. A. *Just published.* Vol. IV. The Latin Works. 8vo, buckram, $4.00.

## De Necessariis Observantiis Scaccarii Dialogus.

Commonly called Dialogus de Scaccario. By RICHARD, Son of Nigel, Treasurer of England and Bishop of London. Edited by ARTHUR HUGHES, C. G. CRUMP, and C. JOHNSON. 8vo, cloth, $4.00.

## The Part of Rheims in the Making of the English Bible.

By JAMES G. CARLETON, D.D. 8vo, cloth, $3.15.

## The Lay of Havelok the Dane.

Circa A. D. 1310. Reëdited from the Unique Ms. Laud 108, in the Bodleian Library, Oxford. By the Rev. WALTER W. SKEAT, Litt.D., etc. Extra F-cap, 8vo, cloth, $1.10.

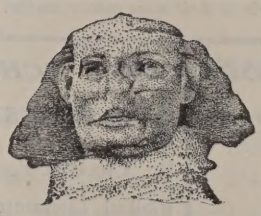
## SOME OF LITTLE, BROWN & CO.'S NEW BOOKS



*"As vivid and lifelike as Quo Vadis."*

## The PHARAOH and the PRIEST

Alexander Glovatski's powerful portrayal of Ancient Egypt, translated by Jeremiah Curtin. Illustrated, 12mo, $1.50.

A series of gorgeous pictures and vivid episodes.—*N. Y. Herald.*

No novel of ancient Egypt, and perhaps no history, will convey so accurate an impression of the real life of the time as "The Pharaoh and the Priest."—*Chicago Chronicle.*

### THE STRUGGLE FOR A CONTINENT.

Edited from the writings of Francis Parkman by Prof. Pelham Edgar. Illustrations, maps, etc. 12mo, $1.50 net. Postpaid, $1.67.

The work has been accomplished with remarkable skill and fidelity. We do not remember to have seen a feat of this sort done with such success.
—*Chicago Tribune.*

### AMERICAN LITERATURE.

In its Colonial and National Periods. By Prof. Lorenzo Sears of Brown University. 12mo, gilt top, $1.50 net. Postpaid, $1.66.

A peculiarly interesting volume for the student of our own literature. Prof. Sears' survey is brought down to date, but its chief interest lies in its comprehensive treatment of the colonial period.
—*N. Y. Commercial Advertiser.*

### GLIMPSES OF CHINA AND CHINESE HOMES

By EDWARD S. MORSE, author of "Japanese Homes and Their Surroundings." Illustrated by the author. 12mo, gilt top. $1.50 net. Postpaid, $1.63.

An unusually attractive book . . . Despite his modest disclaimer he used his eyes during his short stay in China to better purposes than most travellers who had better opportunities. He knew what to look for and what to describe.—*N. Y. Sun.*

# New and Important Scribner Books

## PUBLISHED YESTERDAY

### FRANK R. STOCKTON'S New Book

## JOHN GAYTHER'S GARDEN

*And the Stories Told Therein*

A volume of eleven new stories in Mr. Stockton's most amusing manner, all of them connected by a thread of narrative that gives unity to the whole. The book is one in which Mr. Stockton took a great personal interest, and it will be presented exactly in accordance with his own arrangements for its publication. $1.50

### A Nonsense Anthology

Edited by CAROLYN WELLS, author of "The Jingle Book," etc., $1.25 net. (Postage 11 cts.)

The first adequate anthology ever attempted. The Kings of Nonsense, English and American, are represented by extensive quotations of their most delectable achievements, and not only they, but the lesser lights as well, so that this volume stands for all that is representative and delightful and best in this mad-cap department of humor. An amusing analysis of nonsense, as an introduction, greatly assists the reader's appreciation.

### Mountaineering in the Sierra Nevada

By CLARENCE KING. With Maps. 12mo, $1.50.

A new edition of a unique book. The late Clarence King was not only an eminent geologist but a writer of real and romantic genius, and this, his most important literary work, which has been long out of print, is remarkable for its general human and artistic interest, as well as for its value as a record of scientific exploration. It is a classic of humor, of romantic adventure, of nature descriptions rivalling Ruskin in vividness and power.

### A Literary History of Persia,

*from the Earliest Times until Firdawsi*

By EDWARD G. BROWNE, M.A., M.B., Lecturer in Persian in the University of Cambridge. 8vo, $4.00

Not so much an account of Persian literature in the narrower sense, as a history of Persian thought and the part played by Persians in the sphere of religious, philosophical and scientific speculation. Therefore, not only the literature of modern Persia is here discussed, but, to some extent, the old Persian, Avestic, and Pahlavi writings, and, more fully, the vast contributions made to Arabic literature by Persian scholars and writers, who, to the Mongol invasion almost exclusively, and to the present day very largely, have made use of it as the vehicle of their more serious studies.

**Previous Volumes of This Series**

A LITERARY HISTORY OF IRELAND
By DR. DOUGLAS HYDE. $4.00

A LITERARY HISTORY OF INDIA
By R. W. FRAZER. $4.00

A LITERARY HISTORY OF AMERICA
By BARRETT WENDELL. $3.00

*TWO NEW BOOKS FOR SCHOLARS*

### The Essence of Christianity. A Study in the History of Definition

By Professor WILLIAM ADAMS BROWN, of Union Theological Seminary. Large 8vo, about $1.50 net. (Postage 16 cents.)

In this important volume, Professor Brown analyzes the great question "What is Christianity?" showing what it involves and giving an account of the more important answers which it has received in the course of history, and indicating why it is so largely a modern question. Special attention is given to Ritschl and his school.

### The Messages of Israel's Lawgivers

By CHARLES FOSTER KENT, Ph. D., Woolsey Professor of Biblical Literature in Yale University, $1.25 net. (Postage 11 cents.)

The basis of this work is a scientific codification and interpretative paraphrase of the laws found in the Old Testament. Concise introductions present the steps in the different codes and the modern conclusions regarding the origin, history and significance of the individual customs and laws. It is a new volume of Messages of the Bible.

### The Private Soldier Under Washington

By CHARLES KNOWLES BOLTON, Librarian of the Boston Athenæum. Fully illustrated from original sources. $1.25 net. (Postage 18 cents.)

CONTENTS: I. Origin of the Army.—II. Maintaining the Forces.—III. Material Needs.—IV. Firelock and Powder.—V. Officer and Private.—VI. Camp Duties.—VII. Camp Diversions.—VIII. Hospitals and Prison Ships.—IX. The Army in Motion.—X. The Private Himself.

*A BRILLIANT STORY*

### Vive l'Empereur

By MARY RAMOND SHIPMAN ANDREWS. Illustrated in color by F. C. Yohn, $1.00.

The historical side of this story is a suggestion from some half-told Napoleonic legend. It is a most stirring love-story and in addition is full of amusing character and incident. The most of the action takes place in an old castle on the Irish coast. A son of Marshal Ney is the young lover in the tale.

### New Amsterdam and Its People:

*STUDIES SOCIAL AND TOPOGRAPHICAL OF THE TOWN UNDER DUTCH AND EARLY ENGLISH RULE*

By J. H. INNES. With maps and plans, and with many views, portraits, etc. Large 8vo, $2.50 net. (Postage 16 cts.)

# *Sally Wister's Journal*

SALLY WISTER, 16 years old, daughter of Daniel Wister, merchant, of Philadelphia, kept a journal of her experiences during the winter of 1777–1778, while exiled from Philadelphia during its occupation by the British. The family lived with relatives in an old farm house on the Wissahickon, which was occupied at times by various prominent officers of the Continental army, and was in the immediate vicinity of several important military operations. Sally saw much of the officers and heard much of the fighting, and comments on both freely and quaintly. Gen. Smallwood is "tall, portly, well-made: a truly martial air, the behavior and manners of a gentleman"; Capt. Furnival, "the handsomest face I ever saw, a very fine person"; Capt. Finley is "wretched ugly"; Maj. Stoddert, "very reserved," but has "an engaging countenance and address," etc. Later the Major grows much less reserved. Another officer who throws off his reserve is Capt. Alexander Spottswood Dandridge, of Virginia, a relative of Martha Washington. Sally describes him in the Journal as "the handsomest man I ever beheld." He asks her if she is a Quaker, and on her saying "Yes," says, "Then you are a Tory," but this she vigorously denies. Gallantry, flirtation, sociability, war and humdrum country life jostle each other in the pages of this unpretentious journal, the whole making a picture of unequaled value for the historian—and of charm for the novel-reader as well.

It has been carefully edited from the original manuscript by ALBERT COOK MYERS, M. L., who has collected a great mass of material elucidating the text, and also many portraits, relics, documents, signatures and pictures relating to characters appearing in the Journal. It is beautifully printed on deckel-edge paper, profusely illustrated, and bound in antique style with a cover design by Walter Whitehead. *Circular on application.* **$2.00,** *postpaid.* **FERRIS & LEACH, Philadelphia**

Facing on Berkeley, Boylston, and Providence Streets; but one block from the far-famed Public Gardens and the same distance from Copley Square; is but two minutes' walk from the Art Museum and Trinity Church; is directly opposite the Institute of Technology, and but five minutes to all theatres, shops, and the business section.

Restaurant à la Carte. Dining-Room. Table d'hôte. Café and Billiard-Room for Gentlemen.

# PAGE'S LEADING FICTION

*SECOND EDITION*

## Barbara Ladd

*By CHARLES G. D. ROBERTS*

Author of "The Kindred of the Wild," "The Heart of the Ancient Wood," etc.

With illustrations in color by FRANK VERBECK.
1 vol., gilt top, decorated binding. $1.50.

". . . From the opening chapter . . . to the final page . . . Mr. Roberts lures us on by his rapt devotion to the changing aspects of Nature and by his keen and sympathetic analysis of human character.

"'Barbara Ladd,' in short, is a delightful piece of fiction, and Mr. Roberts is to be congratulated upon his success."
—*Boston Transcript.*

*FOURTH EDITION*

## The Last Word

*By ALICE MacGOWAN*

1 vol. Library 12mo, cloth, gilt top, *Illustrated.* $1.50.

"When one receives full measure to overflowing of delight in a tender, charming and wholly fascinating new piece of fiction, the enthusiasm is apt to come uppermost. Miss MacGowan has been known before, . . . but her best gift has here declared itself. . . .

"To the student of human nature, who is interested in . . . a pure, wholesome romance of heart and hand, 'The Last Word' will bring a generous share of pleasure."—*Louisville Post.*

*FOURTH EDITION*

## Hope Loring

*By LILIAN BELL*

Author of "Abroad with the Jimmies," "The Expatriates," etc. Illustrated by FRANK T. MERRILL. 1 vol., 12mo, cloth decorative. $1.50.

"Tall, slender and athletic, fragile looking, yet with nerves and sinews of steel under the velvet flesh; frank as a boy and tender and beautiful as a woman, free and independent, yet not bold—such is 'Hope Loring,' by long odds the subtlest study that has yet been made of the American girl.

"All in all, 'Hope Loring' is a notable addition to the novels that are distinctively American in sentiment, character and treatment."—DOROTHY DIX *in the New York Journal.*

## NEW LIPPINCOTT BOOKS OF DISTINCTION

### NEW YORK: OLD AND NEW

Its story as told by its landmarks. The writer is the author of "Rambles in Colonial Byways," and "Washington: The Capital City," etc., and this is the first authoritative, comprehensive and at the same time readable book yet put out on New York City itself. The volumes are handsomely illustrated with many reproductions from photographs, old prints, etc., and have decorative head pieces. The work contains a wealth of new material.

By RUFUS ROCKWELL WILSON

*Two Volumes, in box. Crown 8vo, Illustrated. Extra Buckram,* ***$3.50*** *net. Postage, 30 cts.*

### THE TRUE HISTORY OF THE AMERICAN REVOLUTION

These are the real facts of the days of 1776. Mr. Fisher has some things to tell about the conduct of the War of the Revolution, its chief figures, and the reasons for its outcome, which will startle every reader of American history. The great struggle is treated in the same candid fashion as are the characters and lives of the Americans who are included in the widely known "True Biographies."

By SYDNEY GEORGE FISHER

*24 illustrations and map. Crown 8vo. Cloth decorated,* ***$2.00*** *net. Postage 14 cts*

### STORIES OF AUTHORS' LOVES

Two fascinating volumes of the romances of the most widely-known American, English and European authors. There is nothing in fiction to compare with the interest of the romances of the real men and women whom we all know by their writings. The volumes have the value of being a chronicle of fact, but hold all the charm of a novel. Their author is the literary editor of the *Chicago Interior*. The books have photogravure frontispieces and forty-three duogravure portraits and views.

By CLARA E. LAUGHLIN

*Two volumes, illustrated. Handsomely bound, in box.* ***Net $3.00.*** *Three-quarters morocco.* ***Net $6.00.*** *Postage 22 cents.*

*AN IMPORTANT ART BOOK*

## Luca and Andrea Della Robbia AND THEIR SUCCESSORS

**By MAUD CRUTTWELL.** With over 150 reproductions in photogravure and half tone. 8vo, $8.00 *net* (Express 40 cents.)

This is the first adequate treatment of an artist whose work is stamped with the mark of vigorous and creative genius, by which he takes rank among the great artists of the world. Aside from its extreme value from an artistic and literary side, the book is a beautiful one, sumptuously printed and fully illustrated.

## THE POPULAR LIBRARY OF ART

Edited by **EDWARD GARNETT.** Each volume, 16mo, 200 pages, with 30 to 60 illustrations. Each, cloth, 75 cents *net;* leather, $1.00 *net* (Postage 6 cents).

"In each case a critical essay which contains real criticism. Interesting and stimulating."—*Nation.*
The volumes are tastefully bound and printed, and are illustrated from the most characteristic examples of the artist's work—altogether making beautiful examples of the bookmaker's art.

*The following four volumes are ready:*

### ROSSETTI.
**By FORD MADOX HUEFFER.**

"One of the best studies we have had of an erratic talent which has generally provoked undue laudation or excessive dispraise."—*N. Y. Evening Post.*

"Mr. Hueffer writes a thoroughly interesting and well-considered study."—*Observer.*

### REMBRANDT.
**By AUGUSTE BREAL.**

"Free from the absurdities of current æsthetic criticism. . . . Concise and refreshing."—*Critic.*

"Remarkably sincere and straightforward. He has realized his subject afresh."—*Athenæum.*

"The volume is one that every lover of art will prize."—*Baltimore Sun.*

### ALBRECHT DÜRER.
**By LENA ECKENSTEIN.**

"A charming series. The pictures serve admirably the best purpose of book illustration and help the reader the better to understand the letterpress. Instructive and attractive. They deserve to be widely popular."—*Scotsman.*

### FRED. WALKER.
**By CLEMENTINA BLACK.**

"Dainty in appearance, nicely printed, profusely and well illustrated, and thoroughly and intelligently written. We consider these critical essays on famous painters of real educational value."—*Birmingham Post.*

*TWO WORKS OF EXTREME IMPORTANCE*

## DANGEROUS TRADES.

THE HISTORICAL, SOCIAL AND LEGAL ASPECTS OF INDUSTRIAL OCCUPATIONS AS AFFECTING PUBLIC HEALTH.

*By a Number of Experts.*

**Edited by Dr. T. OLIVER, M.A., M.D., F.R.C.P.,**
Medical Expert on the White Lead, Dangerous Trades Pottery, and Lucifer Match Committees of the Home Office; Professor of Physiology, University of Durham.

With numerous Illustrations, 8vo, $8.00 net. (Postage 32 cts.)

"Covers the widest possible field and its information is definite and convincing. Each chapter, and there are seventy, disposes of its own subject in a conclusive manner."—*Daily Chronicle.*

"A work of monumental proportions and of the greatest value to all for whom the problems of industrial vital statistics have interest. This great work should be in every reference library and within reach of every philanthropist, employer, sanitary inspector and legislator."—*N. Y. Times Saturday Review.*

## A TREATISE UPON THE LAW OF COPYRIGHT:

IN THE UNITED KINGDOM AND THE DOMINIONS OF THE CROWN, AND IN THE UNITED STATES OF AMERICA.

Containing a Full Appendix of All Acts of Parliament; International Conventions, Orders in Council, Treasury Minutes, and Acts of Congress Now in Force. By **E. J. MacGILLIVRAY, LL.B., Cantab.,** of the Inner Temple, Barrister-at-Law. 8vo. $8.00 net. (Postage 23 cents.)

"Mr. MacGillivray has certainly produced an eminently useful work on a subject that is all-important to authors and publishers. . . . Moreover it is 'the author' in the largest sense, not only the author of books, to whom this work appeals . . . very complete and accurate . . . admirable text-book."—*Spectator.*

## A GRAND DUCHESS AND HER COURT

By **FRANCES GERARD,** author of "The Romance of Ludwig II. of Bavaria." In two volumes, 8vo, with 32 illustrations, $7.50 *net.* (Postage 32 cents.)

The career of Anna Amalia is so well worth recording that it is a matter of surprise no biography of her has hitherto appeared. Apart from her own interesting personality, the book will be found replete with anecdotes and new matter concerning the personages who made Weimar so celebrated in the eighteenth century—to wit, Goethe, Schiller, Herder, Wieland, Charlotte von Stein, Corona Schroeten, and many others.
"Such a memoir is history in the best sense and of the best sort. It is history with the personal equation first and foremost on every page. . . . The work belongs to the very first class of historical biography."—*Literary World.*

## A Foreign View of England in the Reigns of George I and George II.

The Letters of Monsieur De Saussure to His Family. Translated and edited by **MADAME VON MUYDEN.** 8vo, cloth, $3.00 *net.* (Postage 14 cents).

"Well worth translating and printing for the keenness of the author's observations and the vivacity of his style."—*N. Y. Sun.*

## Life and Letters of H. Taine

1828-1852. Translated by **MRS. R. L. DEVONSHIRE.** 12mo, cloth, $2.00 *net.* (Postage 10 cents).

"This is a strong, manly, and healthful book—the picture of a noble mind, reflective and full of philosophy, particularly instructive and suggestive in a rushing, struggling, sciolistic age like the present."—*Daily Telegraph.*
"Every reader of these letters will find something to give him pleasure,"—*Athenæum.*

## A Patrick's Day Hunt

By **E. Œ. Somerville** and **Martin Ross,** author of "Some Recollections of an Irish R. M.," etc. Illustrated in text and with 8 full-page color plates, oblong, $2.50.

A genuinely humorous piece by the well-known authors of "Recollections of an Irish R. M." The story is illustrated by some excellent color plates, and the book makes an ideal gift.

## E. P. DUTTON & COMPANY, 31 WEST 23D ST., NEW YORK.

# THE MACMILLAN COMPANY'S

# The Nation.

NEW YORK, THURSDAY, NOVEMBER 20, 1902.

## The Week.

Mr. James Creelman at last gives us Addicks's *apologia* in the *World*. Stripping off the accessories of Italian art and domestic felicity in which the narrative is embowered, the apology comes down to this: that Mr. Addicks had rehabilitated the Republican party in Delaware. Towards this disinterested work he had offered a slight contribution of $10,000 a year, and the total cost of his leadership in Delaware, he is "quite certain," has been, not millions, but a trifling $250,000. The fact of the matter was, said Mr. Addicks, that all the trouble had arisen because he (Addicks) had been a Theodore Roosevelt out of due time. As he said this blushingly, he presented to Mr. Creelman's untroubled gaze "a pale sapphire ring, an inheritance from an O'Sullivan ancestor in Ireland, who caused the family motto, 'Modestia Victrix,' to be engraved under the rampant lions, the wild boar, and the deer of the family crest." Mr. Creelman avoided the subject of "victorious modesty" with Jesuitical astuteness, while Mr. Addicks, as "a gentle breeze scattered the yellowed leaves of trees among the dying flowers and the drooping bushes," explained how he had "simply got around" a Massachusetts law regulating the capitalization of gas companies. In this connection he felt that attempts to control great corporations by the State were ill-advised. Trusts were best "let alone," and matters would soon "adjust themselves along natural laws." Finally, the forerunner of Theodore Roosevelt felt that in the matter of the Byrne appointment the actual Theodore Roosevelt has acted "gracefully and properly." Since Mr. Addicks had already explained that he was not "an ignorant, vicious vulgarian," his opinion on a matter of personal propriety should be given due weight with the President.

---

If Platt has rendered any public service entitling him to the honor of reelection to the United States Senate, the fact should be known. Will none of his friends come forward to tell us what it is? We and the vast majority of his fellow-citizens are lamentably ignorant of our indebtedness to him, if any exists. What has he done for the State? Wherein has the city benefited by him? As Senator, what act of his deserves praise or recognition? Platt's offences we know. The objections to him are mountain-high. But what can be said in his favor? We ask his admirers, his defenders, even his apologists, to tell us. Is it not an extraordinary condition of things when the State of New York is called upon to elect a Senator for whom not a word can be said; who is to be elected amid universal silence and hanging of heads; for whom even his private adulators will not speak up in public?

---

This municipality was flung by him into the arms of Tammany in 1897. When reform triumphed last year, the most that Platt did was to keep out of the way. If he aided in the election of the anti-Tammany ticket at all, it was only because Mr. Jerome wakened vast enthusiasm by his fearless linking of Platt and Croker as the two bosses who were the veritable enemies of the city. Since then he has done nothing to show that he was not justly placed in that category. State legislation has been of a highly important character during Platt's term as Senator. He has touched it only to make trouble. There have been sweeping changes in taxation; laws passed vitally affecting the civil service, the dependent classes, the forests, the canals. With which one of these measures has Platt's name been connected, except malignly? It is not that he has kept his hands off State affairs, He has professed to direct them. But what has he done? He has urged a bill to take away the police power from New York city—a bill so bad that a Republican Governor was forced to break with him on that issue. He has affronted and assailed the judiciary in a manner so flagrant that the voters rose up to give him a stinging rebuke. If Mr. Platt has done anything else for this State, we should like to be told what it is. As for his service at Washington, who can point to a speech made by Platt? Who to an important bill introduced by him? Being in Washington simply as an office-broker and patronage-hunter, he made no pretence of being anything else. A vacant chair, or a lay figure to vote when a button was pressed, would have been as good a Senator as he.

---

Without any wish to prejudge Mr. Mitchell's case, we cannot resist a certain pleasure at seeing him so neatly cornered by Mr. MacVeagh. For some months John Mitchell has been cornering both his friends and opponents. He actually snubbed the President for his offer of a commission, without leaving him any grounds for a retort, and later he calmly annexed the President to the strikers' side without possibility of protest. Not that Mitchell need wholly be ashamed of the chase he led Mr. Wayne MacVeagh on Monday. On the contrary, the angel of peace himself could not have been more inflexibly opposed to all acts of violence, by whomsoever committed, than was the man who testified that his union had profited by what he described as "intolerable" conditions of disorder. But his attitude was clearly that of resignation, not of indignation, and in an unguarded moment he admitted that the dynamite outrages were presumptively the work of the strikers. For this means of terrorism he was careless enough to assert the advantage that it had been bloodless; an admission which proved that such intimidation had been deliberately planned.

---

The time is ripe for society to take action to protect itself against all boycotts. This evil has reached such proportions that freedom of action, and even freedom of thought, have been annihilated in some localities, so that men go to their daily work trembling in fear of an unseen monster, the boycott. In some places two or more boycotts are raging at once. The boycotters boycott each other, and then threaten all men, women, and children who refuse to obey the orders which they discharge against each other. This was what Mr. Samuel Gompers referred to in his opening speech at New Orleans last Thursday, when he said that unless there was a speedy change in the ways of organized labor, the unions would be fighting each other behind barricades in the streets. Yet Mr. Gompers goes in for boycotts when he has the making of them himself. No man who believes in the boycott at all is fit to put a limit on the use of that anti-social, uncivilized, un-American weapon.

---

The Board of Supervisors of Warren County, N. Y., has asked the boards of the neighboring counties of Saratoga and Washington to join in an appeal to the Legislature for an appropriation to pay the bills caused by the riotous strike on the Hudson Valley Railway. It was this which made necessary the keeping on duty of the various companies composing the Second Regiment, N. G. N. Y., for a number of weeks. It is to be hoped that this appeal will fail. If the daily reports of the incidents of the strike were correct, the rioters received no little encouragement from the attitude of the people in the towns and villages connected by the railway's lines, particularly in Glens Falls, Sandy Hill, Fort Edward, Saratoga, Mechanicsville, and Waterford. Indeed, the number of employees on strike was relatively so small that it would have been impossible, without the assistance of a large number of unruly local sympathizers, to organize riots so serious as to make necessary a call for State troops. In this view of the case, the people of the neigh-

borhood affected by the disturbances were largely to blame for the outbreaks, and it would be a wholesome lesson for them to be compelled to pay the fiddler after their dance.

---

It is now plain that neither the Governor nor the State military authorities can take any action with a view to punishing the Schenectady labor leaders who are engaged in an attempt to injure the National Guard of this State. It is not treason to deprive a man of his employment because he has chosen to become a citizen soldier; it is probably not even a conspiracy against the State, as that term is at present defined. The injured militiaman might properly bring suit individually against the leaders who have arbitrarily deprived him of his employment because he chose to serve the State. As far as the State authorities are concerned, however, they are powerless to act in the matter, and their helplessness will undoubtedly lead to efforts to secure legislation on the subject as soon as the Legislature meets, particularly as this is not the first case of union hostility to the militia. Were the efforts of the labor unions directed towards discouraging enlistments in an over-large and menacing standing army, there might be some excuse for the attitude taken in Schenectady and elsewhere. But there is nothing whatsoever about the character or organization of the National Guard which can be construed as menacing the liberties of the people, or as threatening the right of laboring men to work or to strike whenever they see fit. When troops have been called out on strike duty, there has never been an instance, to our knowledge, where the soldiers have taken sides with one or the other party to the dispute. They have in every case confined themselves to the duty of policing the districts into which they were sent, and of protecting private property from the attacks of the lawless. In remarkably few cases have the troops fired upon the crowd in their efforts to uphold the law. Strikes often collapse on their mere appearance; but no large strike of moderately skilled labor, such as motormen, freight-handlers, switchmen, etc., is likely to succeed unless public opinion is emphatically behind the strikers.

---

Mr. Griggs's statement, in last week's preliminary hearing of the suit of the United States against the Northern Securities Company, opened what is perhaps the most important line of defence. He alleged that during several years, before even the anti-Trust act of 1890, many important American railway companies "had acquired all or a majority of the shares of the stock of competing railway companies, or had acquired by purchase or lease the control of parallel and competing lines of railway, and that this state of things was a matter of common knowledge, and was reported to the Interstate Commerce Commission, and by it to Congress." Mr. Griggs further maintained that Congress never intended, by the act of 1890, to touch this class of operations. Whatever may be said as to this latter inference, Mr. Griggs's statement of facts is correct, and was, of course, amply sustained by the copies of annual railway reports submitted in evidence. This phase of the matter has, in fact, been from the first the most significant. Even people who were more or less in sympathy with the Government's purposes in the Northern Securities suit, have asked, with some concern, how a decision against the company would affect such well-known railway aggregations as the New Haven or Pennsylvania Companies. It is natural that the defence should push to the front this argument in its case.

---

The argument was anticipated, however, by Attorney-General Knox in his brief of March 10. The Government's position, as then outlined by Mr. Knox, forestalled with a good deal of skill contentions that the pending suit was really a suit against all existing railway systems, formed through purchase and consolidation of outlying properties. The Attorney-General maintained:

> "The defendant, the Northern Securities Company, was not organized in good faith to purchase and pay for the stocks of the Great Northern and the Northern Pacific Railway Companies. It was organized solely to incorporate the pooling of the stocks of said companies, and to carry into effect the unlawful combination or conspiracy aforesaid. The Northern Securities Company is a mere depository, custodian, holder, and trustee of the stocks of the Great Northern and the Northern Pacific Railway Companies, and its shares of stock are but beneficial certificates issued against said railroad stocks to designate the interest of the holders in the pool. The Northern Securities Company does not have, and never had, any capital sufficient to warrant such a stupendous operation."

The ingenuity of this plea has been much commented on by lawyers. It was met, in the defendant's answer of last May, mainly by allegation that "this defendant is not a railway company, and has no power to operate or manage railways or make or control rates of transportation," and, moreover,

> "that every share of stock issued by this defendant has been issued to the persons or corporations receiving the same, for full value paid for it, either in cash or its equivalent."

The interesting part of the legal battle in this case will be the effort of the defence to assimilate the Northern Securities combination to the smaller railway purchases and consolidations which preceded it, and of the prosecution to distinguish it from them.

---

Gen. Chaffee has manfully assumed the unpleasant responsibility for everything done in the Philippines during his tour of duty as commander-in-chief. It must be noted, however, that he limits this responsibility and his approval to the written orders issued by his subordinates. "Hell-Roaring Jake's" instructions to kill and burn in Samar were, it will be remembered, verbal orders. Gen. Bell's severe course in Batangas Gen. Chaffee heartily approves, because it was "for peace and not for war" that he was contending. Gen. Chaffee also furnishes us with a new description of reconcentration, "separation with their effects from those not disposed to peace," which should be added to the long list of palliative terms invented by conquerors the world over to minimize their cruelties. But Gen. Chaffee is in danger of being considered over-optimistic when he thinks that the end of the insurrection is surely accomplished. It is easy enough to call small bands "ladrones" and outlaws, but when the Civil Commission finds these robbers increasing in such numbers as to compel it to call on the military for aid, as it did last week, the disguise grows thin. Like Gen. Young, Gen. Chaffee has great praise for the soldiers; but he qualifies his belief in their exerting a good influence on the natives with the phrase, "unless the alleged demoralizing influence broadens so as to make the presence of the white race as a race demoralizing to the native races." Plenty of proof of this is to be found both in and out of army circles in our four years' occupation of the unhappy Philippines.

---

A telegram from Washington says that the report of the Philippine Commission recommends the establishment of the gold standard in the islands at the earliest possible moment. The decline in the price of silver has caused a loss to the Government of about $1,000,000 during the past six months; that is, since the adjournment of Congress. The public revenue is collected in silver, while purchases are made for the most part on the gold basis. Payments of salaries, if made with silver, cause loss to the recipients, who are mostly Americans. President Taft himself is a sufferer in this way. The condition is like that which compelled Japan, in 1895, to adopt the gold standard. At that time the gold dollar was worth, as bullion, exactly two silver dollars. Now it is worth two and a half, and yet the State of Colorado went Republican in the last election. The latter fact should embolden the United States Senate to adopt the Conant bill for currency reform in the Philippines before the price of silver falls materially lower. According to all reports received from the islands, their financial condition is desperate. The Government is obliged to borrow large sums of money to meet its necessary expenses and to avert starvation among the inhabitants. In short, the after effects of the

war have come in the usual form of pestilence and famine. A change in the currency system will not cure these afflictions, but it will improve the country's credit, and enable the Government better to cope with the evils confronting it.

Careful readers have formed the habit of suspending judgment on all matters relating to the Danish West Indies until the statements of evidently biassed cablegrams have been either verified or, as has usually been the case, contradicted by the Danish papers. Many of our enthusiastic editorial writers, however, have not learned wisdom from past errors, and the result is a fresh outburst over the report that the opponents of the sale have been unable to make good their promise to support a steamship line between Denmark and St. Thomas. But it is now stated on no less authority than the *Berlingske Tidende* of Copenhagen, the Government organ, that the full capital of the new company has been guaranteed, and that all that is lacking is the subscription of additional shares for the extension of communications with Central and South America. The article contains a list of the directors of the company, which includes some of the strongest names in the Danish commercial and aristocratic world. Danish capitalists are not in the habit of backing out of an engagement once made, and it was a slur on the national character to suppose that they had done so in this case. Hardly less unfair is the statement, often made since the rejection of the treaty by the Danish upper house, that this action was taken solely in order to embarrass the present Liberal Ministry. It may be that political motives played a part with many, but in the main the hostility to the sale was along national, not party, lines. Georg Brandes, the leader of the Danish radicals in literature, was among the first to give voice to the national conscience, and it is childish to suppose that he would act in the interests of Danish conservatism.

---

It is not so long ago since Congressman Grosvenor solemnly warned the nation, under penalty of dire financial distress, not to elect a Democratic Congress. Now the prophecy has been completely fulfilled, except in the matter of the Democratic Congress. Depreciation in securities and the prospect of falling prices for commodities have come as promptly to time as if the nation were chilled and prosperity checked by the prospect of Democratic ascendency. The awkwardness of continued semi-panic conditions following upon a rousing vote for the Republican party and prosperity is sufficiently obvious. It is not too much, however, for the Republican oracles. What would have been very like an expression of Divine wrath for a vote against the "god of things as they are," becomes now a beneficent chastening for the common good. That is, a Democratic bear market is a high political offence, but a Republican bear market is a casual incident of speculation, for which the party assumes no responsibility. The speculator who burns his fingers under Democratic depression has the sweet savor of a martyr; the speculator who liquidates a losing account during Republican depression is a foolish fellow who suffers the natural penalty of his own recklessness. All of these things go to show that it makes all the difference in the world whose panic it is. But such reflections yield imperfect consolation to those who believed Congressman Grosvenor and voted the Republican ticket to hold the market up.

---

The fact that October's import of foreign merchandise, as shown by Saturday's official figures, was the largest ever reported for that month, is not in itself especially surprising. The country is wealthier than it ever was before, and better able to buy what it chooses from foreign producers and manufacturers. Comparison of the year to date with previous years, however, makes the showing a little startling. In the ten completed months of 1902, this country has imported $61,700,000 more foreign merchandise than in 1901, $94,600,000 more than in 1900, $131,500,000 more than in 1899, and $261,900,000 more than in 1898. As compared with the last-named year, the rate of increase in our imports has been very nearly 50 per cent. Whatever the immediate cause or meaning of the movement, it disposes of several theories entertained during this trade revival by philosophers who had established to their own satisfaction a wholly new order of things in American finance. Judged in the light of these more recent developments, we do not seem to have learned how to dispense with foreign purchases, while we do appear to have discovered how to dispose of a "foreign credit balance."

---

"Everything ends in songs," said that apparently frivolous but really wise Frenchman, Beaumarchais. If he were living in New York to-day he would have probably said, "Everything ends in dinners." It was in recognition of this principle that Senator Depew and Mr. James H. Hyde assembled the notable company that on Saturday bade farewell and godspeed to Ambassador Cambon. It will not be invidious to say that so representative a gathering could hardly have been made in honor of any other member of the diplomatic corps at Washington. M. Cambon had exceptional responsibilities, of which he acquitted himself with rare skill. During the late war he represented with rare dignity the interests of Spain. No doubt, the perfectly correct attitude of the French Government at that time was in large part due to his representations. There was every reason, then, for making such public and hearty recognition of his eminent services to this country as can most fully be offered in the post-prandial hour. That hour has its perils, as was amusingly shown in the case of Secretary Root, who spoke for the Administration. Something of the "Visigothic" warmth of Mr. Root's political prophecies has been eliminated from the press reports, but enough remains to show that he charged M. Cambon to create "a great Latin republican empire on the continent of Europe, in which the Seine and the Guadalquivir will flow in unison and harmony." In other words, he authorized M. Cambon to overthrow the sovereign to whom he is accredited—diplomatic credentials of an unusual order. At this point M. Cambon's English, which had previously served him admirably, failed him utterly, and he gave no signs of understanding Secretary Root's rearrangement of the map of Europe. In the privacy of his first interview with Premier Combes, he will possibly find occasion to say that the duty of "telling it to the marines," which in France falls to the Naval Minister (the original inventor of the "champagne speech"), is in America performed by the Minister of War.

---

The German Reichstag has by a large majority given the Government authority to proclaim retaliatory tariff schedules against all nations which discriminate against German products. By a curious coincidence, this vote was taken only a day or so after President Roosevelt's declaration before the Chamber of Commerce that "the voice of the just man armed is potent." Naturally every nation must be considered just by its own legislature, and the Reichstag made a prompt and justifiable application of the President's dictum in taking up arms. Probably the German Foreign Office will assure our State Department that the new tariff weapon is not for use, but merely for potency. It is hard to see how we could object to such an explanation. For years it has been our boast that we held up cheap foreign products and inferior European labor. That "just man armed," Brother Jonathan, who has been used to mulcting Wagoner Hans at the pistol point, will have no real grievance if some day Hans draws not his purse, but his snickersnee. It was, in fact, precisely President Roosevelt's argument that "arms" were necessary which the Agrarians used in the protracted debate of Thursday. How fallacious is that reasoning which sees in fumbling with deadly weapons a means of keeping political and industrial peace, no one who has observed societies in which every gentleman "wears a gun" will need to be told.

### *ROOSEVELT & ADDICKS.*

Who would have believed it, if told a week ago that Addicks would be seen today trampling upon the prostrate form of Delaware, and boasting that he had the support of Theodore Roosevelt in his efforts to complete that State's dishonor? Yet that is precisely the kind of swaggering which the gas-man is doing. All his subsidized country newspapers have had the tip from him, and are gleefully saying that Addicks is now the sole dispenser of Federal patronage in Delaware. He still needs a few votes in the Senate, but, with the prestige of President Roosevelt's endorsement, he hopes now to win them. It is a shameful and humiliating spectacle.

Mr. Roosevelt has appointed an Addicks man United States District Attorney. To do so, he had to pass over the name of the temporary incumbent of the office, Mr. J. P. Nields, who was endorsed for the position by nearly every lawyer in the State, irrespective of party, by both of the Federal judges, and by the entire judiciary of Delaware. The Addicks tool named by the President, Mr. W. M. Byrne, is a man whose appointment is conspicuously unfit, quite apart from his political affiliations. During his first term in the office—which he resigned at the word of command from Addicks—he was notorious for inefficiency. He had to undergo the humiliation of being rebuked in open court by Judge Bradford, for having neglected his duty. It would be a shame to appoint such a man even if his political sponsor were a saint. To take him at the behest of Addicks is an unspeakable degradation. His confirmation ought to be fought and defeated. We sincerely hope that the Judiciary Committee of the Senate, with Senator Hoar at its head, will show a more scrupulous regard for the honor and purity of Federal justice than the President of the United States has displayed in this case.

But even if Byrne were a Story and Webster rolled into one, his appointment ought not to be thought of so long as it could be of the slightest aid to Addicks in the commission of his political high crimes and misdemeanors. The Postmaster-General explains the President's position, just as we know from other sources that Mr. Roosevelt himself puts it. "Why," he says, "the election returns show that Addicks has 12,000 votes behind him, while his Republican opponents have but 8,000. How, then, can I deny him recognition?" When, however, did the moral law begin to depend upon a sum in arithmetic? Can we not speak our mind about the outrages of a notorious political criminal until we have worked out a problem in proportion? We understand, of course, that the President attempts to throw the whole thing back upon the electorate of Delaware. He cannot, he maintains, interfere in a factional quarrel within the party. He is forced to make a rule that he will deal with any leader whom the majority of the party voters send to him, and therefore he will recognize Addicks just as he has recognized Platt and Quay.

Now, saying nothing, for the moment, of the expediency or morality of a "rule" which compels an honest President to embrace brigands when they come to him with a party label on their backs, we have to point out that even the President's rule does not excuse him for striking hands with Addicks. That colossal corruptor of the suffrage is not yet Senator. He is not, like Quay, a successful pirate, in charge of the captured ship; he is still fighting, and the beleaguered crew is still hoping to beat him off. But Mr. Roosevelt, observing that the piratical assailants outnumber the crew in danger of massacre by 12 to 8, decides to aid the buccaneer! A party President may be compelled by some strange rule to aid a man who has actually broken his way into the Senate, like Platt, but how can he be bound to go to the assistance of a man who has not yet completed his burglary? What Addicks says to Mr. Roosevelt is, in effect: "See, I have sandbagged the policeman on the beat, I have gagged the night-watchman, I have got my jimmy, my drills, and my dynamite all ready, and if you will only help me up to that window I can break in and make a good haul." And Theodore Roosevelt offers his broad back to help the burglar up!

We are informed that the President is impatient that "something be done" in Delaware. He tells the anti-Addicks Republicans that their policy is one of pure "negation." They deadlock the Legislature and prevent Addicks from being elected, but they are able to elect no one themselves. He thinks that an intolerable kind of inefficiency. The same might be said, however, of a woman struggling to prevent her honor from being violated. That, too, is a policy of "negation." All she can do is to fight to the limit of her physical strength; and the fact that she is weak is not usually adduced by a bystander as a reason for going to the aid of the ravisher who is strong.

The loathing which the honest people, not only of Delaware, but of the whole country, have come to have for Addicks, in both his private and his public character, cannot be unknown to President Roosevelt. The facts are beyond dispute. A political highwayman is trying to rob a sovereign State, and now boasts that he is getting aid and comfort from the Chief Executive. The situation is one that calls for strong words—and we do not know where to find stronger ones than in the writings of Theodore Roosevelt. He is the author, out of office, of the following sentiments, and he cannot blame us if we hold him to them in office:

> "There must be no compromise with official corruption."
> "We cannot trust those base beings who treat politics only as a game out of which to wring a soiled livelihood."
> "The real and dangerous foe is the corrupt politician."
> "No man who is corrupt, *no man who condones corruption in others*, can possibly do his duty by the community."

Is Mr. Roosevelt going to eat all these and the other burning words of his in which he has expressed his hatred of the men of whom Addicks is the perfect type?

It would be interesting to know how the President squares his action in the case of Internal Revenue Collector Bingham of Alabama with his announced rule as applied to the situation in Delaware. He removed Collector Bingham for the very good reason that this Federal office-holder was engaging in a corrupt and vicious scheme of party politics—namely, the denial of the just political rights of negroes qualified to vote under the laws of the State. Did the President pause to inquire whether the Collector and his associates represented the dominant faction among the Alabama Republicans? What is good for Delaware surely ought to be good for Alabama; and yet there is nothing to show that Mr. Roosevelt got out his tape measure or his scales before he chopped off the official head of the offending Bingham. The offence of the now reappointed Byrne in Delaware was fully as flagrant as Bingham's. Under orders from Addicks, Byrne resigned his office to run for Congress; the sole and avowed object being to defeat Representative Ball, an anti-Addicks Republican. This was surely a blow to the party (for it sent a Democrat to Congress) as well as an offence against political morality. Yet Byrne is rewarded, while Bingham was punished. Does the President have to take observations of latitude and longitude as well as consider weights and measures, in applying his rule? As a political moralist he had himself laid down the real rule for treating the demand of Addicks for recognition. What the public man must do, said Mr. Roosevelt, who would "avoid wreckage," is never to assume "the attitude of deifying mere efficiency, mere success, *without regard to the moral qualities* lying behind it." If he had applied that to Addicks, the gas-man would now be gnashing his teeth instead of chuckling over Presidential support.

### *ENEMIES OF SOCIETY.*

That labor leaders should grow drunk with power, like other men, is not surprising. The surprising thing would be if the intoxicating draughts which have recently been held to their lips had no effect in heightening their arrogance and making their demands more extravagant. They have been recognized

and flattered by our Chief of State. They have been treated almost as if they were a coördinate branch of the national Government. No wonder, then, that they have set up as, at least, an *imperium in imperio*, with separate laws of their own, often conflicting with the law of the land; with an allegiance to the labor union ranking above that to the State; and with an accelerating recklessness and folly displayed in turning the hand of "labor" against the hand of every independent citizen and against the best interests of society as a whole.

We are not astonished at the way in which organized labor has been showing its teeth of late, but we are instructed by it, and so ought all Americans to be. If any man had doubts about the inherent tendency of unchecked unionism to run into tyranny and a new slavery, as respects its victims, and into a sharp challenge of the fundamental principles of our government, the events of the past few days should have disabused him. We have seen President Eliot denounced as a Judas Iscariot and Benedict Arnold combined for daring to say that he detected a heroic strain in the workingman who refused to submit to union despotism. This honored bearer of a distinguished American name, this leader of those who lead in the intellectual world, has been covered with foul abuse by labor oracles who know as little of our country's traditions as they apparently do of its language. And now close upon the heels of these verbal ferocities comes the most extreme and high-handed and cruel-minded boycott ever attempted in the United States. Scarcely had President Mitchell denied that the boycott had a place in the programme of organized labor, when he and the other apologists for unionism had the lie given them by the Schenectady boycott.

This is laid out on paper with the thoroughness of a military campaign, and with the minute specifications of a mediæval interdict by the Pope. Every street car in and about the city is to be picketed, and if a union man is caught riding upon the unclean thing (unclean because operated by non-union motormen and conductors), he is instantly to be deprived of his union card—that passport of citizenship—and to be expelled as a traitor. Any business man who patronizes the cars is to be boycotted. Inasmuch as the Schenectady Railway Company has some connection with electric-light and gas companies, householders are to be forbidden, under penalty of the union's displeasure—that is, its boycott—to light their residences except with candles or kerosene. That is to say, a would-be labor monopoly is willing, in the use of unlawful weapons, to play into the hands of that other monopoly which it has spent its breath in denouncing—the Standard Oil Company!

But it is not necessary to give further details of this boycott *in excelsis*. That it can succeed, we do not for a moment believe. Common sense has not yet fled from this country. The spirit of personal liberty is not dead. And until both reason and a self-respecting independence cease to exist among us, no such absurd and intolerable system as the labor boycott can live here. The Schenectady proposals are too insensate to be admitted even in a labor-ridden community. They must be rejected unless the city wishes to turn over its government absolutely to walking-delegates. But the incident is valuable as displaying the unscrupulous tendency which all the while lurks in a unionism ambitious of boundless domination. As some diseases are best studied in their most virulent forms, so can we easiest see the inherent nature of trades-unionism exhibited in its moments of extravagant terrorism. We perceive then its inner drift; how it would make every workingman whom it cannot coerce a pariah, and every citizen whom it cannot frighten a ruined man. The Schenectady boycott aims simply at compelling certain men to unionize themselves. In order to force that result, the existing labor unions are ready to wreck the city's business and make the life of its inhabitants one long misery and terror. It is when unionism thus brings forth its perfect work that we see how its leaders and dupes really make themselves enemies of society.

We are evidently approaching another of our periodic crises, in this business of labor organization and the boycott. John Stuart Mill said that he had learned to have great trust in "the capability of the American people to see the practical leanings" of a public question, and to do it "truly and rapidly when the critical moment comes." Surely the critical moment has come when the boycott rears its head and shows its fangs. It is time for all lovers of our inherited liberty to bestir themselves; to defy the insolent commands of a power not known in either law or morals; to call for a revival of American patriotism which shall display itself in resisting these upstart tyrants, and which shall insist upon riding, and working, and buying, and selling without let or hindrance from District Leader This or Local President That. The excess of arrogance in these ridiculous magnates of the lodge must be met fully and firmly; it must be laughed at as scorned; put down with a hard hand in its lawless manifestation; so that American society shall not appear the weak and craven thing the labor leaders imagine it, but capable of crushing these internal enemies.

## *ASPECTS OF LOCAL OPTION.*

The joint temperance committee of the Vermont House and Senate have recommended a high-license bill, giving it the preference over a bill embodying the chief features of the Gothenburg plan of State dispensaries. The highly significant feature of the debate in committee was that every member took it for granted that prohibition is a failure in Vermont, and assumed that the problem before the present Legislature was the proper regulation of the sale of liquor. This action, if followed up by the passing of a local-option law, will deal a shrewd blow to the surviving advocates of statutory prohibition. The reasons for the sudden change of opinion in Vermont are not far to seek. There were found in the last election two candidates courageous enough to strike at the traditional system. When once a voice was found to declare that the State was ever sinking into deeper hypocrisy, the response of the people was unequivocal. Everybody knew that practically all the drug stores in the country towns were unrestricted dispensaries of villainous liquor, that the morphia and other drug habits were alarmingly on the increase, that barrooms which paid no tax except an occasional fine were everywhere to be found; finally, that, in the absence of less destructive drinks, many farmers were making themselves sodden with hard cider, and quarrymen poisoning themselves with mixtures of crude alcohol and sirops. It was notorious, in fine, that, as a temperance measure, the prohibition law was a failure and a distinctly demoralizing force in the body politic.

Having tried and found wanting the theory that a State can by law prevent its citizens from drinking alcoholic liquors, Vermont will probably fall back upon the rival doctrine that each community may regulate the sale of liquor according to its own desires and needs. The peculiar form of local-option law that will be submitted to popular vote is not yet settled, but it seems likely that the law will provide for a "yes or no" vote on the question of license at stated and rather long intervals. Theoretically, such a system makes for stability and the permanent division of communities as license or no license. Practically, the experience of the yearly referendum in Massachusetts and Connecticut has shown the advantage of keeping the liquor question always open. The subject of God, said an irreverent editor of the *Revue des Deux Mondes*, has no timeliness in Paris. The effect of the sale of liquor upon the general morals and prosperity is never without interest in a Massachusetts village.

The Massachusetts law is of the utmost simplicity. It sets a high minimum, $1,000, and no maximum for all licenses. It limits the number of licenses to 1 to 1,000 of population (in Boston 1 to 500). It requires the question of license to be voted upon annually, but gives the local authorities (aldermen or selectmen) discretionary power to grant or withhold licenses from all

applicants. Furthermore, it regulates strictly the hours and conditions of sale, prohibits sale to minors, habitual drunkards, and paupers, and generally holds the saloonkeeper to the strictest accountability. The advantages of this system, as set forth by Mr. Frank Foxcroft in the October *Atlantic*, are patent. The annual referendum forces every community to have a mind of its own upon this important matter. "The recurring anti-license campaigns, unselfish, democratic, and educational, are of great value to the communities concerned, even aside from the main question at issue." The feature of the law which makes a "yes" vote merely permissive is also valuable, since it permits the local authorities to distinguish between a "snap" vote or a transient revulsion of feeling and a popular mandate. Two years ago licenses were refused in five towns which had voted "wet," and in other cases the fee has been set impossibly high.

Of course, the essence of the law is that, while leaving no community free to cast off the restrictions which universal experience has proved to be reasonable, it gives every community liberty to deal with its own needs according to its own preference. Twenty years' experience of the law has shown that the towns and cities tend to fall into permanent classes along license lines, and that the annual referendum is not a source of instability. Last year, for example, out of 353 towns and cities, only 37 changed their position, and these divided so evenly into license and no-license communities that the relative figures for the State were changed only by one.

Local option hardly needs elaborate defence to-day (though our own State still refuses the privilege to cities), but the immediate effect of the change to no-license in Massachusetts towns is extremely interesting. Arrests for drunkenness diminished by three-quarters in a number of towns which voted "dry," and the charges per capita for poor relief by one-half to two-thirds. In general, the strength of the Massachusetts plan is that, unlike prohibitive laws, it does not confuse the wholly different issues of saloon regulation and personal abstinence, and does not impose upon communities laws which public opinion will not suffer to be enforced; while, unlike restricted local option, it trusts every community to handle its own saloon problem. "The total result is," says Mr. Foxcroft, with whom all who know the facts will agree, "an average of effective and impartial law enforcement far above anything that could be looked for under statutory or Constitutional prohibition."

Zealots for compulsory abstinence will perhaps join the merely cynical in saying that the no-license towns maintain their virtuous stand only by reason of the proximity of isles of refuge for the thirsty and determined. In other words, local prohibition in Massachusetts depends upon the prevalence of the "Cambridge idea," which consists in "no-license for Cambridge and rapid transit to Boston." But the "Cambridge idea" is probably the best solution of the liquor problem that we can hope for under the present conditions of society. And a plan which constantly appeals to the intelligence and moral sense of the voter, and which makes impossible such a perversion of legislation as the Raines law, is worthy of consideration both by States which are framing a local-option law *de novo*, and those which are mending their present excise statutes.

## *THE FINANCIAL SITUATION.*

Comptroller Ridgely's speech to the Bankers' Convention at New Orleans last week follows much on the lines of Mr. Vanderlip's speech at Wilmington. Its dominant note is cautious warning. The Comptroller finds his arguments, as did Mr. Vanderlip, in the returns of the national banks themselves, and on this point he naturally speaks with authority. Mr. Ridgely wisely reverts, first, to the great industrial prosperity of the country, and to the fact that the recent strain on the money market has resulted largely from an unparalleled legitimate trade expansion. He notices, also, the great strength shown by the national banks in the recent money-market vicissitudes. But his conclusion is thus expressed:

> "In spite of all this, we cannot disguise the fact that, with reserves running down not only in the reserve cities, but in all the banks of the country, the situation is serious and requires close attention and careful handling. Now is the time for caution and care in bank management."

There will be no real disagreement with the Comptroller's views, as matters are now developing in the market. Our own regret is that Mr. Ridgely and his associates in the Treasury should not have uttered their warning months ago. We have had occasion to point out in these columns many times, during the early half of 1902, this movement of bank reserves and liabilities. The fall in reserve percentage was, in fact, quite as evident in the national-bank returns of July 16 and April 30 as in the recent September showing, which so startled Secretary Shaw. The only difference lay in the fact that September's reports showed that numerous national banks had allowed their reserve percentage to decline below the legally prescribed limitation, whereas the July and April statements proved that such conditions, though not yet attained, were inevitably approaching. Thus we attribute no great value to-day to warnings to the banks to be careful in their dealings. The warning of the markets has already been spoken in a considerably louder tone; and, indeed, the concerted action of the New York banks, a month ago, in the line of restricting loans to Stock Exchange borrowers, was sufficient evidence that the warning had been heard.

With the markets in their present confusion and disorder, and with a feeling of apprehension very generally abroad, we think that the financial community is most anxious now to learn how to get out of the scrape in which its recent excesses have involved it. Mr. Ridgely suggests improvements in the line of an asset currency and of a proper system for handling the public surplus. These proposals are well enough, but they scarcely meet the existing situation. They do not, in our judgment, even explain the situation. We cannot agree with the more or less general view that defective currency laws are to blame for the present troubles. If, indeed, it were true that demand for normal and legitimate business interests had expanded out of proportion to the available bank resources, there would be some force in the argument. But it is not normal requirements of trade which have increased loans of the national banks at the rate of nearly 20 per cent. within two years; nor is it normal trade demand which has filled Europe with American bankers' obligations, constantly subject to a call for immediate payment, and has thereby blocked the usual international movement of exchange. It has not, this year, been even absorption of money by the Treasury which has contracted the money market; the Government has less cash in its vaults than it held a year ago.

The simple truth of the matter, recognized by every observer with his eyes open and his wits at work, is that our eager promoters and speculators pushed their undertakings beyond the limit where available capital was sufficient to bear the burden. When such a situation is faced by any community, the inevitable outcome is liquidation. Some one else must be found to bear the burden, and his terms must be accepted. This is the process now at work upon the markets, and it is the only corrective of the situation. The course of events, regarded from the unbiassed view of the economic critic, has been as logical as any in the history of finance. First, our promoters sold their shares *ad libitum* to the public as partners in the enterprises, Next, when this was a trifle overdone, they offered bonds of the companies to the public. Overdoing this in turn, they resorted directly to syndicates, and thus indirectly to the American banks, to provide the capital and hold the securities until the public's mood should change. The last stage witnessed was the expansion of the promoters' demands beyond even the available resources of the domestic banks, and the resort to European lenders, on an unprecedented scale, to discount our promoting bankers' notes.

When the foreign capital began, as it did two months ago, to be recalled, the result was not in doubt.

We think that the drastic process of price readjustment and liquidation which has for some weeks been in progress on the New York Stock Exchange, is the application of the proper remedy. It has been perfectly clear that, at the level of "fancy prices" fixed and stubbornly maintained by Wall Street, the real investor would not buy. This being so, and conditions in the markets being what they were, it was incumbent on them to find a level at which such relief could be invited. There was no other way than by the violent decline in prices such as the markets have been witnessing. That the position of affairs, in this regard, is vastly improved over that of two months ago, no intelligent man will doubt.

Whether the readjustment process is or is not reasonably near completion, is a question not easy to answer. The end of stock-market liquidation is apt to come suddenly, showing that the work had been finished before the country as a whole was aware that it was under way. Commercial markets move more slowly; yet they are prone to move in a similar way when the problem is command of foreign capital. The nation, like the individual that has borrowed more than he can pay off conveniently at the moment, will, if it is wise, offer its actual merchandise on terms that the creditor will deem attractive. We do not pretend in this regard to make predictions. But in so far as the present abnormal movement of international exchange against this country is a consequence of our eighty or ninety millions annual increase in importations, it may be corrected by lower prices on domestic markets. In so far as it results from restriction of our exports, a similar remedy is at all events at hand.

## *LATTER-DAY SUPERSTITIONS.*

We are accustomed to say that we live in an age of science and of exact thinking. The future historian of the transition between the nineteenth and twentieth centuries will probably take no such flattering view. He will remember Omdurman, white with the robes of the thousands of dervishes who fell about the Khalifa; the Boxer hordes that hurled themselves upon European squares, secure in the belief that each adept was invincible against the foreigner. If our Mr. Lecky of the future pursues his studies more minutely, he will learn that in November, 1902, some hundreds of Russian fanatics, men, women, and children, turned their cattle loose, and marched, half-starving and half-clothed, through the bleak plains of Manitoba "seeking Jesus," until the local police put an end to their fantastic pilgrimage. In the United States, he will discover that people stricken with dangerous diseases were allowed to die for want of medical attendance. The occurrence, he will discover, was not infrequent; but none the less the sect which by an equal perversion of common sense and the English language held disease and death to be "a claim," boasted hundreds of thousands of adherents, who believed that the founder—a woman almost illiterate and of small intellectual parts—was immortal. Should the future historian remain unconvinced that this was an age of superstition, such facts as the grotesque settlement at Point Loma, Cal. (which is typical of many of the sort), with its pseudo-Buddhistic jargon, its "Aryan temple" approached by an "Egyptian gate" and overlooked by a "hill of the sun," will carry him back to the Middle Ages and the wildest reports of Knight Templarism.

It is a question if our superstitions have as respectable a ground as had those of our ancestors. They believed absolutely in the existence of an unseen world which touched them at every point. No peasant's hovel was too small for the fiend, or the Blessed Virgin, to enter. A keyhole sufficed for a witch or an incubus. Mystery surrounded them and oppressed them. They had to learn to live with it. When we find that they lived serenely and rationally, we commend them for their religion; when the horror or the desire of the unseen things drove them to irrational or bloody deeds, we say they were sunk in superstition. And in an age when practically nothing was explained and the simplest physical phenomena were attributed to supernatural causes, it was inevitable that the merely unusual should seem the portentous, and that there should be in every life hundreds of occasions to release the springs of a fear or an ecstasy.

One would naturally suppose that the progress of science had largely removed the very grounds of superstition. Today every sight, sound, or odor that may frighten us in the dark can in the morning be elaborately explained and analyzed. Mystery has ceased to surround us, and exists only in our own fancy. And the very phantoms of our own minds are fully recorded and classified, if not completely explained. Even in problems of the human emotions, psychology leaves only a narrow margin of the mysterious. What is it, then, that urges us to create mystery where we know it is not, and, having rejected the beautiful, traditional forms of belief in the supernatural, to have recourse to the puerilities of Christian Science or the claptrap of Theosophy? In this matter we are dealing with the superstitions of the educated—a somewhat different thing from the superstitions of the throng. It may fairly be said of the Mad Mullah's followers, of the Mormons and Doukhobors, that they represent an unbroken line of superstition. For science has, after all, entered very little into the thinking of the average man. We are informed by a competent observer that the immigrants in our New York slums actually create a kind of new folk-lore, based upon their changed conditions, and tolerant of the automobile and the trolley-car. But the Point Loma mystics represent a class of people who, having once divested themselves of superstition, have become again, in Herbert Spencer's expressive word, "rebarbarized." Their case requires a special explanation.

Very commonly no further cause than simple flightiness need be sought. Many people exchange agnosticism for Christian Science or Theosophy, for the same reason that they drop pewter and go in for blue china. But there is frequently a finer motive behind rather absurd superstitions. The human mind revolts at what might be called the arithmetical methods of science, is quickly wearied by tables of chemical valency and measurements of heat and sound waves. Granted that this is an infirmity, it is a constant and ineradicable one. As rule and measure go farther in the physical world, the mental world has its revenge in seeking after all manner of mysticism and romanticism. How otherwise explain the numerous cases where psychologists have dropped their study of the normal human mind, and risked health and even reason in the study of occult phenomena? It can only be that the exacter method and the perfectly defined material have seemed less interesting than the tentative method and the dubious material. This temper of mind even finds its apologists, and we are taught to have a kind of horror of the intellect that wishes to be sufficient to itself and refuses to affirm that which it has not proved. "Life is garnished by possibilities and made beautiful by half-beliefs," says a recent writer in the *Spectator*, who urges us to keep our hearts open to ghostly visitants.

One may doubt if such doctrine is greatly needed at this time. We should prefer to see such an appeal to humor and to common sense as should make it impossible to mistake a Mrs. Eddy, a Mrs. Tingley, or an "Elijah" Dowie for a founder of religion. The scientists, too, have something of tolerance to learn. They must contrive to make their austerely impersonal mistress acceptable to average human nature. Rationalism, which ever advances but holds no conquered territory fully in subjection, must find prophets who will plead with the fervor and compelling force of a Ruskin or a Carlyle. Superstition has never failed of persuasive prophets. Rationalism has not yet learned the art of competing with the zealot and the charlatan. To the mass of charlatans or self-deluded leaders of the credulous, it has had but one Huxley to oppose. Small won-

der that the balance swings temporarily to the side of superstition.

## THE MUSEUM OF ST. GERMAIN.

PARIS, November 7, 1902.

St. Germain is famous, as every one knows, for the Pavillon Henri IV. and for the Castle behind it, built by François I.; it is also famous for the Museum in the Castle. No doubt the building strikes you first. Its remarkable state of preservation is due to the fact that, since Napoleon III. to this time of writing, it has been reërected, as money allowed; and the few crumbling stones here and there date from his time. Why he conceived this ruinous passion for St. Germain becomes evident on the ground floor, where his staff of wise men got together everything they needed to write his work on Cæsar's Commentaries on Gaul. Going from there to the top of the palace, you leave Napoleon and plunge into prehistoric Gaul—by which is frequently meant Gaul long after Cæsar, but lost to his refined and historic influence. Walk through these rooms to the last of them and you find what I went to see: a new collection, just presented and soon to be opened, of bits of bone and ivory, carved by beings whom it would be unscientific to speak of as having done anything but exist.

It should be said the collection isn't new. Prehistorians had long known of a gentleman, living in the south of France, who had excavated on his own responsibility, and, as luck would have it, dug close to the roots of the human species. The man himself, M. Piette, was there, in the company of the Curator, when an official friend and I arrived. He was old, somewhat round-shouldered, but full and ruddy in the face, with eager blue eyes. He has published a few pages, rather against his wish, for private circulation; he has written a large book, finished long ago, to which the illustrations were ready years since. But mistrust and love of truth have kept the pages at home, and it is doubtless with regret that he is about to publish, for private circulation, an edition so small as to seem already rare. Let me add, he is one of a class. The French provinces are full of men, without great means and with little education, who suddenly surprise the museums by having long followed, and sometimes, as in this case, with method and keen intelligence, some scientific whim. Here, then, were M. Piette's fruits, and by them will he be judged: flakes and sticks of ivory and bone, scrawled over with designs or carved into various shapes.

They were found in geological strata different from ours. On learning this first, I closed my eyes a moment, being dazed. These are not mastodons and behemoths, which a skilful set of wires and iron poles puts on their legs once more; nor an ichthyosaurus which presumably swam in deep seas where we now live comfortably with an address. This is human work of a high order. Down one stick of ivory were carved several horses' forelegs in fairly high relief, the fetlock and hair being rendered to perfection. There were many bone needles, and plaques about as large as a dollar piece, with quaint designs cut in. A few nude figures, male and female, were more primitive, but not more so than some old French and Italian pieces I have seen. All this dates back—reckon yourself. It was altogether bewildering.

The collector took up one piece, which in his slow but enthusiastic speech he described as an arm, with a cape over the shoulder. My friend, who is an authority and somewhat slower in discerning such things, had rashly described it as a leg, but was converted. One of the nudes wore some sort of suspensory. I confess the dress of this prehistoric generation seemed to me as insufficient as it was hypothetical, and I shall not believe the next writer on these subjects when he describes it as consisting of the things I doubtfully have mentioned.

As I was leaving, some one remarked this was no longer a palace, but the people's palace. A note of Socialism in such surroundings rang out strangely. It is characteristic, however. Old manors, old castles, old buildings of every sort all over France are being turned more and more into museums. The vaulting is repaired to hang curiosities from; and the walls that not so long ago were covered with brocade or painted wainscoting, disappear behind the works of some obscure school of painting. Does the old palace thereby become the people's palace? Is science really humane and social, and is the scholar so much more modest and affable than the courtier or the aristocrat? I should not like to give my opinion on a subject so modern and so obscure.

Meanwhile, my friend and I had emerged on to the roof of the palace. This, and others of course, are each and all the finest views of the country about Paris. The forest on one side, russet and green; the valley of the Seine toward Montmorency, and Paris on the other; the dip and then the hill crowned with the arches of Louis XIV.'s aqueduct over Marly; and round over the slopes and hills west again—this, all in blue hazes and rich autumn lights, made one swear that the French landscape was the only one. Looking down into the courtyard, you saw the wonderful Renaissance building, crowned with the royal coping; a salamander with an F, on which in one case, without great effort, had been hewn an R—I forget if the salamander was there also. A last contrast awaited me on the ground floor. We entered the chapel built by Louis XIII., of which, by the destiny presiding over restorations, only the stone vaulted roof remains. I was lost in making out some old medallions and body-color on it when Science pulled me by the sleeve. The chapel is devoted to a collection of casts of "prehistoric" Gallic tombs, piously disposed, and looking much older than the glass and tracery and stonework—all being of to-day.

Which is the best of all these periods? The most bewildering certainly is M. Piette's. Even if one's interests and studies do not lead one back, or rather down, so far, the Museum of St. Germain is a great school for historic modesty. Nowhere else do you see so clearly what an orderly pandemonium it has been down here ever since the sun first rose, and how preposterous it would be to expect much of the art of ivory-carving when the very tusks *they* worked on *then* came from God knows where.

TRUMBULL STICKNEY.

## FERSEN AND MARIE ANTOINETTE.

PARIS, November 1, 1902.

I have had occasion at various times to speak of the historical studies of M. G. Lenôtre on the time of the French Revolution; they are all marked by a very impartial spirit, by almost passionate research for the truth, and by a total independence of any partisanship. In every sense, M. Lenôtre has all the qualifications of a true historian. None of his studies has impressed me more than what he has recently written on a personage whose name will be for ever connected with that of the unfortunate Queen Marie Antoinette. The very name of Marie Antoinette ought to be a remorse to France. Whatever may have been her faults—and in reality they were very trifling—the treatment she received from a country where she arrived almost as a child, and where she became for years a Queen; the terrible martyrdom she had to suffer in punishment of faults which she had not committed, and which were those of generations; and in the end her cruel execution, must fill every Frenchman having any feelings of humanity with pain and shame. I pass almost every day the so-called Expiatory Chapel which was built by order of Louis XVIII. in order to receive the remains of Louis XVI. and Marie Antoinette, and I never do so without thinking of these victims of the Revolution.

Marie Antoinette had a real friend, who did all it was possible to do to save her.—I mean Count Axel von Fersen. Fersen belonged to an old Swedish family. In his youth he travelled for three years all over Europe, with a governor. He stayed some time in Brunswick, at a military school; at Turin, where he took lessons in philosophy; at Strasbourg, where he attended lectures on many subjects. After this preparation, in the winter of 1773 he made his début in French society, and was presented at court by his ambassador. He was tall and handsome, with fine manners—"the immense advantage," says M. Lenôtre, "of being a Scandinavian, which gave him an irresistible prestige." Marie Antoinette was only Dauphiness at the time. It was the fashion for the greatest ladies to go to the masked balls at the Opéra. The Dauphiness *intrigued* Fersen (to use the customary expression) at one of those balls; and, after a long conversation, condescended to lift her mask and to make herself known to him. The crowd which surrounded them obliged the Queen to retire to a box. Fersen received on that occasion what the French call the "coup de foudre." This incident decided the whole tenor of his life.

He often saw the Queen again at Versailles; she invariably was very civil to him. He was discreet, respectful, almost timid. Nothing authorizes the comments which were sometimes made on the favor shown to Fersen. The Swedish Ambassador, Count von Creutz, wrote to his King, Gustavus III., at the time when the Dauphiness became Queen (Louis XV. died on May 10, 1774), that "it is not possible to have a wiser and more decent behavior" (speaking of Marie Antoinette). Fersen, however, judged it necessary to leave Paris after Marie Antoinette's accession to the throne. His absence lasted four years; when he returned to Versailles, in August,

1778, he was received by the Queen as an old acquaintance. In the letters which Fersen wrote to his father, we read: "The Queen, who is the prettiest and most amiable princess I know, has had the kindness to ask after me frequently. She asked Creutz why I did not come to her *jeu* on Sundays." In another letter he writes: "The Queen always treats me with kindness, and I often go and pay court to her at her *jeu*, and she addresses some kind word to me every time. As people had spoken to her of my Swedish uniform, and she expressed a desire to see me in this costume, I shall go in it next Tuesday, not to the Court, but to the Queen. She is the most amiable princess I know."

Jealousy and spite are necessary ingredients of court life—one might say, of worldly life. Creutz writes to Gustave III. this letter, which is kept in the archives of Upsala:

"I must confide to your Majesty that young Count Fersen has been so favorably regarded by the Queen that some persons have felt annoyed by it. I confess I cannot help thinking she has a leaning towards him; I have seen some marks of it which admit of no doubt. The young Count on this occasion showed admirable conduct by his modesty, his reserve, and especially by the resolution he took to go to America. By going away, he removed all possible dangers; but it required a firmness beyond his years to surmount this seduction. The Queen could not take her eyes from him during the last days; when looking at him, her eyes were full of tears. I beg your Majesty to keep this secret to yourself and to Senator Fersen. When the departure of the Count was known, all the courtiers were delighted. The Duchess of Fitzjames said to him: 'What, Sir, you abandon your conquest?' 'If I had made one,' said he, 'I would not abandon it; I go away free, and unhappily without leaving any regrets behind me.' Your Majesty will acknowledge that this answer was marked by a wisdom and a prudence beyond his years."

Fersen came back from America in June, 1783. He accompanied his King in a journey through Germany, Italy, and France. Louis XVI. gave him the colonelcy of the Royal-Swedish regiment; as he was also Colonel in Sweden, he divided his time between Paris and Stockholm. In 1790 he established himself completely in Paris; he had gained the entire confidence of Marie Antoinette, who was in reality friendless.

"We can affirm," justly says M. Lenôtre, "from her letters and those of Mercy [the Austrian Ambassador] that she tried all she could to love her husband, without succeeding completely. Her society at Versailles was composed only of vain men, accustomed to easy successes. Her light-headed brother-in-law, of whom she fears the *polissoneries;* the *mauvais sujet* Tilly, who is her page; the bold Besenval, who attributes the excesses of his language to the license of a soldier; Vaudreuil, skeptical, languishing, full of mannerism; Lauzun, whom she is obliged to dismiss from her presence—all paid their court to her, and it is a wonder that we can affirm, notwithstanding their half-confidences and their mysterious reticence, that none of these puppets tarnished 'the white soul of the Queen.'"

In 1791, when she was abandoned, when the Court had become a prison, Fersen reappears. She knows that he has always loved her; she knows that he is worthy of confidence. We have fortunately some documents which throw a little light on the relations that began at that time. After the flight to Varennes, many papers were seized at the Tuileries and at the houses of the persons who were suspected of having favored this flight; but all of them were not used. After some time, many were kept in the upper part of the Palais de Justice and forgotten for half a century. M. Bimbenet, a lawyer of Orléans, classified them about sixty years ago. M. Lenôtre does not tell us who had the chance of finding among these documents seven letters addressed to Fersen by a lady whose name remains unknown, and which were opened during the inquest that followed the flight to Versailles. The letters had been addressed to him after he had himself left Paris. They were written by a lady who had emigrated to England. Had she been a mistress of Fersen? M. Lenôtre thinks so; at any rate, she loved Fersen passionately, but she had discovered that he had himself a passion for the Queen. "He loved her respectfully, with an irresistible and profound love, all the more since she was isolated and unhappy and he had sworn to save her." The unknown lady had sacrificed her own passion. "I desire," she says, "to see you soon in Stockholm as a brother whom I cherish; I have no other sentiment left for you; I have made this difficult effort to obey you." And in another letter: "You ought to be satisfied with me; I am now at the point which you have desired. I shall feel only friendship for you; I ought never to have had another sentiment, or at least I ought to have concealed it in the bottom of my heart. It is the greatest sacrifice I can make for you." The unknown lady who had received Fersen's dangerous confidence never names the Queen; she calls her "a certain person," or "the person to whom you are attached."

The *émigrés* in London must have known something of Fersen's passion; some of them blamed Fersen for endangering the reputation of the Queen. The unknown lady writes to him: "I have had a quarrel on this subject with my husband; I don't see things as he does, and I think that at this moment you could not do enough to prove your attachment, by not leaving her, and by giving all the proofs of it which depend on you. What others blame, I find sublime, and I cannot but esteem you the more."

Fersen wrote a number of letters, sometimes in cipher, to the Queen; his style, even in cipher, is very guarded; the short answers of the Queen are very affectionate. Some of them, in their brevity, are very touching: "Don't be uneasy. . . . Don't torment yourself too much on my account. . . . When shall we meet again quietly? . . . Adieu, I am wholly yours. . . . . Adieu, my dear Rignon [it is one of the names she gives him in her letters]. I embrace you very tenderly." Fersen had not the courage to destroy all these notes, but he defaced with ink the most intimate parts of them. "We can follow the phases," M. Lenôtre says, "of this reciprocal affection, which was like the last ray of sunshine in the life of the Queen." We must remember that she was a prisoner, that Fersen had but one thought—to take her out of her prison. He was the chief agent of the flight of the royal family. He arranged all the details with Bouillé and Choiseul. He marked the places where the King would find protection. He studied the road, and the relays of the post; he procured false passports, with the help of two foreigners, Quentin Crawford, an Englishman, and the Baroness de Korf, a Russian lady. He procured a travelling chaise, provided money, corresponded with the courts of Austria, Sweden, and Spain. He carried under his arm, day after day, the linen which the Queen needed on the journey; he found maids, he saw to every detail. The postchaise was kept in his stables; he placed in it all the necessaries for the journey. When the night of the flight came, he himself received in an old hackney-coach, in the court of the Tuileries, the King and Queen; he was dressed as a coachman. He took them to the barrier where the postchaise was in waiting, and conducted them himself as far as Bondy. There he parted with them, and a rendezvous was arranged at the Château de Thonnalle, near Montmédy. Two days afterwards, he learned the news of the arrest of Louis XVI.

As soon as she was back in the Tuileries, the Queen writes a word to him: "I exist. . . . How uneasy I have been about you! . . . Don't write to me. . . . Be easy. The Assembly will treat us mildly. . . . Adieu. I shan't be able to write to you any more." Several letters, however, were still exchanged, with many precautions. On the day of her execution, Marie-Antoinette wrote these lines on a page which still preserves the marks of her tears: "I had friends; the idea of being separated from them forever, and their pain, are one of the greatest regrets I have in dying. Let them know at least that to the last moment I thought of them."

# Correspondence.

## HISTORY IN WILLIAM AND MARY COLLEGE.

To the Editor of The Nation:

Sir: As several persons seem to be striving in the public prints to acquire for certain colleges the honor of being the first to encourage the study of history, I desire to present the claims of William and Mary. I think that there is no doubt that she was the pioneer college in this interesting field, just as she was the pioneer in the fields of modern languages and of Constitutional and municipal law. Now as early as 1723 the Rev. Hugh Jones, professor of mathematics at William and Mary, suggested the establishment of a chair of history. While the chair was not established until many years after that time, he illustrated the subject in a very intelligent and original manner by writing the 'Present State of Virginia,' the first historical production in America to proceed from the hands and brain of a professor in a college. Thirty years later, William Stith, a graduate of Oxford University, and an historian whose work on Virginia entitles him probably to the first place among American historical writers of the eighteenth century, was President of the College, a circumstance also which may have had its influence in shaping the work of the College in after years. At length, in 1779, Mr. Jefferson, who was himself a great student of history, in connection with Dr. James Madison, President of the College, reformed the College curriculum by introducing the study of the modern languages,

and of Constitutional and municipal law. In the latter department, although the subject-matter of the chair was civics and law, the questions of Colonial and English history as illustrating the Constitutions of Virginia and of the United States received largely the attention of George Wythe, the celebrated preceptor of the two Virginians, Jefferson and Marshall. Judge Wythe was succeeded by Judge St. George Tucker, whose published lectures on Constitutional law involved the history of the slave question and many other questions coming within the scope of a chair of history.

The first distinct chair of history by that name, however, was that of Louis Hue Girardin, who, under Mr. Jefferson's guidance, wrote the fourth volume of what is known as Burk's 'History of Virginia.' This gentleman was a professor in the College from 1800 to 1805, but, unfortunately, the Faculty book for the period in which he taught is lost. As editor, however, in 1805, of a magazine entitled *Amœnitates Graphicæ*, he styled himself "Late Professor of History and Geography in the University of William and Mary." The instruction imparted by him was assuredly something different from "civil history," which, as a branch of ethics treating of the duties of the citizen and the State, had been taught in the College by the professor of moral philosophy from its earliest inception.

After 1805 the fortunes of the College were very much depressed, but in 1820 a vigorous effort was made by the Board of Visitors to restore the institution to its former usefulness. Rev. Richard Keith was elected professor of "history and humanity," and in regard to him we have fortunately the faithful light of the Faculty book to guide us. He qualified before the Faculty on December 5, 1821. He gave three lectures a week in history and three in the classics. His text-books in the former were Hume's 'History of England' and Ramsay's 'History of the United States.' Mr. Keith served for about a year, when he resigned on account of ill health. In a few years (1826) he was succeeded by Thomas R. Dew, and there can be no question to any one who examines his 'Digest of the History of Ancient and Modern Nations' that he stands in the forefront of all teachers of history in the Union during the period in which he lived. Under his vigorous administration as President, lasting until 1846, the College attained a degree of prosperity never before achieved. His successors in the chair of history were George Frederick Holmes, afterwards for many years professor of history at the University of Virginia, Henry A. Washington, who was employed by Congress to edit the works of Thomas Jefferson, and Robert J. Morrison, whose name is identified with that of President Ewell in the publication of the Historical Catalogue of the College.

This carries us to the war between the States in 1861, when the College was destroyed by the Federal troops. After its restoration on the same walls, the study of history was resumed. In 1898 the subject of American history, linked with that of politics, was separated from the general study of history, and assigned to the duties of the President. This closes a hasty account of the study of History at William and Mary, but I hope the account may prove of some interest to your readers.

LYON G. TYLER,
*President and Professor of American History and Politics.*
WILLIAM AND MARY COLLEGE,
WILLIAMSBURG, VA., November 11, 1902.

## ONE HUNDRED TWENTY.

TO THE EDITOR OF THE NATION:

SIR: I am interested in discovering the originator, or the first user in print, of the expression "one hundred twenty," in place of "one hundred and twenty." Mathematicians say that the elliptical form originated in a desire to avoid ambiguity in reading numbers containing decimals, but I have seen no proof of this. The earliest occurrence of the shorter form that I have found anywhere is in Daboll's 'Teacher's Assistant,' second edition, 1802. (The first edition has not been available.) In this work the form occurs but once (p. 23), and no attention is called to it. After this time I have found no example of the ellipsis, outside of later editions of Daboll's work, until 1848, when it appears as the only form in a "new edition" of Greenleaf's 'National Arithmetic.' From this time on, it occurs with increasing frequency, although it is not the established form until late in the '70's, both expressions being used indiscriminately in the introduction to the 'National Arithmetic,' editions of 1856, 1859, 1862, and 1865. The earliest explicit instruction for the use of the shorter form that I have found is in J. B. Thomson's 'Complete Graded Arithmetic,' published in 1882: "In reading numbers expressed by three or more figures, omit the word *and* after hundreds" (p. 9). The total number of arithmetics that I have examined is 62, and of this number 25 use the longer form. My researches were limited to the collection in the University Library.

In the light of these facts I shall, until I receive further information, hold to the hypothesis that the first appearance of the shorter form was not an invention. It was a sporadic case, a spontaneous variation, which was preserved because it was found useful. The idea that it was invented because of its usefulness in avoiding ambiguity in reading decimals, I shall hold to be a sort of *Volksetymologie*, got up after the fact. But I am open to conviction.

The question interests me, I ought perhaps to say, from the rhetorical standpoint, not from the arithmetical. To the form "one hundred twenty" I have a pronounced antipathy, which is not in the least diminished by my awareness of the economies of the phrase from the mathematical point of view. In part the antipathy is traceable to the circumstances under which I first heard the expression, in part to the sound of the words. The elliptical phrase was first pronounced in my hearing by a pedantic, affected person, whose dress, speech, and manner were alike distasteful to me. A vivid image of this offensive individual arises in my mind as often as I hear the phrase. But the antipathy is strengthened by the seeming collision or huddling of the words due to the dropping of the conjunction. I suspect that many others are similarly disposed toward the expression.

FRED NEWTON SCOTT.
UNIVERSITY OF MICHIGAN, November 12, 1902.

## SIMILARITY OF TITLE.

TO THE EDITOR OF THE NATION:

SIR: In choosing 'Retrospect and Prospect' as a name for Capt. A. T. Mahan's book recently published by Messrs. Little, Brown & Co., and noticed in the *Nation* of November 13 (p. 381), it is an interesting fact that both the author and the publishers seem to have overlooked 'Retrospects and Prospects,' a volume of essays by Sidney Lanier, published by Messrs. Scribner in 1899.

GEORGE S. WILLS.
WESTMINSTER, MD., November 14, 1902.

# Notes.

The *Journal of Comparative Literature*, to be edited by Profs. George E. Woodberry and J. B. Fletcher and Mr. J. E. Spingarn, and published quarterly by McClure, Phillips & Co., will make its first appearance on January 1, 1903. Its contents will relate to international literature, past and present, and its articles will be printed, as a rule, in the language in which they were written. Leading articles will be followed by signed reviews, and these by abstracts of periodicals. France, Belgium, Denmark, Holland, Switzerland, Germany, Italy, Austria promise collaboration (the new French Ambassador at Washington is on the list of names already published). British and American universities are also counted on for support. Columbia University is the *Journal's* editorial headquarters.

The Complete Works of John Lyly, now for the first time collected, are about to issue from the Oxford University Press under the editorship of R. Warwick Bond, M.A., who furnishes a Life of the author and an estimate of his importance to English literature.

James Pott & Co. announce 'The Builders of the Republic,' by Margherita A. Hamm; 'The Life and Works of R. B. Sheridan,' in two volumes; 'The Inner and Middle Temple,' historical associations, by H. H. Leigh Ballot; 'Five Great Painters of the Victorian Era,' by Sir Wyke Bayliss; and 'The Mediterranean: Its Storied Cities and Venerable Ruins,' by J. T. Bonney.

The indefatigable veteran, Professor Mommsen, will add to the Corpus of Latin Inscriptions published by the Berlin Academy a new volume of considerable size, devoted entirely to the Latin inscriptions found in the Orient. It was in 1873 that he published the first volume of these inscriptions, but meanwhile there has been such an accumulation of new material that a further volume has become a necessity. His colaborers are his pupils, Hirschfeld and Domaszewski.

From Herbert B. Turner & Co. of Boston comes a new series of standard classics represented at the outset by Swift's 'Tale of a Tub' and Stevenson's 'Virginibus Puerisque.' The volumes are of a size for the pocket, though a little heavy for that conveyance, are clearly printed in large type, and, if one may judge by the clever reproduction of an eighteenth-century ruled page which the 'Tale' presents, are to be individualized typographically. The Stevenson booklet, with its top-heavy headlines, shows the dangers that attend such experiments.

The "Century Classics" of the Century Company, with their all-round excellence of manufacture, proceed with Lamb's 'Essays of Elia' and Sterne's 'Sentimental Journey,' the latter eked out with Thackeray's damnatory character of Sterne, from the 'English Humorists,' by way of preface. Whether this is likely to prove an antidote or an appetizer for the Young Person, the student of human nature will decide. But this handsome series is not for youth especially.

Whatever one may think of Kenneth Grahame's 'Dream Days' as a book for children, there can be no question of the delightful quality of Mr. Maxfield Parrish's illustrations to the new edition elegantly brought out by John Lane. Imagination, grace, and humor are appropriately mixed in them, and the draughtsman's hand is always firm. Whatever he borrows he makes his own. The unindexed tailpieces, as well as the full-page designs, will not escape notice and commendation. The cover is hardly up to the general level.

Two papers, ascribed with certainty to Thackeray, in *Fraser's Magazine* (1837-39), viz., "A Word on the Annuals" and "Our Annual Execution," have been tastefully reprinted in Philadelphia by H. W. Fisher & Co., under the title of the second paper, which contains the original form of Thackeray's ballads "The Knightly Guerdon" and "The Almacks' Adieu." It also includes, as a favorable selection from the Annual under review, Monckton Milnes's "I wandered by the brookside." The reprint is verbatim from *Fraser;* and the edition is limited.

Mr. J. P. Mowbray's 'A Journey to Nature,' having given pleasure to the readers of the *Evening Post*, passed naturally, with some revision and addition, into book form, and now reappears with illustrations by Henry Troth (Doubleday, Page & Co.). These are of two sorts, pen-drawn vignettes and full-page photographic views, each to be praised in their way. In his chapter on Indian Summer, Mr. Mowbray recognizes only the "laggard days in November . . . left behind in the autumnal procession." Either we have already had our "spell," beginning in October and overlapping the third week in November, or the sufferers from the coal famine have yet a respite in store for them.

Canon Rawnsley has well earned his reputation as the most diligent and devout exponent of the cult of the English Lakes and the Lake School. 'A Rambler's Notebook at the English Lakes' (Glasgow: James MacLehose & Sons), is the fifth volume of his impressions of Lake scenery and the life of the dalesmen from the point of view of one for whom every path that Wordsworth may have trodden is hallowed, every stone on which Southey may have sat an object of admiring awe. For a somewhat limited circle of readers, the remotest connections, the most trivial reminiscences of the "Lakers" possess an interest which to outsiders appears almost miraculously inexhaustible; and to the mere Philistine, positively morbid. There are those, fit though few, who will read, in the proper spirit, of the habits and last years of Wordsworth's "cousin once removed," and of the Canon's pilgrimage, each year piously renewed, to the "jocund company" of the Duddon daffodils. We confess to a preference for the essay on otter-hunting or the description of the November glories of Derwentwater. Canon Rawnsley has a pretty gift for describing the various phases of outdoor life in the north country; it is the more to be regretted that his enthusiasm too often borders on the mawkish; too often illustrates the fact that, to a certain form of Wordsworthian "pietas," it is impossible to walk safely within the narrow limits of the sublime. The Essay on the "Diamond Jubilee Bonfires" is a collection of patriotic statistics that is hardly worthy of republication in a permanent form. The volume is adorned with reproductions from photographs of the Lake district, and has the usual accompaniment of the author's original verse.

Mr. W. S. Crockett's 'Scott Country' (London: Adam & Charles Black; New York: Macmillan) is a rambling book, full of borderside lore thrown into simple form. Those to whom it is a delight in itself to linger over the names of Eildon, Yarrow, Traquair, Teviot, for whom not only Scott but Hogg and Leyden have charms as binding as those in the book of Sir Michael and as straight from faerie as the rhymes of True Thomas—they will turn these pages and pass back for a while among the border hills, under the gray sky, by the dark streams. To all such the book can be commended. To others it will be a thing of naught. Mr. Crockett's literary powers are trifling; his naïveté is astonishing. Yet his love of the border goes far to save him. The best in his book is its mist of memory, its wealth of illustrations, often very good, and the numberless ballad notes, of which it is full.

The only link in 'The Holy Land, Painted by John Fullylove, Described by John Kelman' (Macmillan), between the illustrations and the text is that both are impressionistic, full of color, and lacking in detail. Otherwise, they appear to have no relation of origin or plan. Mr. Fullylove's water colors have been most skilfully reproduced. They undoubtedly render the land with accuracy, but are lacking in artistic charm. There is little feeling for distance, but some bits of water are very prettily caught, and the more architectural scenes have often a gorgeous reality. Mr. Kelman, on his side, is a close follower of Prof. George Adam Smith. He has not Dr. Smith's luminous power of interpreting geography, but he has picturesqueness and vocabulary, and can turn ideas into sharp-cut concrete facts, or what may pass for such. Fortunately for his method, his first rapture of observation was not deadened by too greatly widened experience; we have impressions here, and not studies. These are always vigorous, and may sometimes be correct; but the six months' tourist who ventures a hundred pages on "The Spirit of Syria" has more even than the courage of his kind, and must be read with caution. Yet—or perhaps therefore—the book is most readable, and fairly fits its illustrations.

Prof. William MacDonald, now of Brown University, but recently of Bowdoin College, treats of 'The Government of Maine' in Macmillan's series of Handbooks of American Government. This series is intended for the use of students in high schools and academies, but we doubt if they can profitably spend their time in acquiring information which is, except to specialists, of the driest character. The work before us certainly gives a clear and accurate account of the governmental machinery of the State, and to a considerable extent summarizes its laws; but the severe compression which is unavoidable with such an abundance of material is not favorable to literary effect. As a political organization, Maine is of interest to the rest of the world chiefly because of its liquor law; but, for obvious reasons, no frank discussion of this subject is here prudent, and it is dismissed with a few lines. Our strictures, however, must be taken as applying to the plan of the series, and not to the manner in which the author has performed his task, which is altogether praiseworthy.

Dr. George Willis Botsford, formerly of Harvard, but now connected with Columbia University, has issued an 'Ancient History for Beginners' (Macmillan), intended to comply with recent action of the American Historical Association, encouraging the schools to give a year to ancient history, "with special reference to Greek and Roman history, but including also a short introductory study of the more ancient nations." This volume follows Dr. Botsford's other books in its bright, readable presentation, and in its copious use of maps and illustrations. Brightness of statement occasionally shows signs of degeneration, and the illustrations sometimes sustain no relation to the contiguous text. The introductory portion, devoted to the Orient, is too brief (forty pages) to be of much value, but it could hardly be otherwise in a book predetermined to treat Greece and Rome in detail, down to the time of Charlemagne, and occupy but one year with classes of beginners. The 400 pages given to Greece and Rome suffer in many ways from the same hard-and-fast conditions. The various lines of development over so long a period cannot be kept fairly in hand and compressed into so few pages without a rigid exclusion of detail, unless it be of the very highest importance. But in the details which would thus be excluded are naturally to be found just the things best adapted to hold the attention of boys and girls in beginners' classes. Dr. Botsford has not solved the insoluble problem thus presented. Pericles, Demosthenes, Alexander, Scipio, Sulla, Cicero, Tiberius, Trajan, and the rest crowd one another across the stage so rapidly that the mind neither gets an adequate impression of their character as men, nor a coherent view of their respective significance in the development of human history.

The sixteenth volume of Mr. Slater's 'Book-Prices Current' (London: Elliot Stock) makes its pick from auction sales in 1901-'02 of 51,000 lots, aggregating £163,207 in amount realized (much the largest in ten years, though the average falls below last year's). The steady increase in the proportion of miscellaneous works is noted by the editor, along with the demand for books having colored plates. As usual, apart from the Bible, the Shakspere competition leads all others. More of Shelley's works are recorded than of Byron's or Tennyson's; Browning, in spite of Browning Societies, hardly cuts a figure. 'Romola' alone represents George Eliot, and brought £19, partly, if not wholly, because of the author's inscription. Dickens slightly outstripped Thackeray, and both ranged substantially with Scott. Boccaccio was more to the fore than Dante; of Petrarch only six copies, all told, were put up. Vol-

taire overshadowed Rousseau. William Morris's admirers for his own sake showed up well. His Kelmscott Press publications under the hammer numbered nine; those of the Vale Press, four.

The excellent little 'American Jewish Year-Book' is now so regular a publication that it calls only for mere mention. Its interest lies in its chronicle of the year, of the Rumanian question and anti-Semitism generally; of Jewish societies, charitable and otherwise, including the Baron de Hirsch fund; and of the Zionist movement. In all, there is much sociological material. As usual, the book is weighted with the report of the Jewish Publication Society, and its seventy-odd pages of members' names.

The last volume of Dr. Rodkinson's translation of the Babylonian Talmud, giving the tract 'Sanhedrin,' is even liker than its predecessors, in respect to its fine mixed feeding, to the proverbial sheepshead. From lawyers to sociologists and folklorists, even to the pursuers of the jests of the market-place, all will find their quarry here. There have been, for example, accusations against the builders of detective stories that their labors went to give suggestions to criminals. But here we read how Rabbi Jose lectured once on Job xxiv. 16, and treated the subject so luminously that next night there were three hundred burglaries in the town, all according to his method. Naturally, "the town-men troubled him." He replied; "How could I know that all of you were thieves?"—which is a fairly valid criticism on many theories of the prevention and propagation of crime. In a short preface, Dr. Rodkinson, if we understand him rightly, indicates his adhesion to a most extraordinary theory of the origin of the Sanhedrin, pushing it back to Moses, and even to Noah. This cannot but suggest a doubt as to the scholarship of his translation, which is evidently a free one. It would be well, too, if he could secure some revision of his English style. There are *anacoloutha* and some curious verbal usages. A translation like this is worth sub-editing.

The compiler of the Century Company's 'Bible for Children,' Mrs. Joseph Gilder, is to be heartily congratulated on the taste, courage, and discretion which she has showed. The Authorized Version has been used, and there has been no finical cutting except of absolutely impossible passages, and no additions or changes. The result is wonderfully readable and infinitely better than the "Bible Stories" of our childhood. Children with these cadences in their ears will surely—not to speak of graver matters—hold fast their heritage of pure English. But it is a blunder with ethical elements in it that on the title-page there is no mention of the compiler. Instead are given the names of Dr. Francis Brown of Union Seminary and Bishop Potter, the one of whom is responsible for four pages of preface and the other for two of introduction. These, unfortunately, are addressed to the parent and not to the child, and, if they come to be read by a child of even ordinary intelligence, may do much mischief. He cannot be helped by learning that we think it well for his advantage to cut some things from the Bible. Nor will the clumsy apology appease him that "care for childhood prompts this, and not blame for the Bible." Still worse is it for him to learn that "many are indifferent to the Bible." All this explaining, apologizing, and protesting may be excellent in its place, but that place was not here, in a book to go into a child's hands. Its place, at the most, would have been on a few leaves, separate and removable, or on one of those slips, suggestive to the indolent reviewer, which prudent publishers now send out in their books. Added are twenty-four illustrations, all from great paintings, but not all from "the old masters," as stands on the same unhappy title-page. There is a schoolgirl in anecdote who assures a friend that she has an uncle in Rome, "one of the old masters." It is only less startling to find Rubens, Murillo, Rembrandt, Van Dyck, and Sir Joshua Reynolds figuring under that rubric. But the part of the book which is good is very good; the compiler has done her task well.

Johns Hopkins University preserves the record of its anniversary celebration (the twenty-fifth) in a neat volume printed at the University Press, Baltimore, Md. This book contains the addresses in full, a list of delegates from other institutions, a register of alumni attending the celebration, and an account of the presentation of a jubilee volume to Prof. Gildersleeve by his former students; in all, a record which all Hopkinsians and others who attended the ceremonies of last February will wish to possess.

The proceedings at the celebration of the two-hundredth anniversary of the founding of Yale College, a year ago, are recorded in a sumptuous volume now published by the University. The number of functions crowded into four memorable days has made it difficult to do them all justice within reasonable compass, and there is little attempt to describe the spectacular effects that constituted so marked a feature of the occasion. Much space is necessarily given to programmes and lists which are of course unreadable, and of some of the longer addresses only abstracts are given. Professor Fisher's admirable account of the relation of Yale College to theology and missions, however, well deserved to be republished without abbreviation, and it occupies fifty of the 600 pages of the record. The book seems to be in all respects a fit memorial of a celebration which may well be called glorious.

The Bibliographical Contributions of the Library of Harvard University have just been resumed, after a pause of four years. No. 54 fitly consists of a bibliography of Justin Winsor, by William F. Yust. Mr. W. C. Lane, Mr. Winsor's successor, calls attention to the remarkable chronological exhibit thus made of Mr. Winsor's insatiable and varied activity. On pp. 29, 30, Mr. Winsor's contributions to the *Nation* 1880-1896, are listed by themselves. A blank book labelled "Poems of Art and Nature," original and translated, was found among his effects, arranged as if for publication.

German topics, including regulations for insurance companies, the Slaby-Arco system of wireless telegraphy, and economic conditions occupy the principal place in the Consular Reports for November. Other subjects treated are the American plough and the Russian farmer, and the Lyons congress for protection against hail. The testimony as to the efficiency of the "grelifuge cannon" was conflicting, but it was unanimously voted "to continue the war against hail, on condition that it should be done systematically." The Department of the Rhone "claims to have established the first cloud-firing post. It now has 834 cannon, covering 45,000 acres of vineyards." Our Consul-General at Yokohama reports an increase of the foreign trade of Japan, but a decrease in value of more than 31 per cent. of goods purchased from this country. The falling off has been chiefly in materials for bridges and buildings, telephones and wire.

The Quarterly Statement for October of the Palestine Exploration Fund is largely given up to Mr. Macalister's report of the excavations at Gezer. The principal results have been "the discovery of sections of a great city wall, of a most important burial-cave, the examination of which has thrown much light on the physical characteristics, funerary customs, and pottery of some of the earliest races of Palestine; of a small *temenos* or high place, containing a stone circle; and of a considerable variety of objects belonging to the later stone age and the bronze age of culture." Some of these antiquities are similar to those found in corresponding strata at Tell el-Hesy, but not in other tells. This suggests the possibility of a close racial connection between the two places, a supposition which is strengthened by the fact that, when Joshua besieged Lachish, "Horam, king of Gezer, came up to help Lachish" (Josh. x. 33). The report is very fully illustrated. Gen. Sir C. W. Wilson discusses the question as to the authenticity of the traditional sites of Golgotha and the Holy Sepulchre.

The German Orientgesellschaft, with headquarters in Berlin, is enlarging its field of operations, and has begun researches in Egypt. Hitherto the diggings have been confined to Babylon, where Dr. Koldewey has made splendid progress; although the number of inscriptions found has been few, other archæological matter has been unearthed in satisfactory amounts. The Gesellschaft, as is openly stated, has far-reaching schemes, the purpose being to establish in Berlin collections of materials for the study of Orientalia that will, if not rival that of the British Museum, yet to a certain degree make it unnecessary for German and other savants from the Continent to go to London for their materials. Complaints have been repeatedly made that the authorities of the British Museum do not welcome scholars from abroad, as was the case in former years. The German society, under the direction of Professor Delitzsch, who has been in the Orient for some five months, has begun its Egyptian work near Cairo, with rich results. Dr. Ludwig Bornhardt is in charge of these researches, and has already published a preliminary account of the undertaking.

The famous Barberini library, containing more than 60,000 volumes, has been purchased by the Vatican authorities. The Italian Government learned of the sale too late to make an offer, and could only satisfy itself that the law for the protection of works of art had not been violated in the transaction, as the sale included only books and manuscripts, but not the picture gallery or statues, or even the family archives. Leo XIII. has expressed his purpose to erect a special building for the reception of these new treasures, and proposes to give scholars free access to the collection.

From Lemcke & Buechner we receive the first calendars for 1903, viz., the seventh

"Meyer's Historisch-Geographischer Kalender" and the "Münchener Kalender," the latter with its customary series of colored arms of German princes and counts, begun in 1895. Meyer, with its illustrations, leaf by leaf, covers the whole globe impartially. Its anniversary department has been enlarged, and a planetary table is now given for the first of each month.

—A new edition of William Ellery Channing's 'Thoreau, the Poet-Naturalist' (Boston: Charles E. Goodspeed) will be welcome to all lovers of Thoreau except those who delight in having what others cannot buy. The first edition was exhausted some time since, though it sold at first very slowly. Thoreau's growing reputation came to the assistance of the book's inherent quality, which did not tend to popular appreciation. It is no enemy, but Mr. Sanborn, who describes it as obscure and enigmatical, and, though rich in recondite learning, without much method, or with a method of its own baffling to most people. Mr. Sanborn, in his introduction to the new edition, tells us with what perversity the first was made. As early as 1853, Channing planned a series of imaginary conversations, in which Thoreau, Emerson, and Alcott, with himself, were to be the interlocutors. Much work was done upon this line, but none of it utilized until 1863, when a part of Channing's 'Thoreau' was sent to Mr. Sanborn, then editing the Boston *Commonwealth*, for publication in that paper. A break in the publication excited Channing's ire, and he recalled the unprinted portion of his manuscript. When 'Thoreau, the Poet-Naturalist' appeared in 1873 it was very different from the papers of ten years before. Its main peculiarity was the introduction of sixty-seven pages, taken from the projected 'Walks' of 1853, in response to the publisher's desire for matter to enlarge the book. One remembers that, similarly, Goethe added to 'Wilhelm Meister' "The Confessions of a Fair Saint," and, here as there, the addition is extremely good. But it is made up of conversations the participants in which were at first left to the reader's guesswork. In the new edition Mr. Sanborn has prefixed, or affixed, their names in most cases, eking out Channing's manuscript hints with his own judgment. As it now stands, no part of the book is more interesting and important than this. But every part of it is treasure-trove for those who care much for Thoreau and his Concord friends. Mr. Channing's self-revelation is not the least valuable part of it. His thought and style are often wilfully eccentric and obscure, but there is more than enough of excellent matter, original and quoted, to condone every fault. Nothing else written about Thoreau comes so close to his life and mind as this delightful and exasperating incoherency. Mr. Goodspeed maintains his reputation for beautiful bookmaking, both in this simple and inexpensive and in the larger and more costly style in which the book is published.

—The 'History of the English Church,' which is being edited by Dr. Stephens, the Dean of Winchester, will eventually comprise seven volumes. Of these, four have already appeared, if we include the instalment just published by Mr. James Gairdner (Macmillan). Indeed, we have before us, as yet unnoticed, the last two volumes of this learned and important series. The Rev. W. W. Capes, in the third volume, covers the whole of the fourteenth and fifteenth centuries, while Mr. Gairdner, in the fourth, continues the narrative through the Reformation period as far as the reign of Mary. In glancing over Canon Capes's table of contents we observe that Wyclif is the only religious leader who receives a chapter to himself. Archbishop Peckham, and Archbishop Winchelsey are also mentioned in separate titles, but we must count them among ecclesiastics rather than among guides of the nation in matters of personal religion. Courtenay does not give his name to a chapter, nor does Wykeham. We may resume by stating that Canon Capes finds much more to say about general subjects like "The Mediæval Bishop and his Officials," "The Cathedral Chapters and their Staffs," "The Clergy and Parish Life," "The Monastic Life," "Friars and Pilgrims," "Schools and Universities," than he does about distinguished individuals—if we except Wyclif. In one respect which we may name, this volume is particularly successful. Canon Capes's predecessors have tended to give Lollardy such prominence as to dwarf everything else in the church history of England during the fourteenth and fifteenth centuries. That this is the most prominent and important subject, if one only be selected, we should be the last to deny. Still, there is a large literature already upon Wyclif and his movement, while the state of the church for fifty years before and seventy-five years after has been unduly neglected by students trained in modern methods of research. Canon Capes's little books on 'The Early Empire' and 'The Age of the Antonines' are so good that his attempt in another and far different field is sure to awaken interest. Certainly no one will feel a sense of disappointment in reading the present sketch. It is strong and graphic, learned and thoughtful. The narrative part is good, not to say unexceptionable in a book of this scope, but the performance reaches an unusually high quality when chronicle is left behind and the discussion of broad ecclesiastical topics begins. As filling a gap in accessible literature, we should think that no volume of the series is likely to prove so useful.

—To Mr. James Gairdner has fallen the difficult and delicate task of writing that part of this consecutive history which deals with the revolt from Rome. Not only is it a great labor to master the available sources of information, but time has not yet adjusted the point of view. A good example of the obstacles which have to be surmounted is furnished by Mr. Gairdner's preliminary remarks on the word "heresy." Now that the Christian world is divided into so many bodies, "heresy" and "schism" have almost lost their meaning. In the age of the Reformation, on the contrary, "the unity of the Church was not only the generally received doctrine, but was also a doctrine which the state felt bound to uphold. The rulers of the state might seek to put the Church under new conditions; they might even seek to discredit some old doctrines. Both these things they did attempt; and, whatever we may think of their conduct, they succeeded largely in their aims. But this did not affect the old belief, held even by reformers, in one true Catholic and Apostolic Church." The test case is that afforded by the period which Mr. Gairdner terms "the Edwardine anarchy"; but even at this time of radical innovation the leaders of revolt were seeking to find "the essential principles of the one true Church." "Heresy," and herein lies an initial difficulty, must throughout be used in a sense which is unlike its ordinary sense. Mr. Gairdner, when he speaks of heresy, does not refer in any way to the truth or falsehood of particular doctrines. He alludes simply to "an arrogant and pertinacious denial of doctrines laid down by authority; and where no competent authority had as yet declared old beliefs superstitious, it was really heresy to dispute them." Thus we encounter a difficulty on the threshold—a difficulty of phrase which is grave enough to demand a whole preface for its explanation. The disputed points involved in any history of the English Reformation are so numerous that they could barely be touched on in a long article. Here we shall only commend Mr. Gairdner's book as a model of learning and fairness, unless, perhaps, we quote one contention which is made on the concluding page. "In the Thirty-nine Articles and in the English Prayer-book itself, the final results of the Reformation were embodied, so far as doctrine and devotion were concerned; and it would be difficult to overestimate their value. No formularies were ever drawn that give so much liberty to the human mind. Truth had been well tested by martyrdoms on either side before they were finally adopted; and while they repudiated the exclusiveness of Rome, they raised no barrier to the freest thinking consistent with belief in revelation. They constitute a more real catholicism than that of the Council of Trent." Such a statement must, naturally, have an ex-parte sound; but Mr. Gairdner cannot for a moment be accused of writing his history to support this view.

—Dr. Alexander Schmidt's 'Shakespeare Lexicon' (Berlin: G. Reimer; New York: G. E. Stechert; Lemcke & Buechner) needs no introduction either to scholars or to the public at large. It has often been characterized as the most useful work ever composed in elucidation of Shakspere, and this description can hardly be rated as unduly enthusiastic. The plan of the book and its execution are alike admirable, and no one is likely to echo the ungenerous words that a distinguished Shaksperean had the misfortune to utter when it first appeared, some thirty years ago. The question is not whether "Schmidt is an *authority*": Schmidt is *indispensable*, and never ought to get out of print. Nor should the text of the lexicon be altered. What is wanted is an occasional reimpression, and additions or corrections should be confined to an appendix. Fortunately, the publisher is wise, and, the book being stereotyped, his interests coincide with his judgment. The third edition, now before us, is practically unchanged, so far as the body of the book is concerned. The sensible remark of the author, in the preface to the second edition, appeals to every purchaser's heart: "Nobody is so rich as not to repine at being obliged to buy the same book three or four times." The present edition, however, has a valuable supplement of about thirty pages, prepared by Professor Sarrazin, well known for his studies in the literary history of "Hamlet." This consists of "new renderings and interpretations," selected, for the most part,

from English commentators, who, Dr. Sarrazin thinks, are the "most legitimate" interpreters. We note, with amusement, that he makes a sharp distinction between Englishmen and Americans, associating the latter, presumably as aliens, with "Dutch and German scholars." But no harm is done and our feelings are not hurt. By the doctor's leave, we shall still do our best to speak and read our mother tongue, which Alexander Schmidt understood so well—rather better, we see, than his editor, who speaks of "commentators *of* the great poet" where the idiom requires *on*.

## VILLARI'S ITALIAN LIFE.

*Italian Life in Town and Country.* By Luigi Villari. G. P. Putnam's Sons. 1902.

When we consider how entirely distinct in most characteristics the provinces forming United Italy are, we must agree with our author that it is no easy task to give a just idea of Italian social life in a short volume. The broad demarcations of north and south, with the strongly marked individuality of their different populations, cannot escape the notice of the most casual observer; but not only the provinces differ essentially in character, thought, manners and customs, cookery, etc.; each important city seems to have retained its own particularities which in the past gave a stamp to the architecture, painting, and sculpture of each place.

In the north the people are industrious, active, full of business enterprise and capacity; they take the lead in politics and in social questions, and consider themselves vastly superior to their southern compatriots, for whom they do not trouble to hide their contempt. The population of the *Alta Italia* provinces consider themselves wronged in having to pay high taxes in order to support the Meridionali in idleness, while the latter are equally dissatisfied, complaining that the Government has always been more favorable to the north, promoting its industries with protectionist tariffs, making more railways and instituting more schools than for them. Moreover, in spite of the depressing conditions of its agriculture, the south, taxed just as heavily, has never received any aid from Government, besides having to endure the most incompetent officials, who seem to be reserved for important Government posts in the south. Before the Union, the debt of the Meridionali was very light, while now they share the public debt equally, notwithstanding the great sacrifices they made and the important part they played in the work of unity. Yet even in the south there is visible improvement. Bari and Naples are becoming important centres of commerce. The great reproach the Meridionali have to bear is on account of their terrible criminal record, and the institutions of the Mafia, the Camorra, and brigandage; the last still surviving in Sicily, as in Calabria and Le Puglie, where occasional cases transpire, though it is no longer an organized power in the province of Naples as of old.

Besides these differences of character, our author cites instances of local rivalries of cities, having their sources in historical feuds; for example, Siena, where to this day Florentines are treated with scant hospitality on account of the battle of Montaperti, in 1260, when the Sienese defeated the Florentines, and became for a while the ruling power in Tuscany. The Sienese attribute all their present difficulties to the jealousy and enmity of the Florentines. They even consider the inefficient train service between the two cities as a result of Florentine bad feeling; on the other hand, they decline to organize any more convenient trains, as it might bring more Florentines to their city to damage their own commercial prospects by rivalry. This provincial exclusiveness is called the "spirito di campanile," and prevails in such towns as Pisa, Arezzo, Volterra, Montepulciano and San Gemignano, while at Rome the pride of Roman citizenship extends from its princes, who hold themselves superior to reigning families, to the beggar, who is superbly contemptuous in his acceptance of small favors.

Our author, writing on the aristocracy, considers that "good society" translates what is meant by *aristocrazia*, for bankers, merchants, manufacturers come under this denomination. Plutocracy has great influence here as everywhere. Titles are very common, there being no law of primogeniture in Italy, besides which they are frequently adopted by those who have no right to them. On the other hand, there are many of the most ancient and noble families in Venice and Lombardy descended from burghers of the free cities, "optimates," who are called *nobili* or *patrizii* without bearing any title. In the early days of Italian unity the Piedmontese nobles had much influence in the government of the new state; they were the King's immediate advisers, and are said to have promoted the common good as far as it was in their power. Their special importance ceased when Turin was no longer the seat of government, though some of them still take part in politics. They are as a class intelligent, cultured, and interested in commerce and general progress. The Lombard nobles, both for their immense wealth and for their active participation in commerce and industry, take the most prominent position among the upper classes. They travel much, and entertain with munificence at their splendid villas about the lakes, in the Brianza or on the plains. It is to their initiative that the Lombard towns owe their prosperity. The Tuscan nobility have the quality of being good landlords; they live on their estate part of the year, on friendly terms with their peasants, although their headquarters are at their ancestral palace in the town to which they belong, and where, as the one relic of their commercial origin, one often sees a little shop door in some out-of-the-way corner with Canova di Vino over it, in which wine and oil are sold at retail. Tuscan nobles are considered intelligent and shrewd, but extremely conservative and narrow-minded, and rather mean. Their innate courtesy and fear of interfering with the prejudices of their neighbors make them very inefficient in politics, and their economical instincts prevent them from being hospitable, even when they are quite wealthy. The métayer system of land culture brings about a feeling of part proprietorship with the peasant, and fosters that healthy republican feeling so noticeable in Tuscany. The aristocrats of the south are mostly absentees from their estates, exercising feudal rights in defiance of the law, and exacting money returns from their lands, which are managed by extortionate bailiffs. They care only to make a show in Naples or Palermo or Rome, with fine carriages, smart clothes, and other luxuries. When in their old fortified castles in Calabria or Sicily, they live like feudal barons, and ride about with armed retainers, who are devoted to them, although the peasants on their estates, suffering as they do from their callous indifference to their welfare, regard them often with sullen hatred.

Titles are often acquired, either by giving large sums to charities, or by purchasing a landed estate to which one is attached; sometimes they are given as a reward for public services either in the army or in politics. Another very striking manner described by our author is by adoption, as follows:

"There are a great many titled people, especially in the south, who have gone down in the world and who exercise the humblest professions to earn their bread. The aspirant to nobility—a wealthy contractor, or a fortunate speculator in stocks—discovers one of these *nobili decaduti* and persuades him for a consideration to adopt him as his son. At the death of the chimney-sweeping prince or the cabman earl, the parvenu adopted son inherits the title, and plain Signor Donatini blossoms forth into the Principe di Torre San Gennaro, with coat of arms, coronet, family portraits, and liveries all complete. His position, however, is not altogether an enviable one, as he is much laughed at by all who know the story, and everybody does get to know it."

The dislike for work is the bane of the upper classes. The prejudice that a gentleman should occupy himself with landed property only is gradually giving place to more enlightened ideas, but young aristocrats brought up in priestly colleges are not fit for anything but the usual life of the butterflies of fashion, so similar in every country. There are in Italy many young, healthy men who prefer to spend their time in cafés, the theatres, and sauntering about the streets on a meagre income to turning their attention to any useful work. Mr. Villari considers that even among the laboring classes work is looked upon as a painful necessity, and that, were it possible, most people would lead an idle life.

The factors of the great differences of character among Italians of different provinces are shown to be the climate and the government to which each province has been subjected for centuries. For instance, Austrian rule in Lombardy, so oppressive in political matters, seems to have been beneficent in developing a business capacity and public spirit, and fostering an appreciation of honest civil administration. The language also varies immensely in its dialects, so that even Italians sometimes seem to be talking an unknown language when they use their special dialect before a compatriot of a far-off province. In the south there are remains of Albanian and Greek colonies, and in Sicily and Sardinia the race partly derives from the Arab, but the population of the mainland has been composed for centuries of different groups of the same race. Notwithstanding all these diversities and discordant elements, a unanimous feeling pervades all Italy of the great importance of the union of the kingdom. As a signal proof that there never has been any political party based on regional particularism of any significance, Mr. Villari recalls the proposal of some Milanese Radicals and Socialists to create a separate state with Milan for capital. This plan was so unpopular that they withdrew it of their own accord. On the formation of a Cabinet by a new minister the first consideration

seems not the fitness of each member for his post, but that ministerial honors should be equally distributed among Lombards, Tuscans, Romans, Piedmontese, and Sicilians. The same sense of fairness to all regulates the creation of new Senators and the conferring of honors. Conscription has done much to encourage a sense of brotherhood from the necessity of speaking Italian instead of the special dialects. The military authorities make it a rule also to have men of all the different provinces serve together, and they learn thus by hearsay of the condition of the whole country.

We believe Mr. Villari to be mistaken when he says there is no feeling in Italy against the Jews; we should say that there is a strong prejudice against them. Even the wealthiest are often at great disadvantage in society, but they are tolerated on account of large donations of money, or public services of some kind. Foreigners are not generally admitted to Italian society unless they are especially introduced to some leading members. So many of the noble families have married American and English women that the exclusiveness of former times is gradually disappearing.

The love of outward show is a striking feature in Italian life. Great sacrifices of personal comfort are made for the sake of appearances, especially in the south. Our author says:

"In Naples and Palermo, life is not considered worth living without a carriage. The following anecdote illustrates this feeling: An American gentleman who was spending the winter in Naples, had taken a flat in a palazzo, the first floor of which was occupied by a noble family in somewhat reduced circumstances. He noticed to his surprise that every day he met a servant going up or down the stairs carrying a pair of carriage doors. At last the mystery was explained. The said noble family shared a carriage with some other people, but each had its own doors with the family coat of arms to make their friends believe they both had carriages!"

This love of display is especially noticeable in dress. The women of all classes wear very smart clothes out of doors, love brilliant colors, and spend much money and thought on fine apparel, but we do not agree with our author that Italian ladies wear their jewels in the daytime more than the English—on the contrary, it is only at important evening receptions or state functions that foreigners have an opportunity of seeing Italian ladies wearing their splendid jewels, the heirlooms of their families. In England, at the present moment, the display of ornaments and rare gems begins at breakfast.

Great frankness is a striking characteristic of this instructive little book. The author writes of what he knows from his own experience; he has observed much, and recognized many of the deficient sides of the Italian character—the general slackness, the want of moral conscience, the absence of any high ideal, shown in a general desire to shirk difficulties, from the schoolboy at his examination who resorts to cribs, to the politician who makes use of the Mafia for his election. The subject of public education, so important to a young nation, has much occupied the Italian Government, which expends vast sums on the national schools and universities. In his chapter on this subject, Mr. Villari has had his father's (Prof. Pasquale Villari) valuable writings and researches to consult, so that what he says bears the stamp of unquestionable authority. He points out that the great mistake has been to apply the same order of schools throughout a country where the degree of civilization is so unequal, and where, for practical purposes, different schemes of education are necessary. There are five standards of elementary education, of which three are compulsory, unless parents undertake to have their children taught at home. The number of illiterates still existing throughout the country proves that the law is not sufficiently enforced; conscripts, when they begin their military service, are often unable to read and write, and have to learn during their term. Religious instruction is optional, but is generally demanded; there is no feeling against it in Italy as there is in France. The poverty of elementary schools is very great; they are held often in unsanitary buildings, and possess few maps or specimens for object-lessons, and yet they cost the communes $15,000,000, of which the Government grants $325,000. The teachers, who are trained for their work in special colleges, are badly paid. The average salary for a man is from $140 to $265 per annum; a woman receives from $110 to $210 at most.

The secondary schools are divided into classical or technical; the fees are from $20 to $30 a term, from which the very poorest people are exempted. The classical schools are divided into *ginnasii* and *licei*. The age for the former is from ten to fifteen; the *liceo* demands three further years of study. The teaching is all on set lines, leaving no liberty of initiative either to master or to pupil. Latin is more thoroughly taught than Greek, of which it is rare that anything remains after school time. Modern languages are neglected. Italian literature, history, geography, mathematics, the elements of natural science, and philosophy, are the subjects taken up. The course at the technical schools is also of seven years; the subjects are modern languages, arithmetic, bookkeeping, algebra and geometry, drawing, history, and geography. There are, besides, special schools of decorative design and modelling. We are told that the agricultural, mining, and forest schools have failed completely, as also the sulphur-mining school at Palermo.

There are no games or sports in common at any of the public schools; the boys are very insufficiently trained in gymnastics, of which there are classes twice weekly, but from which they are easily excused on very futile pleas. We have known parents to get a medical certificate so that their boys should not run the risk of catching cold after getting heated by the prescribed exercise. Friendships are not made at school; the boys of good family keep strictly aloof from those of inferior social rank. There is no community of interest among them, so that school life loses much of the purpose it has in England and America, where recreation is part of the scholastic plan. Strolling through the streets after school hours and frequenting the cafés, or a formal walk, are often the sole resources of an Italian boy by way of recreation.

There are as many as twenty-one universities in Italy besides the College of Superior Studies in Florence and the Milan Academy. This is in excess of the requirements of the country, but, as most of them existed when there were separate independent states, the fear of offending local susceptibilities prevents any being suppressed. The university course, the same in all, costs in fees paid in separate instalments from $90 to $170. The result of this cheap higher education is not happy: it fills the liberal professions with men who cannot earn their living in them, and who consider themselves too superior to undertake more useful work. They drift into Government employment, where they have little to do, and, unless specially gifted, have to content themselves with a salary of about $240 or $300 a year. During the university course the young men generally live at home. There is no supervision of study, no enforced discipline; they are not even obliged to attend the lectures provided for them. If any professor is unpopular or severe in exacting their attendance at his lectures, the students have it all in their own hands to organize riots, and scarcely a year passes without some demonstration of this nature; and the students of other universities follow suit to show their solidarity. The only punishment for disorderly conduct is the closing of the University for a fortnight or so; this gives the students a holiday, and they have besides fewer lectures to read up for their examinations. The Minister of Public Instruction has the right to supervene and to suspend the ringleaders for a year, but any authoritative measures cause great discomfort to the Minister, who is tormented by petitions from the relatives of the offenders, or the local Deputy threatens to join the Opposition if he does not revoke the punishment; and if the Minister remains unmoved, at the next Cabinet crisis he is generally ousted. It is this interference of the Ministry of Public Instruction which is so disastrous to the efficiency of the professors, often distinguished men of European reputation, but who are utterly powerless to bring about any material improvement in the system of education. The studies are regulated at the Ministry, the scholastic programme is there decided upon, the teachers are under its control, and the examination papers are made up there. In the course of thirty-two years there have been no less than thirty-four different Ministers of Public Instruction, so that not one has ever had time to bring about any important reform, while changes in details of little value are constantly decreed and soon suppressed by the next man in power. It has often been declared that the post of Minister of Public Instruction should be permanent, not depending on party politics, in order to be in any way efficient. According to our author, this Ministry is overwhelmed with the care of trivial details. Even during his holiday in the country, the Minister is besieged with people requiring favors of him, while if passing through any provincial town, he is under the obligation of receiving the visits daily of the prefect, the Mayor, the head of the carabinieri, and the most important citizens, while if in a village, the local band plays every evening under his windows, unless as a change from this infliction he is serenaded by the children of the elementary schools.

Mr. Villari's chapters on Music, Literature, and Art are not in any way adequate. The illustrations, from instantaneous photographs, are very poor, and the style throughout is careless, continually falling

into slang expressions, which come rather as a shock to the reader when the subject treated of is serious. Notwithstanding these defects, the book will be useful to those who desire to know the life of the Italian people as seen through an Italian medium.

## FYFE'S SUBMARINE WARFARE.

*Submarine Warfare.* By Herbert C. Fyfe. With Introduction by Admiral Sir E. R. Fremantle, R. N., and Sir Edward J. Reed, M. P. London: Grant Richards; New York: E. P. Dutton & Co. 1902.

The problems of aerial and subaqueous navigation have keenly interested men ever since the days of Dædalus and Jonah, who still "hold the record." Although enthusiasts there be who look for achievements greater, both as to time and distance, than those of that spiritless and unhappy prophet, the son of Amittai, Mr. Fyfe, in his interesting book, seems to expect, at least for the present, only such gradual improvements in the mechanism of so-called submarine boats as will render their movements swifter, better controlled, and freer from the chance of internal disaster. That he subconsciously believes they will seriously affect, if not entirely revolutionize naval warfare, is evident on every page. Those who care to learn what has been done in the past to move below the surface of the sea against an enemy and there to blow him into eternity, or who wish to keep in touch with the experiments towards this same beneficent end which are going on the world over, will find in Mr. Fyfe's work pretty much all that is publicly available, and they may be led by the logic of the facts he adduces to share the tempered optimism of his views.

In his Part II., Mr. Fyfe gives an excellent résumé of the history of his subject, beginning with the divers of Tyre in Alexander's siege, who "swam off from the city under water to a great distance, and with long hooks tore to pieces the mole with which the besiegers were endeavoring to block up the harbor." It is a far cry from this episode to the days of Cornelius Drebbel, born in Holland in 1572, for whom the definite claim is first made of successful under-water travelling. The Dictionary of National Biography states that he invented a submarine boat "which was navigable, without the use of artificial light, from Westminster to Greenwich." This story was believed by the famous physicist Boyle, who refers to Drebbel in his 'Spring of the Air' (1662). We hear no more about the subject until the American Revolution, when, proper conditions being realized in offensive coast operations conducted against a determined people of exceptional mechanical ingenuity, submarine warfare according to our modern notions was invented and partially developed by David Bushnell, a native of Saybrook, Connecticut (not Maine, as Mr. Fyfe states), who built in 1775 "the first practical submarine boat, and the first of which any detailed account is extant." In it one Sergeant Ezra Lee, in 1776, made an attempt, which almost succeeded, to blow up the sixty-four-gun ship *Eagle*, while at anchor off Governor's Island. His mode of operation was to dive beneath the water and fix a torpedo to the ship's bottom by means of a screw. The torpedo contained one hundred and fifty pounds of gunpowder, to be exploded, after a certain lapse of time, by clockwork. Bushnell was shortly followed by another American, the celebrated Fulton, who, in 1801, in the harbor of Brest, descended in a plunging boat of his own devising to the depth of twenty-five feet, and there remained for an hour. "Satisfied with the performance of his boat," says Barnes in his 'Submarine Warfare' (New York, 1869), "he next made numerous experiments with his submarine bombs, to which he now gave the name of 'torpedoes,' and baptized the boat *Nautilus.*" As the French Government would neither adopt nor further his schemes, he went to London, and in May, 1804, laid them before the English Ministry. Pitt alone approved; the others scouted the idea, and thought, with Lord St. Vincent, that "Pitt was the greatest fool that ever existed, to encourage a mode of war which they who commanded the seas did not want, and which, if successful, would deprive them of it."

The subject slumbered during the long years of peace that followed the Napoleonic wars, and it awoke only during our own Rebellion, when, for the first time in history, a man-of-war was actually destroyed by a plunging boat; the United States steamer *Housatonic* being blown up in 1864 by a *"David,"* off Charleston Bar. The general unrest which characterized the closing decades of the last century proved exceptionally fertile in warlike inventions, and the submarine boat gained a development which has made it, as Mr. Fyfe says, "no longer an ingenious toy."

A successful plunging boat must possess ability to navigate on the surface for the approach; ability to descend for the attack to any given depth, at will; ability to maintain that depth within very close limits; ability to steer a straight course when either afloat or submerged; habitability for a reasonable length of time in either condition; ability to discharge a Whitehead torpedo without endangering stability or flotation; absolute certainty of returning to the surface when desired; sufficient speed, the more the better; ample range of action; freedom from breakdowns to machinery; freedom from internal accidents; ability to discover and to aim at the target.

We cannot do better than to refer to Mr. Fyfe's book the reader who desires to know how these requirements have been met in the various types of submarine boats which have come so prominently before the public in recent years. There seems to be little doubt that the *Holland* class, named after its American inventor, commands the most confidence, although even this is still open to great improvement, especially in the two last respects just enumerated. Without entering into detail, it may be briefly stated that the present *Holland* is shaped like a cigar, is about fifty-four feet long, and about ten feet in greatest diameter; is driven by a single screw operated by a gasoline engine at the surface, or by an electric motor and storage battery when submerged. The horizontal rudders which move her up or down are so satisfactory in their operation that the desired plane of submersion is maintained within a few inches. Should the engines stop, a small reserve of buoyancy, which may be increased if necessary, brings the boat to the top of the water. Compressed air carried in flasks keeps the atmosphere respirable.

The only serious accidents yet experienced in the *Holland* class are explosions attributed to the hydrogen gas given off by the storage battery. This source of danger can doubtless be eliminated or controlled, leaving the difficulty of seeing as the common and insuperable obstacle to the assured employment of the submarine of all types. Any swimmer knows how hard it is, when in the water, to see beyond a very short distance. Let him put himself inside a four-inch bronze turret, just awash, with narrow slits for peepholes, and then find his enemy on a dark night if he can. Practically, he will stay on the surface and scout for his quarry till discovered; but even then his horizon is greatly narrowed, for a man standing on a raft cannot see very far, especially in gloom or in thick weather. It is difficult to imagine a means by which this fundamental and physical inconvenience can be satisfactorily overcome. Again, the submarine has at present a speed of only seven or eight knots as against her enemy's possible sixteen to twenty. These two limitations indicate the tactical reply to the submarine (masking lights at night, keeping in motion at fair speed, and throwing out lines of picket boats), while they suggest, at the same time, that the best rôle of the submarine will probably be the defence of harbors, and, particularly, keeping a blockading fleet well off shore, and under the continual strain of ceaseless vigilance. "For the purposes of coast defence, the submarine may be said to have fairly established its value," says our author; "the knowledge that such craft were 'in being' would have a deterrent influence upon an admiral attacking a fort or contemplating a blockade, and in all probability the days of close blockade are over."

Further than this it would not be prudent to go with our author in his forecast. To use the submarine in offensive warfare she must be vastly improved in the way of habitability, for she cannot be carried about by larger vessels, as some overzealous partisans suggest. Time was when battleships so carried small torpedo boats for the mêlée of close action. This practice has disappeared with other plans for supplanting the gun, still the unchallenged arbiter of naval battles. That the submarine has its use no one can deny; doubtless its greatest value will be found in allaying public alarm, and permitting good citizens and timorous non-combatants to sleep in peace, secure in the knowledge that a submarine "defends" the port. We are not likely, in our day, to see the battle-ship relegated to a museum, and naval fights reduced to diving contests. Nor need the man behind the gun fear the loss of his prestige until shorn of it in the crucial experiment of actual war.

The conviction that the submarine, however successful, will, at most, have but a restricted field and a minor part in the great operations of future maritime conflicts, receives support from the Annual of the Office of Naval Intelligence, which records impartially the facts and not the theories of the world's naval progress. The current number devotes some three pages in all to submarine boats, out of sixty-five taken up with notes on ships and torpedo-boats in the 500 which comprise the work. Ordnance and armor, on the other hand, absorb no less than 112. The proportion or disproportion may not be significant, but,

at least, it excites comment. As to the French submarine craft, by far the most numerous contingent, the Annual calmly remarks: "While the published accounts always, or nearly always, give unstinted praise and pronounce the experiment a success, the fact remains that details are rarely given, and the success obtained is probably not so great as usually described in the press." It is, by the way, impossible to avoid the suspicion that the vogue of the submarine is to some extent due to its promise to set the poorer and weaker Powers on an equality with their richer and stronger rivals.

Mr. Fyfe's style is simple and pleasing, but the frequent repetitions of fact and opinion which mark his pages suggest that the work itself was made by the hasty collating of several distinct essays. The proof-reading is execrable, especially in the matter of dates; there is no index. The typography is excellent, but the paper is of that highly calendered variety dear to the cheap magazine and wearying to the eye. None the less, we must share Sir E. J. Reed's opinion that this "is a most timely and highly instructive work, and one which gives to the non-technical world an extremely good review of all that has been done in the way of submarine war-vessels, while the technical man into whose hands it may come will be compelled, by its great interest and by its clever record of facts, to read every page of it."

---

*Asiatic Russia.* By George Frederick Wright. In two volumes. McClure, Phillips & Co. 1902.

*The Real Siberia.* By John Foster Fraser. D. Appleton & Co. 1902.

Works on Asiatic Russia are multiplying apace; in fact, the world, including the Russians themselves, is just awakening to the full importance of the subject. Then, too, the Trans-Siberian Railway, which is now open to any one, is so new that foreign passengers still feel a little like explorers whose duty it is to relate their discoveries to their fellowmen. The immense resources and possibilities of the huge regions hitherto so little known are attracting wider and wider attention. There is a demand for good books about them, for we have none too many, especially in English. Mr. Wright has put into his two bulky, though really rather short volumes, a mass of valuable facts, most of them not easily accessible to the average reader. He has given us an excellent succinct account of the geography, history, and general conditions of Asiatic Russia at the present time. Although as a geologist he devotes some little space to scientific topics that will not greatly interest most of his readers, history and politics are not neglected. His description of the exploration and conquest of Siberia is particularly good, and his tone throughout is moderate and sensible.

It is only when we come to the political reflections that we feel inclined to criticise. For some reason or other, very few writers about Russia seem to be able to steer a middle course between apology and denunciation. Mr. Wright is an apologist, which is better than the reverse, but this is the weakest side of his book. In his admiration of courage and success he frequently glosses over unscrupulousness; some of his statements are misleading, usually by their omissions, and occasionally he provokes a smile. For instance, in describing the "Occupation of Turkestan," he declares that, after the seizure of Merv, "without further bloodshed Russia at length, in 1883, reached her natural boundary," but he omits to mention that two years later the Russians, after killing or wounding in battle some 500 Afghans, extended the said boundary. Instead, he goes on to assure us that "the alarm of the English at the advance of Russia towards India in this direction has long since subsided, in view of the evident good faith with which the Russians are applying themselves to the development of the country and to the maintenance of peace upon the border."

This conclusion is rather steep. Still more so is the remark that the despotic power of the *mir*, or peasant community, to banish to Siberia its objectionable or burdensome members "is scarcely distinguishable in principle from the increasing exercise of 'local option' which is characteristic of so many American communities." It is also strange to find an American maintaining that "it augurs well for the Siberian part of Russia that it is not open to indiscriminate immigration, but that it has been reserved for the natural increase of the indigenous population and for Russian emigrants. In this way a unity can be preserved." And he supports this proposition by pointing out the decline in the birthrate in the United States since (or, as he seems to believe, because of) the large immigration of the last half-century. When speaking of the pastoral Khirghiz, whose situation is unquestionably becoming worse as time goes on, Mr. Wright, while admitting that, in the Government of Turgai between 1882 and 1896, "there has been a diminution of 355,000 horses, 60,000 cattle, 60,000 camels, and about 700,000 sheep," cheerfully adds: "But as the horses and camels, above a certain number, are nonproductive, their diminution is a sign of prosperity rather than the contrary." How about the cattle and the sheep? Finally, the statement that "in many respects Russia is the most tolerant of all governments," though it is often made by Russians themselves, shows an extraordinary delusion on their part, and is absurd in the mouth of an Anglo-Saxon.

There are a number of other dicta of this sort that we might criticise, but they do not seriously lessen the value of a work which can, after all, be recommended to the public as in the main really sound and full of useful information.

Mr. Fraser's 'The Real Siberia' is less ambitious. Starting out loaded with the usual English prejudice, as he freely admits, and innocent of any knowledge of the country he was to visit, the author journeyed to the Pacific and back. He has now written a book to enlighten those of his countrymen who remain in his previous state of ignorance. His volume has no pretensions to be anything more than a mere sketch of travel and observation, but it reads pleasantly, and its general tone is characterized by cheery common-sense. What Mr. Fraser gets at second hand is less trustworthy. His worst slip is the statement that "in Western Siberia a grant of some thirty-two English square miles is made to every man, and in some cases there is an additional grant of six miles of forests." If the writer had said acres in both cases instead of miles, he would have been not far from the truth.

*One Thousand American Fungi:* How to Select and Cook the Edible; How to Distinguish and Avoid the Poisonous. By Charles McIlvaine, assisted by Robert K. Macadam. Indianapolis: The Bowen-Merrill Company. 1902.

This substantial quarto of 704 pages is frankly written by an amateur for amateurs, and must be judged accordingly. It is not in any way intended to rival such monographs as those by Prof. W. G. Farlow of Harvard or by Prof. Charles H. Peck, the New York State Botanist. Of course, Mr. McIlvaine has borrowed freely from Professor Peck's reports on the Boletus, and other similar treatises, but he has attempted to present the matter in highly popular form.

As a book for amateurs Mr. McIlvaine's at once comes into competition with four others: 'Edible Toadstools and Mushrooms,' by the late W. Hamilton Gibson (Harper & Bros.); 'Among the Mushrooms,' by Ellen M. Dallas and Caroline A. Burgin (Philadelphia: Drexel Biddle); 'The Mushroom Book,' by Nina L. Marshall (Doubleday, Page & Co.); and 'Studies of American Fungi,' by Prof. George Francis Atkinson of Cornell (Ithaca: Andrus & Church). Of these Mr. Gibson's is unquestionably the most beautiful, but it is so scrappy and incomplete that it is of little value to the mushroom hunter. The exquisite illustrations have started more than one person afield, fired with mycologic zeal, but in a few days the enthusiast learns that Mr. Gibson did little more than get up a pretty picture-book. Then, too, the price places it beyond the reach of many. 'Among the Mushrooms' contains some good reproductions of photographs and some fair color prints, but otherwise it is nearly useless. The mushrooms are classified according to color rather than according to structure; an arrangement that can appeal only to the most superficial observer. 'The Mushroom Book,' like all the nature books published by Doubleday, Page & Co., is finely illustrated. The photographs give the most minute detail, and the color prints are extraordinarily vivid and accurate. Miss Marshall usually describes at least one variety under each genus, and of the commoner genera more than one. A considerable number of her descriptions, however, are too vague to serve as guides, and her book as a whole is exasperatingly incomplete. A man may in an afternoon in the woods find three or four of the Lactarius quite as interesting and important as the two which she mentions. Indeed, the Lactarius Deliciosus, the most valuable of the family for the table, she omits entirely; and so on throughout the work. Professor Atkinson's 'Studies,' which costs the same price as 'The Mushroom Book,' is indubitably superior in every respect but one, the number of colored plates. The 'Studies' contains but six, 'The Mushroom Book' twenty-four. The difference is almost made up by Professor Atkinson's many half-tone reproductions of perfect photographs. He describes many more varieties than Miss

Marshall, and his descriptions are in the main more detailed. Any one who has both books will find himself relying chiefly on Professor Atkinson's and supplementing it by an occasional reference to a colored plate in Miss Marshall's. For example, Professor Atkinson describes thirteen species of the Lactarius as against Miss Marshall's two. Nevertheless, his book is far from complete, as the mushroom collector will discover the first day he uses it. If the author would fill in the gaps, add twenty or thirty colored plates, and issue a second edition at the same price, he would win the gratitude of every amateur and professional mycologist in the country.

The chief merit of Mr. McIlvaine's book, to return to the one before us, is its completeness. He identifies about a thousand species—roughly speaking, three times as many as Atkinson. A comparison of the number of species distinguished under several common genera by the three writers may be of interest.

| | Marshall. | Atkinson. | McIlvaine. |
|---|---|---|---|
| Agaricus | 9 | 13 | 23 |
| Amanita | 5 | 16 | 29 |
| Boletus | 20 | 17 | 125 |
| Cortinarius | 2 | 4 | 23 |
| Hydnum | 8 | 9 | 20 |
| Lactarius | 2 | 13 | 34 |
| Lepiota | 3 | 9 | 25 |
| Mycena | 1 | 10 | 7 |
| Pleurotus | 3 | 9 | 16 |
| Polyporus | 9 | 11 | 22 |
| Russula | 3 | 8 | 45 |

The figures in the table hardly do justice to Professor Atkinson, for what descriptions he gives generally excel in clearness and accuracy. One trouble with Mr. McIlvaine is that he identifies almost too many species. He is often inclined to class as separate species what Professor Atkinson would regard as minor variations in the form of one species. The result is that the reader is puzzled to distinguish small differences and is sometimes hindered rather than helped. On the whole, however, in spite of possible confusions and inaccuracies, Mr. McIlvaine's book must enable the student to identify many species that are not even mentioned in the other four books.

The work contains thirty-two colored plates, but, as they are reproductions of water-color sketches, they are less accurate and detailed than the colored plates offered by Miss Marshall and Professor Atkinson. The half-tones from photographs are entirely satisfactory. The size and weight of the book, and the price, must give the average purchaser pause. What the mushroom hunter needs is a book with Miss Marshall's colored plates, Professor Atkinson's half-tones, the completeness that Mr. McIlvaine attempts, and Professor Atkinson's lucidity and exactness. There are rumors of a *magnum opus* by Professor Farlow to fill all these wants, but in the meantime the waiting world ought to buy many copies of something less pretentious.

---

*Outlines of Criminal Law.—A Selection of Cases Illustrative of English Criminal Law.* By Courtney Stanhope Kenny. Two volumes. Cambridge (Eng.): University Press; New York: Macmillan. 1902.

The author of these volumes justifies their appearance by the fact that he has lectured on criminal law at Cambridge for a quarter of a century—"a period long enough to afford even the least competent lecturer some opportunity of ascertaining what principles, and what illustrations, are so successful in arresting the attention and impressing the memory of students as to be worth putting before them in the earliest manual which they peruse." A brief examination will convince the reader that no excuse was necessary for these publications. It is difficult to imagine a more perfect expository style than that of the lectures, and the fine distinctions which the nature of the subject requires are made with admirable clearness. When a lecturer brings such qualifications to his task it is not surprising that he should find, as Mr. Kenny has done, that law students regard criminal law as one of the most attractive portions of their work. Presumptively, these lectures are meant for those who take up the law as a profession; but they will be useful to many older men when called on to discharge the duties of a justice of the peace. While our law has diverged from that of England, the principles of the two systems remain substantially the same, and the procedure is in most respects similar. For this, and for other reasons, these lectures will be found invaluable by American readers.

With nearly fifty bodies constantly engaged in law-making, we cannot expect to approach the comparatively symmetrical development of criminal law attained in England. It is true that Parliament has not yet been induced to codify this law, but many useful statutes have been passed, and the judges have exerted a steady pressure in the direction of improvement. In some of our States, procedure compares favorably with that of England, but in most of them it is decidedly inferior. This is partly due to our practice of electing judges, which fills the bench with politicians, and partly to the incessant changes caused by the *cacoethes legiferendi*. We are inclined however, to attribute much importance to the fact that the right of the citizen to prosecute criminally, at least in the case of graver offences, has been practically abolished in this country. This right is vested in the functionary generally known as the District Attorney, and he exercises it, in the larger cities, at his pleasure. The prosecution of criminals having ceased to be a part of the occupation of the general practitioner, their defence has also passed out of his hands. In such a city as New York few lawyers know anything of criminal law, and those who are familiar with it have a *clientèle* largely, if not exclusively, composed of criminals. The results have been prejudicial, not only to procedure, but also to the law itself; and the plight of an innocent person accused of crime and obliged to employ a "Tombs-lawyer" for his defence is certainly deplorable.

This is not the place to enumerate the particulars in which the Criminal Law has been improved, or to consider those in which it is susceptible of improvement, tempting as such a review is made by Mr. Kenny's exposition. We can mention only the prevalent theory concerning exemption from responsibility caused by insanity. "Within a century," Mr. Kenny tells us, "so eminent a statesman as Windham could urge in Parliament the view that even the most insane criminal ought to be hanged for his crime 'for example's sake.'" But this was never the law, nor, on the other hand, has the mere existence of insanity sufficed for exemption. Not very long ago medical experts inclined to take this view; but observation appears to have established the fact that many insane persons are influenced by the fear of punishment. Hence English law now distinguishes two classes of insane persons—those who are not affected by the terrors of the law, and those who, as Lord Bramwell said, "would not have yielded to their insanity if a policeman had been at their elbow." In this country, "irresistible impulse" is recognized as a defence; but the English courts hesitate to admit it. Nor does their law seem to regard insanity as a circumstance that may mitigate punishment, although in practice it is often so treated. Much the same may be said of drunkenness.

The 'Select Cases' constitute an admirable repertory of criminal law. Few of them are taken from our reports, and many of them are of high antiquity. We must complain that they are sometimes enigmatical, in not stating whether the trial resulted in conviction or acquittal. They may be described, as the Scotchman did the definitions in the dictionary, as "Bra' stories, but unco' short"; nevertheless, it is a relief to escape from the frightful verbosity which is the besetting sin of our judges. Taken together, these volumes constitute a *corpus juris* of which the English people may well be proud. Our lawyers, and especially our judges, should welcome them; and they deserve the attention of all who care to understand our institutions.

---

*Madame de Pompadour.* By H. Noel Williams. Charles Scribner's Sons. 1902.

This volume proves the continuance of interest that pertains to a century in which the direct action of women on the principal affairs or relations of life has become a commonplace for historical remark. Few commentators, however, add the obvious note that during that very time (especially in France) the rights and legal status of the sex obtained a minimum of recognition. It is one of the principal objects of Mr. Williams's voluminous study to show how, by dint of natural ability, sheer feminine persistence, and unscrupulous use of any effective means, a king's favorite—herself a *bourgeoise*—succeeded in imposing her will on the most uncompromisingly aristocratic society of her time, and, through want of genuine administrative capacity, hastened the break-up of the very conditions that she sought to control single-handed.

The story has become familiar from often telling; it is excellently summed up in Mr. Perkins's 'France under Louis XV.,' in the following decisive words: "A history of her rule would be properly entitled France under Mme. de Pompadour. . . . She had the ambition of a Catharine II. without her intellect." To the severity of this historical judgment, from which there is now no admissible appeal, Mr. Williams would attach a set of considerations, not by way of posthumous exculpation, but in the interest of serene impartiality. His own discussion of the political rôle of Jeanne Poisson is as uncompromising an arraignment as an enemy could wish; though, it must be said, there is yet ample room in his treatise for adequate attention to the fever of megalomania which misled an unscrupulous woman into the belief that her judgment of situations and suitable men was sound. Both her dismissals and her appointments, as Mr. Williams admits, were

urged by private considerations or enmities, and all in view of advancing her favorites. Her proscription or exclusion lists contain the names of the only men able to cope with the problems of government, foreign policy, or war. Her pet general was routed at Rossbach. Her ignorance of colonial affairs cost France, on our side of the Atlantic, the influence which neither language, nor race feeling, nor religious earnestness has yet succeeded in reinstating. This collective (but now somewhat banal) charge might find some palliation if Mr. Williams, or any one else, could show under this mass of bungling the motive of affection for either her royal lover or the common country of both. Through a discreet footnote (p. 366) we discover that even in these natural impulses her present biographer believes her to have been wanting. We find, as an offset to this, several chapters devoted to the generally neglected credit side of La Pompadour's account with posterity. It amounts, in brief, to assistance given to a few men of letters and artists, to encouragement of the porcelain-workers at Sèvres, to the foundation of the École Militaire, and to unfailing generosity towards those she liked because they worked her will.

In the above summary, we have not pointed out the range of Mr. Williams's studies, which, with the help of a page of bibliography, he might have spared his readers the labor of verifying in his numerous footnotes. It may be observed, however, that the weight of his attention seems to have been directed chiefly to the writers of detail in history, such as the Goncourts, whose well-known interest in the minutiæ of documentation so often obscures the breadth of view essential to great historical writing. As a countervailing result, many pages in this work present for the first time to English readers, in extremely attractive form, several episodes of picturesque, if secondary, character. The accounts of Madame de Pompadour's theatrical undertakings and of Latude's escapades and impostures are given in spirited fashion. The French quotations show careful revision; not so the words and phrases casually introduced. When Madame de Pompadour tacitly consented to, or even assisted, the infamies of the Parc aux Cerfs, she did not play the part of an "entremetteur" (p. 208); and the *haute monde* (p. 286) of Paris never existed outside of an English book. The volume, however, is eminently readable, and will doubtless further recommend itself to libraries, public or private, by the beauty of its form and its excellently selected illustrations.

---

*European and Japanese Gardens.* Philadelphia: Henry T. Coates & Co. 1902. Pp. 162, ill., $1.50.

We have here a series of papers recently read before the American Institute of Architects. Of late years the literature of garden design has grown apace, but its growth has included no book of moderate cost which offers so many views of important examples as does the one whose title we record above. The pictures are well chosen and include plans of many celebrated gardens. The text is by sundry writers. Prof. A. D. F. Hamlin of Columbia College gives an account of the origin and development of the Italian garden. The spirit that animated the men of the Renaissance in the making of their gardens, the genius of their style, the response of their designs to their manners, customs, traditions, climate, and to the spirit of their times—is brought out with the utmost clearness. So complete a picture of the garden in Italy is presented that we come away from it fully prepared to follow its influence beyond the Alps. In his paper on French gardening, Mr. John Galen Howard tells how the art of Italy, in its new home, became a thing far different from its prototype. So commanding a genius was its acknowledged master, André Le Nôtre, that in any study of French gardening his work must fill a large space, and to this rule Mr. Howard's essay offers no exception. For him Le Nôtre is the Shakspere of gardening, whose work deserves and receives his most sympathetic study and enthusiastic praise. English Gardens, as seen by Mr. R. Clipston Sturgis, present an entire contrast to such vast conceptions as Versailles and Fontainbleau. For him the chief interest of gardening in England centres about the simpler work, the smaller and less pretentious gardens seeming in every way the more perfect. He attempts no account of English gardening as a whole, either historical or descriptive, but dwells upon some of its distinguishing characteristics, such as the desire for privacy and separation, the division of the grounds according to their use, the high standard so general in maintenance. His love of the simple and homely in English gardens and of the reasonableness of their arrangement comes from a knowledge of the subject to be gained only from the gardens themselves. The brief notes that accompany the excellent views of Japanese gardens are by K. Honda, who describes the Hill and Flat gardens in the finished, rough and intermediate styles, and gives an account of the accessories proper to the several sorts of Japanese garden.

The papers, in spite of their diverse origin, hang together well. The book is worth having, not only on account of its beautiful illustrations, but because it treats its subjects sanely and intelligently.

## MALLET DU PAN
### And the French Revolution

By BERNARD MALLET. With Portrait. 8vo. $5.00

It will be sufficient, in this place, to refer to the emphatic testimony of authorities like Carlyle, Sainte-Beuve and Taine to the position of this once celebrated political writer as a pioneer of modern journalism, as a champion of constitutional Monarchy in the Revolution, as a confidential adviser of Louis XVI. and of the Allied Courts.....His story has, indeed, as a study of character, a deep human interest, the interest attaching to a consistent and courageous struggle against overwhelming odds. But it is as a study of opinions, as a record and analysis of political thought and action, that an account of Mallet du Pan has its main value.

## The Story of Athens

By

HOWARD CROSBY BUTLER, A.M.

**Lecturer on Architecture at Princeton.**

This is an important work on an important subject, being a record of life and art in "The City of the Violet Crown." It begins with the founding of the city and traces its rise and fall through each successive "age."

The author has repeopled Athens of old and presented a picture of the living. The copious illustrations were made by the author for a better understanding of the text, making the book not only entertaining, but serving a useful purpose. It throws many side lights on a well studied subject.

*For Sale by all Booksellers. Send for Catalogue.*

**Oxford University Press,**

AMERICAN BRANCH,

91 & 93 Fifth Avenue, New York.

# *Charles Scribner's Sons Publish This Week:*

*The most important contribution of many years to the literature of Exploration and Discovery in America*

## UNKNOWN MEXICO

**A record of five years' exploration among the tribes of the western Sierra Madre; in the Tierra Caliente of Tepic and Jalisco and among the Tarrascos of Michoacan**

**By CARL LUMHOLTZ, M.A.**

**Member of the Royal Society of Science of Norway, author of "Among Cannibals," etc.**

In two elaborate volumes of 900 pages, illustrated with 250 photographs taken by Dr. Lumholtz, together with 15 plates lithographed in full color, and three maps. Large 8vo, $12.00 *net* (expressage additional).

*An elaborate book about New York*

## New York Sketches

By JESSE LYNCH WILLIAMS

With many illustrations by Henry McCarter, Jules Guerin, Everett Shinn, and others.

"This is the great modern city in its full tide."

$2.00 *net*. (Postage 11 cents.)

*A new and sumptuous edition*

## Italian Cities

By E. H. and E. W. BLASHFIELD

With 48 full-page illustrations in tint from photographs.

"Contains the sanest, most catholic, and most conclusive art criticism of recent times."—*Atlantic*.

Two volumes. $5.00 *net*.

### *PREVIOUSLY PUBLISHED*

### The Private Soldier Under Washington

By Charles Knowles Bolton, Librarian of the Boston Athenæum. Fully illustrated from original sources.

$1.25 *net*. (Postage 18 cents.)

Contents: I. Origin of the Army.—II. Maintaining the Forces.—III. Material Needs.—IV. Firelock and Powder.—V. Officer and Private.—VI. Camp Duties.—VII. Camp Diversions.—VIII. Hospital and Prison Ships.—IX. The Army in Motion.—X. The Private Himself.

*A BRILLIANT STORY*

### Vive l'Empereur

By Mary Ramond Shipman Andrews. Illustrated in color by F. C. Yohn, $1.00.

The historical side of this story is a suggestion from some half-told Napoleonic legend. It is a most stirring love-story and in addition is full of amusing character and incident. The most of the action takes place in an old castle on the Irish coast. A son of Marshal Ney is the young lover in the tale.

### New Amsterdam and Its People:

*STUDIES SOCIAL AND TOPOGRAPHICAL OF THE TOWN UNDER DUTCH AND EARLY ENGLISH RULE*

By J. H. Innes. With maps and plans, and with many views, portraits, etc.

Large 8vo, $2.50 *net*. (Postage 16 cts.)

### A Nonsense Anthology

Edited by Carolyn Wells, author of "The Jingle Book," etc., $1.25 *net*. (Postage 11 cts.)

The first adequate anthology ever attempted. The Kings of Nonsense, English and American, are represented by extensive quotations of their most delectable achievements, and not only they, but the lesser lights as well, so that this volume stands for all that is representative and delightful and best in this mad-cap department of humor. An amusing analysis of nonsense, as an introduction, greatly assists the reader's appreciation.

### Mountaineering in the Sierra Nevada

By Clarence King. With Maps. 12mo, $1.50.

A new edition of a unique book. The late Clarence King was not only an eminent geologist but a writer of real and romantic genius, and this, his most important literary work, which has been long out of print, is remarkable for its general human and artistic interest, as well as for its value as a record of scientific exploration. It is a classic of humor, of romantic adventure, of nature descriptions rivalling Ruskin in vividness and power.

Rockland St. 1902

## Houghton, Mifflin & Company's New Publications

### Roger Wolcott By Bishop Lawrence

This is one of those attractive works that spring out of life-long friendship. It presents the career of one of the most patriotic public servants, the late Governor of Massachusetts, and deserves a high place among recent biographies. Illustrated, $1.00 net; postage extra.

### Literary Values By John Burroughs

A group of notable essays presenting Mr. Burroughs's views on literature and life. They are so sound, so vital, so just in judgment, that the book is a distinct contribution to criticism and to literature. $1.10 net; postage extra.

### Handbook of Birds of the Western United States

By Florence Merriam Bailey. With 33 full-page plates from drawings by Louis Agassiz Fuertes, and over 600 text illustrations. A book which does for the West what Mr. Chapman's Handbook does for the East. $3.50 net; postage 19 cents.

### A Study of Prose Fiction

By Bliss Perry, editor of *The Atlantic Monthly*. In a series of clearly arranged essays Mr. Perry presents the more important phases of prose fiction as a literary form. The book will appeal to all lovers of the pleasant art of story-writing. 12mo, $1.25 net. Postpaid.

## PAGE'S BOOKS FOR YOUNG PEOPLE

## BEAUTIFUL JOE'S PARADISE:

**or, The Island of Brotherly Love**

*A Sequel to "Beautiful Joe."*

BY

**MARSHALL SAUNDERS.**

With 15 full page plates, and many decorations from drawings by

**CHARLES LIVINGSTON BULL.**

***Price $1.20 net.***

(postage $1.32)

"'THE ISLAND OF BROTHERLY LOVE' proves to be a place as interesting as 'Alice in Wonderland,' and as the story is told in the words of a healthy and remarkably real boy, there is no unwholesome sentimentality or mysticism in it. Yet the whole thing is quite a daring flight of fancy, ingenious and original, and, best of all, interesting to children, and even to older readers. . . . Miss Saunders has put life, humor, action and tenderness into her story. The book is sure to be one of the most popular books of the fall and winter season."—*Chicago Record-Herald.*

## The Little Colonel's Hero

**By ANNIE FELLOWS JOHNSTON**

Author of "The Little Colonel's House Party," "The Little Colonel's Holidays," etc. With eight illustrations by E. B. BARRY. Price, $1.20 *net* (postpaid $1.32).

In this volume Mrs. Johnston takes the "Little Colonel" abroad, and her experiences and adventures in the Old World are just as interesting and delightful as at Locust.

## The Sand Man: His Farm Stories

**By WILLIAM J. HOPKINS**

Illustrated. Price, $1.20 *net* (postpaid $1.38).

"An amusing, original book, written for the benefit of children not more than six years old, is 'The Sand Man: His Farm Stories.' . . . It should be one of the most popular of the year's books for reading to small children."—*Buffalo Express.*

"Mothers and fathers and kind elder sisters who take the little ones to bed and rack their brains for stories will find this book a treasure."—*Cleveland Leader.*

*For sale by all booksellers, or sent postpaid on receipt of the price, by the Publishers,*

**L. C. PAGE & COMPANY, Boston, Mass.**

*For Sale by all booksellers. Send for catalogue.*

## OXFORD UNIVERSITY PRESS, American Branch,

91 AND 93 FIFTH AVENUE, NEW YORK CITY.

# LONGMANS, GREEN, & CO.'S NEW BOOKS

## Charlotte Brontë, George Eliot, Jane Austen

Studies in Their Works. By Henry H. Bonnell. 8vo, 486 pages. *Net* $2.00. By mail, $2.17.

I. Charlotte Brontë, (a) Her Realism, (b) Her Attitude towards Nature, (c) Her Passion.

II. George Eliot, (a) Her Reljgion and Philosophy, (b) Her Art, (c) Her Sympathy: Further Considered.

III. Jane Austen, (a) Her Place, (b) Her Wonderful Charm.

## The Composition of the Hexateuch

An Introduction, with Select Lists of Words and Phrases. By J. Estlin Carpenter, M. A. And an Appendix on Laws and Institutions. By George Harford, M. A. 8vo, cloth, $6.00 net. Postage or expressage extra.

The Introduction to the Hexateuch and the Documentary Lists of Words contained in this volume were originally prepared to precede the arrangement of the text undertaken by a Committee of the Society of Historical Theology at Oxford, and issued under the title "The Hexateuch according to the Revised Version." 2 vols., 4to, 1900.

*New Book by Canon Newbolt.*

## Priestly Blemishes;

**Or, Some Secret Hindrances to the Realization of Priestly Ideals. A Sequel. Being a Second Course of Practical Lectures Delivered in St. Paul's Cathedral to "Our Society" and Other Clergy in Lent, 1902.**

By the Rev. W. C. E. Newbolt, M.A., Canon and Chancellor of St. Paul's Cathedral. Crown 8vo, $1.25.

## The Thousand Eugenias

By Mrs. A. Sidgwick, author of "Cynthia's Way," etc. Crown 8vo, cloth, $1.50.

The plot is woven round the possessors of certain shares in the Eugenia mine, and is of a dramatic and exciting character. This story, which fills considerably more than half the book, is followed by several shorter sketches, entitled "Anne and the Anarchist," "The Last Straw," "Aunt Thomasina," "An Iconoclast," "Wall-papers," etc.

*By RICHARD BAGOT.*

## Donna Diana

By Richard Bagot, Author of "Casting of Nets," "A Roman Mystery," etc. Crown 8vo, cloth, gilt top, $1.50.

Mr. Richard Bagot has followed the "Casting of Nets" and "A Roman Mystery" with another study of the complicated social and religious intrigues which characterize certain circles of Rome. The plot of "Donna Diana" turns on the struggle between a young Englishman who wishes to marry the heroine, and her relatives, who desire to see her take the veil. Mr. Bagot describes the domestic and social life of Rome with care and detail.

*By ANDREW LANG.*

## The Disentanglers

By Andrew Lang. With 7 Full-page Illustrations by H. J. Ford. Crown 8vo, $1.50.

"In 'The Disentanglers' the author has sought to combine humor and fantasy with a satire of contemporary society. . . . Two ingenious young Englishmen . . . set up an agency for the benefit of families, one member of which seems to be in danger of making an undesirable marriage. In the series of strange cases which these practitioners of a new profession were called upon to settle there is both unity of theme and variety of humorous adventure."

## LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

# The Nation.

NEW YORK, THURSDAY, NOVEMBER 27, 1902.

## The Week.

"Cruelties were committed here and there," said President Roosevelt on November 19, at Memphis, in his glorification of the Philippine war. Almost while he was speaking, the shame-faced War Department was admitting one flagrant case of torture by men wearing the American uniform, which it had hitherto indignantly denied. The killing of a Catholic priest, under exquisite torture, by Capt. Brownell is now "frankly" conceded by that gentleman and soldier. He omitted to report the occurrence, since it was really so trivial. This is triumphantly adduced as a complete justification of Secretary Root. If his subordinates do not report their misdeeds, how on earth can he find them out? His warrant for asserting that the cruelties charged were never committed is thus seen to be official ignorance—and how extensive a basis that may be, the full proof of the murder of Father Augustine now makes clear. How does he know that there have not been dozens of similar cases? Mr. Roosevelt affirms that "the wrongdoing has been completely stopped." How does he know that other Captain Brownells are not killing natives by torture, and forgetting to report the trifling incident? This crushing exposure, for which the thanks of the country are due to Messrs. Schurz, Charles Francis Adams, and other Anti-Imperialists, shows that there is at least something rotten in the system of army intelligence. With this frightful case of ignorance of what has been going on in the army brought home to him, Secretary Root ought to be more chary about certifying officially to the "unexampled humanity" of our troops in the Philippines.

---

The latest dispatches from the Philippines tell us that the continued fall of silver has paralyzed business and caused an unexampled crisis in the financial administration of the islands. Ten days ago, $2.50 of silver would buy one dollar of gold. Now $2.60 is required, and the prospect is that there will be further decline in the value of the white metal before the end of the present week. The situation could hardly be worse, but it can be no better until Congress adopts positive legislation and gives the islands a better currency. The principal cause of the decline of silver during the past six months has been the exportation of that metal from China to India to buy sterling exchange for the payment of the periodical war indemnity of the former country. On account of the disarrangement of trade due to the "Boxer" rebellion, it became impossible for the Government to obtain bills on London from mercantile sources in sufficient amounts to meet the payments. Thus it became necessary to call on the mandarins of the provinces for fixed sums of money in silver dollars, which were converted into bullion and shipped to Calcutta. The latter is still the principal consuming market in the world, for, although silver is no longer coined in India for private individuals, it is still in large demand for purposes of ornament and the arts, and is still bought by the Government for coinage into rupees as a currency subsidiary to gold. These purchases from China have lessened the demand for silver in London by no less than £1,300,000, as compared with the corresponding period in 1901. The latest drop in the price of silver seems to have been due to a movement for the adoption of the gold standard in the Straits Settlements.

---

It seems impossible for Congress to avoid legislation on the subject of the currency in the Philippines. The present difficulty is greater than that which confronted us during the last session, because the decline of silver is greater, but it is not insurmountable. The plan proposed by the Conant Commission is still practicable. That plan contemplated that there should be a Philippine silver coin corresponding in size to the five-franc piece, which should be coined on Government account only, and be legal tender for fifty cents in the gold money of the United States; that this coin should be divided into one hundred parts, called centavos, so that the smallest coin should be equal to one-half cent of our money; that the silver and other subsidiary coins should be kept at par with gold by limiting their quantity and also by redeeming them in gold on demand—the redemption fund to be constituted out of the seigniorage derived from the coinage of silver bullion. Contracts previously existing would be settled on the previous basis, and the Mexican silver dollar now in use would continue to be legal tender until a specified date. Although valuable time has been lost, it is not too late to carry this reform into effect. The price of silver declined 34d. per ounce during the twenty years in which the discussion was going on for the reform of the currency of India. The decline since that time has been only 13d. per ounce. The same degree of intelligence which served India when the reform was forced upon her Government, will be available and alike successful in the Philippines if Congress takes up the subject in the proper spirit.

---

The letter of President Ramsey of the Wabash Railroad, published in connection with an increase of 10 per cent. in the wages of his employees, directs renewed attention to the very remarkable movement of the past fortnight in this direction. On November 13 the Pennsylvania published the announcement of an all-around 10 per cent. increase in wages on its Eastern lines. This was followed within two or three days by similar announcements for the Pennsylvania's Western lines, for the New York Central, the Lake Shore, the Erie, the Reading, the Wabash, and other companies. Most of the railways in the further West have already made similar wage advances; so that it may be said that within a very brief period the scale of payment for railway labor has been advanced throughout the country. This recent sudden movement, which follows other general advances—mostly made, we believe, during 1900—has two sufficiently obvious explanations. It is a recognition of the present higher cost of living and of larger industrial profits, but it is also recognition of the fact that, in its present mood, labor's demands must be granted in whole or in part. There has been trouble very lately with the laborers on several of the great Southwestern systems; traffic was delayed, and for a week or two railway managers were greatly disturbed over the prospect. The coal-strike episode, and the aggressive attitude of unionism in the city trades, did not reassure them. With business offered now in excess of facilities for transportation, and with still heavier traffic in view when the full crop movement is under way, it is not surprising that railway-wage advances should have been granted in all directions, even before the pressure of demand had become really urgent. But there are other valid reasons for better wages for the railway hands. The railways have been prosperous, during the past year, to an unexampled degree. In spite of the failure of last year's corn crop, earnings from traffic have continued to increase; the net receipts of 100 American railroads, during the first eight months of 1902, footing up $8,500,000 more than in the same period last year, and $55,000,000 more than in 1899—a gain of no less than 45 per cent. A great number of the companies have increased their dividends; others have made indirect payments to shareholders through issue of new stock at prices far below the market.

---

The housesmiths, the plumbers, the roofers, and a number of other members of the building trades refuse to work in Mr. George W. Vanderbilt's house because his contractor is likely to employ one painters' union rather than another. Not one member of the boycotted

Brotherhood of Painters has yet entered the building, and the general strike is ordered in behalf of the Amalgamated Painters' Society, which also has had no part in the work. But the contractor, as the song has it, is "an intimate friend of an intimate friend" of the wrong union; that makes his work "unfair," and the strike will follow him wherever he builds. It is interesting to recall the reason why the Building Trades Council is using the general strike to exalt one union and destroy another. The Amalgamated Painters' Society, about a year ago, struck for increased wages. The Brotherhood of Painters were willing to work at the old scale and filled the places of the strikers. It was not a case of "scab" labor against a union, but of two unions differing on a point of general policy. Apparently, the rule of unionism is one for all and all for the one that makes the highest demands, for the Brotherhood of Painters, which plain people will think acted within its rights, has been constantly attacked. Some two months ago, for example, the redecorating of the White House was delayed because of this quarrel, and now a large number of workmen in other trades than painting are suffering present loss of wages on account of what might be called a "future-perfect" contest between two kinds of organized painters. This is not quite a literal fulfilment of Mr. Gompers's gloomy prediction that the unions must mend their ways or they would be fighting each other in the streets, but it does show that there are as many degrees of "unfairness" as there were of Touchstone's lie.

---

Vice-Chancellor Stevenson's preliminary injunction, granted in New Jersey against the so-called Prudential-Fidelity merger, brings to at least a temporary halt one of the most remarkable plans in the whole recent movement of corporate combination. This style of merger, would, in fact, go considerably further, in the way of perpetuating present controlling managaments, even than the Northern Securities or Steel Corporation experiments. Mr. Morgan outlined, last spring, the theory of these two last-named combinations; it was, to create for the amalgamated company a capital so large that no outside interest could afford to buy up control. The Prudential-Fidelity combination would make change in control impossible, even were capital available sufficient to pay two or three times over for the capitalized value of the companies. Briefly stated, the situation is that two joint-stock companies exist, controlled at present by the same interest—the Prudential Insurance and the Fidelity Trust. Under the proposed plan, the capital of the Fidelity Trust is doubled, the new shares being bought chiefly by the Prudential Insurance Company. With the money obtained by this sale of stock the Fidelity undertakes to buy a one-half interest in the entire stock of the Prudential. The circular of the Prudential's president, announcing the plan, observed:

> "While by this arrangement the Prudential Company will control the Fidelity, and, on the other hand, the Fidelity will own a majority of the capital stock of the Prudential, . . . the Prudential will forever be the dominant factor, as, of course, it should be. . . . The consummation of this arrangement insures the continuance of the present management of the Prudential."

This it unquestionably does; for the Fidelity Trust's majority stock would always be voted by the present Prudential management, and, in turn, the majority stock of the Prudential would always be voted by the Fidelity.

---

We are fully aware of the feeling among managers of corporations which has encouraged many of these self-perpetuating contrivances. With enormous amounts of loose capital in the hands of rival bankers, no board of management has felt secure in its seat. The ousting of the Louisville and Nashville's conservative controlling interest by a ring of stockjobbers, using borrowed money, has frightened existing managements throughout the country. But every protective scheme contrived to exclude the dangerous outsider from control will apply with equal facility, in a conceivable case, to prevent removal of an objectionable "insider." On this point, Insurance Commissioner Cutting of Massachusetts, replying to the Prudential directors, says very pertinently:

> "The minority stockholders would have absolutely no chance of winning individual stockholders to their side to make a majority, no matter how convincing their arguments, no matter how bad the mismanagement or corruption, or how unworthy the managers so long as they steered clear of indictable offences."

There is in all this no reflection upon existing managements; but existing managements are made up of human beings who are mortal, who, under the scheme proposed, would name their own successors, and who might make grave mistakes in such selection. We freely admit the dangers created by the free-booting capitalists of the Stock Exchange; but we regard the remedy proposed as infinitely more dangerous than the disease.

---

Raising State revenues by means of indirect taxation is evidently to become popular in many States. Wisconsin is sure, under the lead of Gov. La Follette, to revise its tax laws this year, with a view to shifting a larger share of the burden of taxation to the shoulders of corporations. And now the matter is being considered in Illinois, where a movement, centring in Chicago, is on foot which seems likely to result in the holding of a Constitutional convention for the express purpose of empowering the Legislature to abolish the direct tax altogether, and establish a system of corporation taxation sufficient to provide all the necessary revenues for the support of the State government. An interesting feature of the movement in Illinois is that it carries with it an avowed advocacy of the principle of local option in taxation. In fact, this is the principal argument which is being used in Chicago in favor of holding the convention. It is urged that, with the abolition of the direct State tax, the State as a whole would lose its interest in the form of taxation in a given community, the State Board of Equalization would no longer be necessary, and matters of valuation and scope of taxation could be regulated locally in the best interest of the city or town involved.

---

Among the plans which, it is supposed, Gov. Odell has under consideration for increasing the State's indirect sources of revenue, are a renewal of the small recording tax on mortgages, a readjustment of the inheritance tax with a view to increasing its revenue-raising power, and a readjustment of the liquor-license law so that a larger part of the tax shall be retained by the State. The hope is again expressed that the mortgage-recording tax may prove acceptable, if not wholly satisfactory, both to those who believe in mortgage exemption and to those who do not. Doubtless such a tax would be welcomed by the former class, for they showed themselves ready to accept it last year. But not so the latter. The mortgage-tax bill last year was smothered through the influence of "up-State" legislators who believe in vigorous taxation of mortgages. They were not deceived by the recording tax, which they regarded as practical exemption. Perhaps, however, they may prove more pliant this year. New problems are raised by the suggested readjustment of the inheritance-tax law and the liquor-license law. The popularity of the latter has been largely due to the amount of revenue which it brings yearly to the various localities of the State. The success of a change on the lines proposed would be at best doubtful. Yet the need of more revenue, to the extent of at least $5,000,000, is imperative if the abolition of the direct State tax is to be permanent.

---

The Legislature of Vermont has acted with amazing promptness on the high license bill which is to reverse the historic policy of the State on the liquor question. Except for minor modifications, which will be settled in conference of the two houses, the new law is complete. It will be referred to the people early in the new year. Probably few Legislatures would have learned their own mind so quickly on a matter of

such importance. This high-license and local-option measure has several interesting features. It adopts the excellent Massachusetts-Connecticut plan of an annual referendum on the licensing of saloons; it sets a minimum fee of $500 for a general license, which seems low as compared with $1,000 in Massachusetts; and a maximum fee of $1,200; finally, it grants a fermented-liquors license at $250. The working of this last provision will be watched with interest, because it has proved almost impossible in practice to establish the theoretically desirable distinction between places where light drinks are sold, and those where ardent spirits are dispensed. A fanciful feature of the bill is an anti-treating clause. The complete conversion to the local-option idea of a State which has long been given over to the hypocrisies of statutory prohibition should do much to strengthen the case of genuine excise reform.

---

The Birmingham (Ala.) *Age-Herald* of November 11, hits the nail on the head in its comment on an attempted lynching affair in the neighboring town of Anniston. Fortunately, in this case, the troops were called out by the Governor, and were available in time to prevent the mob from putting to death a negro who had not been identified, who had not committed any crime in Anniston and was not "wanted" there—except to meet the popular demand for a lynching. The words are those of the Birmingham paper. "Lynching bees," it says, "have become the pastime of the rougher element of a community. They seize upon each and every occasion for that purpose. Excitement is what they want—pastime, recreation. For such a state of things a moral revolution is necessary. The better citizens of Anniston appealed to the mob in vain, and such scenes will occur until a public sentiment is created that will put them down." A moral revolution is wanted, but where is it to begin? Who is to put it in motion? Preaching does no good. Editors can accomplish nothing by mere writing and printing. Nothing except the administration of law and the punishment of lynchers by death or long terms of imprisonment will ever put an end to the practice of lynching.

---

The announcement that the cruiser *Philadelphia* has been condemned by the navy's Chief Constructor is of great interest as showing the perishability of the modern war-ship. The *Philadelphia* was built in 1888 by the Cramps, and has therefore been in service only fourteen years, minus many months spent at navy-yards for repairs, of which she has required not a few. Now she must be stricken from the navy list, according to law, because it would require more than half of her value to repair her once more. She has long been known as a "lame duck," and is now chiefly valuable as an object-lesson, having cost in her short existence about $2,000,000. Had she been a wooden ship, she would, with anything like proper care, have lasted very much longer, as is shown by the presence on the navy list of such veterans of the seas as the *Lancaster*, built in 1859, and the *Enterprise* and *Essex*, which date from the seventies. Another interesting vessel of the "new navy' which is about to disappear is the dynamite cruiser *Vesuvius*. Who does not remember the terrifying stories of the volcanic effect of her dread projectiles which came to us from before Santiago in June, 1898? The Spaniards were overthrown nightly amid convulsions of the earth unequalled before Pelée. Like many another tale of the Caribbean, these yarns proved merely that romance had not passed from the globe, and now the *Vesuvius* is to be sold for a song, being not even available as a plebeian torpedo boat, while admittedly a failure for her specific purpose.

---

It is eloquent testimony to the prosperity of the Canadian Northwest that the Grand Trunk Railway is planning to extend its line to the Pacific. The new road will pass far to the north of the Canadian Pacific, and will open up a region the wealth of which in agricultural and forest products is only beginning to be realized. Whether the project will be favorably received in Parliament remains to be seen. There has been considerable prejudice against the Grand Trunk because it uses Portland, Me., as its chief Atlantic terminal, rather than a Canadian port, and the members from the Maritime Provinces have made this a long-standing grievance. There may also be some feeling against an eventual competition with the heavily subsidized Canadian Pacific. But it is hard to see how such considerations can weigh against the obvious advantages of the new transcontinental line. All the Canadian railways, including the Intercolonial, which is owned by the State, are prosperous, and if the Dominion should oppose the attempt to reach the new territories from the east, she must expect to see them reached from the south. This would mean the diversion of Canadian freights to American lines on a tremendous scale. So the Grand Trunk extension seems to be equally desirable from the point of view of railway and of national strategy. Obviously, the United States will be an incidental gainer from a sea-water terminal only a little to the south of the Alaska boundary.

---

That the English Education Bill could be passed only by a vigorous application of the closure was foreseen from the first. It has at last completed the committee stage under closure "by compartments," and now it is hoped to bring the bill to a vote in a fortnight. Of course, the Liberals make the most of the closuring of the remaining clauses, but it is difficult to believe that a bill which has been in committee rather more than forty days has been inadequately debated. Mr. Balfour told the Commons recently that the Crimes act of 1897 was closured after fifteen days in committee, and the Home Rule bill of 1893 after twenty-eight days. The real grievance of the present Opposition, Mr. Balfour failed to admit, namely, the clumsy drafting of the bill. Frequently, the Ministry has seemed to be in doubt as to the meaning of its own measure, and the bill certainly invited that mass of amendments which have so unduly protracted the debates. The bill will become law soon. In fact, the Opposition, since its failure to secure the Irish members, has had much of the random quality of a debating society in committee of the whole. Important concessions to Nonconformists, and a provision by which the County Councils may delegate their educational duties to sub-committees, should do something to reduce initial hostility to a measure the workableness of which remains wholly problematical. There will be opposition in the Lords, but it will probably prove ineffectual.

---

The German Chancellor has hit upon a new way of influencing public opinion at home—by having his views explained in foreign newspapers of standing. One such statement appeared, the other day, in Paris. The latest journal to be favored is the Vienna *Neue Freie Presse*, which recently contained an apology for his attitude in regard to the revision of the tariff, now the foremost question in Germany. His position was stated to be that of a "Constitutional Statesman" ever bowing to the will of the majority—a figure of speech which Bismarck frequently found of use, and frequently abandoned in favor of the "prerogatives of Emperor and Government," when he was in open opposition to a parliamentary majority. Von Bülow, according to this statement, is certain that, if the tariff boat is wrecked, the boatman will yet survive, and there seems to be some ground for his belief, in view of the fact that his recent disastrous defeat has left him still at the helm. Upon the question whether the boat will sink or not, the *Freie Presse's* correspondent was not able to throw much light. The Chancellor is doubtless still hoping, but in the eyes of many observers he is hoping against hope, for his craft is waterlogged already. It is attended in its course by the dislike, distrust, and enmity of the common people, who rightly see in the tariff bill heavier burdens for themselves, that the land owners may profit.

### *THE PRESIDENT'S RETREAT.*

An "authorized statement from the White House," like a speech from the throne, must be read between the lines. When it has to confess a blunder, it does so under the guise of correcting a "misapprehension"; and when it announces a change of policy, it covers it up with the assumption that the *volte-face* was really the original line of march. All these well-known characteristics appear in President Roosevelt's explanation of his plunge into Addicks's political gas tank. In substance, it is a retreat. Mr. Roosevelt has taken fright. Such a volume of protest has gone up against his dalliance with the most unblushing corruptionist in American politics, that he has seen it to be impossible for even a spoiled child of party like himself to persist in that course. So he puts the best face he can on the matter, and says he never intended the Byrne appointment to be a sop to "the faction with which he was allied."

We think that Col. Roosevelt might have fled down this political San Juan hill in a more manly fashion. It is evident, too, that, in the hurry of his retreat, he forgot a good many things which still require explanation. If Byrne's appointment had nothing to do with Addicks, why was it announced directly after that ill-smelling boss had called upon the President in company with the dirty-work member of his Cabinet, Postmaster-General Payne? Why did Mr. Payne at once follow it up by explaining in public that the President had determined to recognize Addicks? Why did Mr. Roosevelt himself say to so many callers that the Addicks Republicans in Delaware were evidently in the majority, and must have at least their share of the patronage? These are among the "misapprehensions" which the White House statement does nothing whatever to allay. As we say, it would have been much better if the Rough Rider had a little less uncertainly sounded the retreat on his "authorized" bugle.

Still, we think there can be no doubt that the President has climbed down. His statement will so be taken in Delaware, we believe. Those Republicans and Democrats who have been fighting, at such fearful odds, with the execrable corrupter of that State, will at last be relieved of the fear that Roosevelt's sword was to be used against them. They will, it is to be hoped, strain every nerve now to compass the final defeat of the most despised and hated boss in America. If the President, after the warning he has had, shall hereafter lift a finger to aid Addicks, receive him, or one of his henchmen, at the White House again, or throw the weight of a single Presidential post-office (or allow the Postmaster-General to place even the fourth-class offices) against the men who are struggling for the honor of Delaware, he will be held up anew to deserved scorn as a partaker in Addicks's political crimes. The eyes of the country will be on him, and we have every confidence that his sense of the sleepless vigilance of the press will be such as to keep him from another lapse like the Byrne appointment.

His defence of that, considered merely as an isolated case, is but a limping performance. He puts it partly on personal grounds. Byrne, he says, was "a stanch supporter of the President when he ran for Governor and afterward." This brings the appointment into the category of those "good fellows" whom Mr. Roosevelt is bound to take care of and comfort with offices. "Joe" Murray was one such personal servant of the President's foisted upon the Federal service. He would make out Byrne to be another. But saying nothing for the moment of the fine grace with which such appointments come from a professed civil-service reformer, there were two reasons, in the Byrne case, with both of which the President should have been acquainted, and either of which should have been sufficient to prevent him from naming the Addicks man as District Attorney. In the first place, he was not competent. His mishandling of the office had lost him the confidence of the community, and had brought down upon him a rebuke in open court from the Federal judge of the district. This was notorious. On the other hand, there stood the temporary incumbent of the office, with overwhelming endorsements of the highest character. But the civil-service reformer in the White House passed over the fit candidate and took the unfit "stanch supporter." Quite apart from that, Byrne was, let the President say what he will, nothing but a swollen braggart of the Addicks following. Since his appointment he has been bursting into interviews, declaring that he and Addicks and Roosevelt were going to wipe out the anti-Addicks element of the party in Delaware.

In that taint was ample cause for refusing his appointment, and there is ample cause, too, for demanding that the President now withdraw it, and for contesting and defeating Byrne's confirmation by the Senate, if he will not. That is the next point of attack for independent and unbought newspapers. They have won a great victory. They have stirred up public opinion of such formidable kind that it compelled even a headstrong President to take the back track. After taking the measure of what he euphemistically calls the "misapprehension" caused by his tentative alliance with Addicks, he fled incontinently. The President has, we say, had his lesson. He has learned that even his popularity and prestige will not enable him to defy decent opinion. He has found out that the most indignant protestations of virtuous motives will not be accepted as an excuse for recklessly bad acts. This is a great gain—both for him and for the country. It is full justification for the attitude of those newspapers which scorned the policy of suppression and silence, set forth the facts, spoke out their mind, and roused such a sentiment that the President did not dare disregard it.

---

### *IMPERIALISM UNDER THE MICROSCOPE.*

"I do not think," wrote a well-informed American resident of Samoa in 1899, just after our glorious little war in the islands, "that Admiral Kautz, who had orders to investigate matters here, saw a single person outside those who were directly interested in aiding and abetting the Chambers minority. At every turn I found him set in his ideas, and intent on making up a cause of quarrel. He is a testy, dictatorial sort of old chap, and has been goaded and flattered into getting the United States into one of the most cowardly and scandalous of wars. I fairly believe that had Capt. White of the *Philadelphia* been here there would have been no war at all; not a dollar's worth of property would have been sacrificed, and no valuable lives lost." We quote this statement from the *Evening Post's* issue of May 17, 1899, because the King of Sweden, after a careful and unbiassed examination, has declared that the action of the American and British war-ships in Samoa in April, 1899, was unwarranted and indefensible, wanton and cruelly wrong, both to the Americans who lost their lives, and to the Samoans who were butchered by rapid-fire guns and magazine rifles—in the name of Christianity and civilization, of course!

The pretence which led to the fighting—that it was necessary to protect foreign citizens and property—King Oscar demolishes absolutely, by proving the absence of the slightest danger. The "invading forces" against which the operations were undertaken by the Americans and British, could not have crossed the bay because of the tidal conditions, and therefore menaced no one. Their opponents, the adherents of Malietoa, had been brought to Apia by the American and British war-ships on the authority of a decision of the Chief Justice, "a third-rate American lawyer," whose judgment was wrong on its face and in direct contradiction to the opinion of the consuls in the islands, who recognized Mataafa as the lawful head. To make our case still worse, there was nothing, as King Oscar points out, in the terms of the Berlin Act, or any subsequent agreement, "which authorizes one of the signatory powers, or a majority of them, to take action to enforce the provisions of the act, or the decisions of the Chief Justice. . . ." Our

conduct was therefore based on misconception, if not on fraud, in the interests of a handful of unprincipled conspirators. Our course was without the slightest authority in law and morals, and had the result that two great nations were nearly brought into open conflict. It is evident now that the responsibility for this, as well as for the destruction of life, rests with Rear-Admiral Kautz and Chief Justice Chambers.

Proper characterization, in the interests of truth and right and international morality, of their conduct and the work of our sailors in 1899, exposed all critics to the usual retorts, such as "lack of patriotism," "cowardly failure to support our brave defenders when under fire," and "readiness to discredit our own flag," with which criticism of our Philippine policy has made us all so familiar. The action of the Samoans in killing hostile Americans and British in self-defence was "savage butchery" and "slaughter," in the eyes of the Administration organs (we quote from the *Tribune*), and was calculated to "arouse a feeling of indignation and a desire for retribution." "Right-thinking men," said this same newspaper, editorially, "will regard the event as another argument in favor of making stronger the authority of civilization [in the islands]. . . . The civilization of the world requires that the islands of the sea should be made safe stopping-places for peaceful commerce, and civilization has rights that even barbarism is bound to respect." And it gravely affirmed that we must govern Samoa for the Samoans, despite the views of those who would "scuttle out" of the Philippines, in order that our merchant vessels might "break the long run across the Pacific without danger of the decapitation of the passengers and crew"!

But our Solons in Washington were not far behind the *Tribune* in their desire for retribution and their promptness in placing the blame. Such distinguished and trustworthy leaders of public opinion as Senator Stewart of Nevada and Representative Hull of Iowa knew whom to hold responsible. It was Germany, of course, that was at fault. "Does she want to fight?" asked the Senator. "If so, she may be accommodated." "If Germany persists in her course," said the cool-headed and statesmanlike chairman of the House Committee on Military Affairs, "there may be war." President McKinley was more cautious, but even this great lover of peace felt that Mataafa must be punished and a larger naval force sent at once. To think otherwise was to dishonor the memory of our two brave dead officers, Lieut. Lansdale and Ensign Monaghan. The European suggestions that Rear-Admiral Kautz's actions be disavowed, were met with the scorn and contempt which are always the due of the meddling foreigner. We were solemnly reminded how Admiral Diedrichs had treated Dewey in Manila. The warning given by James H. Mulligan, for many years our consul in Samoa, that "the disorderly conduct, the cheating by means of false weights, the drunkenness, swearing, and fighting are all supplied by the whites," was unheeded. How that entire house of cards has collapsed now!

We have gone at length into this discreditable episode in our national history, not to proclaim our country's shame, but to call public attention to this incident in our over-sea Imperialism as it appears when studied under the microscope of a non-partisan investigator. It would hardly be possible to show in a more convincing or compact way what evils interference in the concerns of distant peoples inevitably brings in its train. In Samoa our boasted Anglo-Saxon superiority carried with it war, rapine, and destruction, as the result of fraud and wrongdoing, just as it has done in the Philippines, with the added evils of pestilence and famine. It is characteristic of Imperialism that, following this career of wickedness, the Samoans should have been partitioned off among the Powers, "to keep them from being troublesome." We know, too, of no other instance which brings out so clearly the way in which judgment and reason are banished, the instant there is friction or collision with another nation. A Stevenson himself may then plead for his adopted people unheard and unrespected.

There is but one bright side to the picture. Thanks to arbitration, the rights and wrongs of the question at issue have become known, and are settled for all time. If it cannot restore the dead or right the wrong, international arbitration has none the less achieved one of its most substantial victories. Had war with Germany come instead, who would ever have known where the truth and right were to be found?

## *MR. BALFOUR ON NATIONAL JEALOUSIES.*

Mr. Balfour made his first speech as Prime Minister at a Guildhall banquet a fortnight ago, and closed it with a noteworthy plea for comity and peace between nations. This was not reported in the cable dispatches. These have a fashion of dilating on everything in the nature of international friction; a firebrand speech of a Minister who has looked too long upon the red wine, they parade at length; but a mere official utterance in favor of civilization and peaceful progress is quite too unexciting. Yet it is really an event of the highest importance when one of the most powerful rulers of Christendom can, with all the sincerity befitting a gentleman and scholar such as Mr. Balfour is, use the language which he did. He said:

"There is no desire which, I think, ought to be more constantly present to the minds of European statesmen, there is no sentiment which they ought more sedulously to cultivate, than that spirit of international tolerance, international comprehension, and, if it may be, international friendship and international love, which, if duly encouraged, will have the most powerful effect in the future whenever dangers menace European peace. That this should happily result from the common union, from the cultivation of affection between European peoples, and from the mutual understanding of European statesmen, ought to be the most earnest prayer of every man who has at heart the future of civilization and that peace upon which civilization is based."

Of course, such a deliverance from the Prime Minister of Great Britain at once provoked, in the Continental press, an outburst of that very cynicism and distrust against which he had spoken so emphatically. Several German newspapers—never more "reptilian" than when they are trying to inflame international jealousies—professed to see in Mr. Balfour's words all kinds of sinister meanings. He was in trouble about his own armaments; therefore he was craftily trying to induce Germany not to go resolutely ahead with her plans for a powerful navy, deficit or no deficit. We all know that sort of international sneer. It was freely indulged in by a part of our press, and by some of our public men (speaking in private, of course), at the time of Prince Henry's visit. "We shall not build one battleship the less for his coming," one of our Joey Bagstocks of diplomacy was reported to have said. This habit of being "devilish sly" in the face of every graceful attention or generous word from foreigners is becoming too ingrained. It is rapidly destroying unaffected sincerity in international relations as surely as a similar temper would poison the intercourse between man and man. Suppose that every time a friend gave you a book or invited you to dinner, your first thought was, "What little game is he up to now?" How long could society endure on such terms? Yet it is precisely that suspicious, mean, unworthy frame of mind which our most voluble mentors would have us cultivate in international affairs. Any nation that comes forward with a friendly mien and greeting, we are told that we must instantly suspect of intending to stick a knife under our fifth rib. How long can the peace of the world be kept with that miserable spirit on the increase?

It is unfortunately true that nations, like individuals, are capable of acts of bad faith or outright villainy. England solemnly promised to evacuate Egypt, but is there yet. The United States pledged itself not to seek territorial aggrandizement as a result of the Spanish war. France annexed Madagascar in the teeth of an agreement not to do so. Germany has made secret treaties behind the backs of her allies. Instances of sharp practice and aggression are truly far too numerous in the history of nations. They are all tarred with the same stick. What we must

remember, however, is that this is the exceptional rule of national conduct. No country is an invariable blackguard. As a rule, all governments seek to live up to their plighted word, do not go out of their way to pick quarrels, act by preference in straightforward ways, not in tortuous, and are not forever scheming to betray and entrap a neighbor.

This fact it is which makes the talk we hear about the duty of arming ourselves against a possible "attack" such a solemn futility. We are asked, that is, to regulate our conduct and order our whole life by what is confessedly the exceptional, the unusual, the improbable. But men do not reason that way in their private affairs, and nations have no call to be more foolish than individuals. Every householder knows, for example, that his residence may be entered by a burglar; but he does not, for that reason, make of it a fort and arsenal combined. Every man who walks in the streets is aware that a footpad may possibly set upon him. But does he, therefore, insist upon going always armed to the teeth, or accompanied by a bodyguard? Sensible men take the usual course of things, the "customèd event," as the norm of their action, and do not make wild imaginings and disordered fears the guide of their lives. The same principle holds, or should hold, with States. Their normal condition is peace. Their ordinary action is honest. As a rule, their foreign policy is what it purports to be, and not a mask for ulterior and wicked designs. It is, then, a proof of national folly to act upon other presumptions, in the matter of armaments, alliances, or other plans for the distant future.

"I never," said Mérimée to Senior, "give credit to a nation for any sense. . . . Nations are fools." Surely they would deserve that taunt if, in a civilized age, they were to act as if barbarism had come again, and every country were only watching a good chance to fly at the throat of every other. We must travel upon the beaten highways. We must sail by the great circles. That means the cultivation of good faith with all nations, and a scornful turning of the back upon that cynical and devilish spirit of international distrust against which Mr. Balfour registered his weighty protest.

---

### *WANTED: A SCHOOL FOR ART COLLECTORS.*

Dr. Bode, the learned and caustic director of the Berlin Museum, discusses the "American peril" for art in the newly founded *Kunst und Künstler*. Europe, he believes, is by no means in danger of impoverishment, for the knowledge of the wealthier American collectors is by no means equal to their zeal. That the modern captains of industry have all the power of a Marshal Soult he is willing to admit, but he insists that they lack the discrimination which led the great plunderer infallibly to the best that the churches and galleries of Spain and Italy contained. Times have greatly changed in America since amateurs of the late H. G. Marquand's type cautiously acquired picture after picture, weeded out their acquisitions with severe critical taste, and were content to give a lifetime to the furnishing of a single gallery. In those days pictures were the white stones in a collector's pathway; to-day complete collections. This tendency towards the wholesale purchase of masterpieces has produced a peculiar class of picture brokers who contrive to furnish masterpieces, singly or *en masse*, as fast as they are wanted. The result is, that Europe is being relieved of works of art which are hearty good riddance.

This contention of Dr. Bode's is supported by many concrete instances. Mr. J. P. Morgan's famous Raphael was offered to all the great European galleries at a fraction of the price he paid for it; and refused. Even more exemplary is the case of Mr. Henry Walters, who has recently bought the Massarenti collection at Rome. At the time of the sale the *Evening Post* incautiously protested that stories of an obscure gallery which fairly rivalled the national collections of Europe were far too good to be true. For this *caveat* it was roundly rebuked by the *Times*, which urged the purchase of the Massarenti pictures by some New York art-lover, and found the hostility of the *Evening Post* to the importation of these *chefs d'œuvre* wholly inexplicable. Dr. Bode does not tell the story of the assembling and unloading of the Massarenti pictures, but he does tell enough to show how natural was the *Evening Post's* distrust.

> "Whoever, like myself," says Dr. Bode, "has had the pleasure of seeing this collection, knows that it would be difficult to name a second that is so void of good things and contains so many mediocre pictures and forgeries of great names . . . as the collection of Don Marcello Massarenti, which filled the spacious rooms of a palace near the Vatican. . . . The Italian Government assessed a 20 per cent. export tax at 40,000 francs, so that its estimate of the value of the collection was 200,000 francs."

Mr. Walters is reported to have paid 5,000,000 francs to Don Marcello.

Again, Dr. Bode marvels at the publicity which the sale received in the press of Europe and America—"all this hocus-pocus about a collection which does not contain one noteworthy picture, one remarkable statue, or half a dozen works of a respectable mediocrity!" Mr. Walters's case is treated so much at length by Dr. Bode, whom we abridge, not because it is unique, but because no other American enthusiast has fallen in so deeply as the Baltimore collector.

It would be easy to cite examples by the dozen of the victimization of American amateurs. The auction rooms abound in falsification of all degrees. Reputable dealers import hundreds of nondescript canvases, which are undoubtedly "of great antiquity," christen them optimistically, and sell them under the names of the great masters. We have seen in a Fifth Avenue auction room a landscape bearing three signatures, one illegible, the second "Wm. Hart," the third no less a name than "G. Inness." This was eminently a case in which the buyer "paid his money and took his choice"; but it is rarely that the fraud is of such childlike simplicity. Obviously, the purchase of bad works of art abroad, at a long price, does not constitute an "American peril." Possibly the purchase of bogus great masters at home does.

A remedy for this state of ill-regulated enthusiasm for art is not immediately apparent. We cannot compel adventurers upon the troubled sea of collecting to take on trustworthy pilots. The millionaire collectors are within their rights when they prefer the counsel of willing but untrained friends who pass for connoisseurs, the advice of dealers and brokers with a profit to make, or the suave blandishments of "venerable prelates" with a taste for dubious pictures and an instinct for the main chance. But it does seem as if something analogous to university extension for the ignorant poor might be planned for the ill-informed rich. Our captains of industry have not the leisure to learn as their predecessors in art collecting did, by long residence abroad and loving association with the best works of art. Yet they might acquire adequate connoisseurship, at no great expenditure of time, in a school established for this purpose. The proceedings of such a "seminar" of multi-millionaires would unquestionably be in the nature of an experience meeting. Mr. Morgan, who has been on the whole fortunate in his acquisitions, but indiscriminate in the prices he has paid, would naturally compute the millions he has paid in excess of market values. His listening confrères meanwhile could make mental comparisons of the sum total with the estimated amount of water in the Steel and Shipping Trusts. Senator Clark might safely base his "experience" upon the case of a little Dutch picture, the pedigree of which Dr. Bode traces. It was sold, twenty-five years ago, with the refuse of the Berlin Gallery as a Vercolje—a third-rate painter—for about 500 francs. It came into the Preyer collection at Vienna, where it gained a full generation in antiquity through being transformed into a Metsu, and 49,500 francs in price—50,000 francs was its valuation at the time of the sale to Senator Clark. Mr. Walters's part in the proceeding would obviously be to contrast himself with that noble connoisseur, his father, to apply the right names to the pictures of the Massarenti collection

when possible, and, when those "ancient paintings" defied classification, to distinguish the work of the restorer or forger from the old canvas or panel upon which the fabrication was wrought. All these confessions would tend to the edification of inexpert collectors and the confounding of rascally art brokers.

As for the American peril, which Dr. Bode dismisses so cavalierly, it has been and has passed. In the sixties and seventies, connoisseurs of the stamp of William M. Hunt, Mr. Quincy Shaw, the elder Walters, and a score of equally ardent if less conspicuous lovers of the best in art were quietly picking up the finest pictures of the contemporary French school. None of these art lovers were men of great wealth, as that is measured to-day; nobody then wrote or talked about the "American peril." But the result of that patient yet passionate quest has been, that there are not enough Millets, Rousseaus, Daubignys, and Corots of any quality to supply the outlying countries of Europe, while French critics who would pretend to completeness must study French art on this side of the Atlantic. This seems to show that there are perils and perils, and that our millionaire collectors might profit, not only by the school we have suggested, but by the example of predecessors who made of collecting a lifelong avocation, and an art in itself.

## ARCHÆOLOGICAL EXPLORATION IN EGYPT.

OXFORD, November 9, 1902.

The annual meeting of subscribers to the Egypt Exploration Fund took place in London on Friday, November 7, in Burlington House, and had especial interest for the numerous American subscribers to the Fund, inasmuch as Sir John Evans, President of the Society, was able to announce the formation of a general committee in Boston. This year in America is also marked by some prospect of extending the interest in the Fund to Colorado.

The report of the Treasurer, Mr. Grueber, of the British Museum, was encouraging, and the proceedings were rendered especially interesting by the two addresses of the President and of Prof. Flinders Petrie. Sir John Evans began his address with a warm tribute to the late Mrs. F. Llewellyn Griffiths, well known in America as the close friend of Miss Amelia B. Edwards, and as a remarkable worker in the field of Egyptology, most especially, perhaps, as the author of the 'Atlas of Ancient Egypt'. Dr. J. H. Gladstone and Mr. Abraham Haworth were also spoken of as among the generous supporters of the Fund removed by death. This chronicle of losses was closed by a tribute to the services of Gen. Charles G. Loring of Boston, and of the Rev. E. A. A. Hoffman of the Episcopalian Theological College in New York.

In reviewing the year's work, Sir John first dealt with Professor Petrie's discoveries among the Royal Tombs and the Temenos of Osiris, at or near Abydos. The results, published for the most part, yielded one more name to the list of kings before the First Dynasty; and many worked flints of various shapes had gone to illustrate this prehistoric period in the museums of England and America. A special extra publication detailing work carried out by Messrs. McIver and Mace at El Amrah and Abydos was also announced, and the great activity at present displayed throughout the civilized world in matters Egyptological was pointedly dwelt upon. Next, Sir John spoke of the Archæological Survey, and of Mr. Davies's facsimile work, which has this year supplied important omissions in and given connection to the scenes of the tomb of Mery Ra, the largest and finest in the northern cliff near Tell el-Amarna. Mr. Davies also visited Thebes, and secured a complete record of the important tomb of a Theban magnate, Aba. This tomb, and the small ones of the southern group, are the subject of the first volume of Deir el-Gabrâwi, in the publications of the Survey. The second volume will give the remaining tombs, identifications by an expert (Mr. Boulenger) of the fishes there sculptured, and a chapter by Mr. Crum on the Coptic *graffiti*. This will clear the docket of the Survey. Its next year's memoir is "already far advanced," and of exceptional interest because of its display of "the art of the heretic period in all its strangeness." A strong appeal for more adequate support for this department of the work was then in order.

Sir John next turned to the labors and publications of the Græco-Roman Branch, adverting to the large volume of Tebtunis Papyri just placed in the hands of subscribers as representing their subscriptions for the years 1900-'01 and 1901-'02. "We are indebted," he said, "to the University of California, which provided the funds for the excavation, for the necessary number of volumes (at an agreed price) to supply our subscribers." These papyri were obtained from the wrappings of mummified crocodiles disinterred at Ûmm el-Baragât in the Fayûm, and Drs. Grenfell and Hunt enjoyed the help of Mr. J. G. Smyly in their decipherment. The documents ranged from 120 to 90 B. C.—a few coming down to B. C. 56. There were three fragments of anthologies or epigrams, and an extract from the second book of the Iliad (eighty lines); but the bulk of the volume consisted of political and economical documents of the later Ptolemaic period, ordinances of Euergetes II. and Soter II., official letters and local petitions. Of these last, one concerned a burglary by which a robe and tunic belonging to the petitioner's mother were feloniously appropriated. They were valued at one talent 4,000 drachmas, and at 4,000 drachmas. "Strange as it may seem, there were dining-clubs in those days, of the accounts of which portions are forthcoming. The members at each dinner were usually about twenty in number, and each paid 100 drachmæ, exclusive of wine, bread, and garlands. The names of the guests, usually about four, are given on a separate list." Finally, after a reference to Appendix II., with its conclusion that, for the second century B. C. the accepted view that the ratio of a silver to a copper drachma was 120 to 1 must yield to a ratio varying from 500 to 1 to 375 to 1, and, after intimating that this newly established ratio would make the petitioner's valuation of his mother's stolen attire a less exorbitant one, Sir John offered his congratulations to the learned decipherers of these papyri. It may not be amiss to advert here to the circumstance that the generous American subscriptions to the Fund have not been at all proportionately given to the Græco-Roman branch. The value of these papyri to classical learning is so great that it seems not unreasonable to expect those interested in the classics to come forward generously in the future.

The third volume of the Oxyrhynchus Papyri was announced for publication in July next; it will contain portions of two odes by Pindar, a large fragment of Menander's 'Kolax,' two mimes, one partly in verse, a fragment of the 'Cesti' of Julius Africanus concerning a MS. of Homer's Odyssey found by him in Palestine, a fragment of Plato's 'Gorgias' and of the 'Iliad,' and also a fragment of Baruch's 'Apocalypse' in the Greek original, now first brought to light as the source from which the current Syriac version is derived.

There followed a review of changes in extant Egyptological museums (to which might be appended the organization under Mr. Lythgoe of an Egyptological department in the Boston Museum of Fine Arts), and then the President went into the details of the formation of the new committee in Boston, where, he said, "the independent supporters of the Fund" have constituted

"a local Committee, under whose charge we may hope that the affairs of the Fund in Boston will prosper, and that the office in that city will, as heretofore, be regarded as the headquarters of the Fund in the United States. The new Committee is exceptionally strong, and consists of seven members, the emeritus Professor of Greek Literature at Harvard, Dr. Goodwin, being the Chairman. His renown as a scholar is world-wide, and he is well known as having been the organizer and first Director of the American School of Classical Studies at Athens. He is a D.C.L. of Oxford and an LL.D. of Cambridge and Edinburgh. His colleagues are Mr. Thornton R. Lothrop, Mr. Theodore M. Davis of Newport, R. I., Mr. Gardiner M. Lane, Mr. J. Ellerton Lodge, Mr. Albert M. Lythgoe, and Mr. Edward Robinson, all well-known men in Boston, some of whom are familiar with Egypt. Mr. Lodge has been appointed Honorary Secretary, and Mr. Foster has consented to act as Treasurer, though at present he has not joined the Committee."

Lack of space compels me to be very brief in summarizing Professor Flinders Petrie's address. On the subject of the building up of the history of the early dynasties, "few perhaps realize," said he, "that what is quoted now as a matter of course in the order of the kings was entirely brought to light only two years ago in 'Royal Tombs.'" Scarcely a single conclusion had been modified in the two succeeding years which had built up so much more. The main work of last winter was "the reading page by page the successive levels of the early town of Abydos." An exact continuity between the end of the prehistoric age and the beginning of the 7,000 years of written record had been determined entirely as the result of archæology. Our knowledge had gone through four stages: gold-hunting, art-hunting, inscription-hunting, and archæology-hunting. Each stage had been despised as foolishness by those which preceded it, each in its turn had shown a wider interest, a greater importance in the remains of past civilization.

For the coming year's work there was the great site of the oldest Abydos temple, cleared as yet only down to the Eighteenth Dynasty level. The two or three yards of accumulations now left must contain older remains of the temples rebuilt by earlier kings. A series of temples had left their marks, and, he said, the goal sought after was the Temple of the First Dynasty kings on a site which is under the water level until late in the spring. It would be necessary to do the costly work of removing all the upper layers in order to dry the soil below, and finally to work, perhaps, under water.

Two immense Twelfth Dynasty tombs found last year would have to be cleared out. Here the lavish care of the work was attested by red granite sarcophagi of vast size, and hundreds of square yards of polished quarzite, which Mr. Petrie had actually seen in one of them. We might hope for fine objects from these passages and chambers. Also, the excavation of the large fort of the Old Kingdom and of the great cemetery of Abydos was by no means yet completed. So large, indeed, was the amount of work that the committee had agreed to join more workers together, and, he said, "we go out this year a much larger party of united workers than we have ever had before." Mr. Hugh Stannus, a skilled architect, Mr. Currelly, Mr. Rawnsley, and Mr. Ayrton were each to take some part in charge. Miss Hansard had volunteered to give help in artistic drawing, and Miss Eckenstein would attend to camp work on the collections. His own business would be "organizing, arranging, and interpreting the work, drawing and preparing for publication." "Thus," he added, "we shall be a party of nine, and hope to get through in one season what on the old rate would have taken three years." Such a staff would render the Fund less dependent than before on the health of any one person whatever. Indeed, it was the duty of the Society to rescue what they could in Egypt before it was "entirely wrecked by the dealer, the ignorant amateur and speculator, and the commercial destroyer," none of whom left a shred of information. None but the present generation could perform this duty, said Professor Petrie, because, "at the present rate of wreckage, there would be but little left behind for future lives to explore; and he closed with the pregnant and pointed sentence: "Now is the time!" LOUIS DYER.

## CONNEMARA AND "THE GOVERNMENT."

CONNEMARA, November, 1902.

The beautiful broken fringe of western Ireland called Connemara stretches down the coast of Galway for some forty miles. Its rain-soaked valleys furnish some of the poorest and thinnest soil in Ireland. The mountain-sides, covered with heather, gorse, and bracken, picked out with masses of gray rock, are a triumph of color at all seasons of the year. But the soil will not support trees, and the lack of them adds to the wild and gloomy character of the scenery. Connemara means "Bays of the Sea." The coast is so deeply and curiously indented that on an inland drive one is continually encountering salt water where the sea has eaten its way almost to the foot of the confused mass of peaks known as the "Twelve Pins of Connemara." The Connemara peasant grazes his lean black cattle and sheep on wind-swept or boggy patches of rough grass; in the absence of fences, herding is the most common calling, and gives scope for innumerable suits for trespass; for two passions rule the native temperament—the love of pretty litigation, and an insatiate hunger for ownership of the land.

The showy organization of the United Irish League and the prompt action of the Government in putting down boycotting by the League in Sligo have seemed to the outside public an evidence of serious agitation. But it is twenty years since agitation led to serious consequences in this country, and the tactics of the League do not include illegal violence. In Connemara the League has slight hold, a fact due mainly to the increased prosperity of the district. In past years the Connaught peasant was continually haunted by the spectre of potato famine. In the remote village from which I write, the confused and neglected graves of the children who perished in scores in the last "failure" still mar the beauty of the mountain-side.

Two main causes have lightened the burden of Connemara. Emigration, the "passing away" of the people which so impressed Cardinal Gibbons, threatens to be disastrous for the future of Ireland as a whole, but it has proved a blessing to Galway, where the inhabitants were once far too numerous for the soil to support them. Connemara is still a "Congested District," and there are even now cases of terrible overcrowding. The island of Boffin, which has an area of two and a half miles by one, has to maintain a thousand peasants. Every inch of it is cultivated by the spade, for the people are too closely crowded to allow of much grazing. But elsewhere, as a rule, the population is in better proportion to the land. The Galway men, even more than the rest of Ireland, seem to turn their backs on Europe and their faces to the New World. But though a majority emigrate to America, chiefly to Pittsburgh, where there is a large Galway colony, many pass over to Scotland, where there are chances of work in the large towns.

The mere reduction of the population, however, would have done little for a Connemara dependent on potatoes. It is to the efforts of the Government that the people owe their comparative freedom from that slavery—a fact regularly ignored by the Nationalist politician who talks of "the deadly blight of British rule." Ten years ago this place was fifty miles from the railway. The Government, to develop tourist traffic, and for the sake of local trade, ran a line as far as Clifden, seven miles distant, and this railway to Galway has naturally altered the outlook of all the Connemara industries. As an offset to the potato, the development of the fishing industry on this much indented shore was one of the first aims of the Congested Districts Board established in 1891. The Fishery Blue Book, recently issued by the Department of Agriculture and Technical Instruction for Ireland, shows the great progress made in sea fisheries all along the Irish coasts. In 1901 some 26,000 men were employed in the Irish fisheries. Here, to the south of Achill, under the nursing of the Government, the industry has made great strides. The Board has spared no pains or expenditure in its efforts to make the sea support the population to whom the land has proved so grudging. The nearest fishing village now possesses seventeen large boats brought over by the Government from the Isle of Man, and lent on such liberal terms that most of the boats—worth £350 each—are already owned by the fishermen. On every boat, during the mackerel season, a paid expert is provided free of charge to instruct the crew of five men. Moreover, the Government guarantees in all seasons that all the fish landed at the little pier shall be bought by its agents at a fixed price; thus the fisherman need take no thought of the market. A floating marine station is kept up in one of the Connemara bays, with experts whose aim is to discover the conditions under which oysters may be cultivated with profit. Inland the Congested Districts Board is eager to nurse every industry, and to encourage every sign of independent work. It maintains weaving and agricultural experts who are always at the call of the peasants, while in a bad season it sprays their potatoes and furnishes fresh seed. The Government holdings, with their slate-roofed, two-storied cabins and well-fenced land, are meant as an example to the people, who are, as a rule, absolutely indifferent to the condition of their cabins. These holdings are to be acquired on easy terms of purchase by small instalments, and there was keen competition to become a tenant of the Government. The aim in assigning the holdings has been to induce men who live in an overcrowded township to move into new quarters at a distance.

Like Ithaca, Connemara is not a country for horses. Even the Connemara breed of ponies, once famous, is practically extinct. The efforts of the Board have been directed to improving the breed of the stunted horses which it is every peasant's ambition to own, and it has succeeded, at any rate, in more than doubling the value of the foals. But the majority of the peasants cannot afford winter keep or stabling, and the foals are usually sold before the winter season, which prevents permanent improvement in the stock. On the other hand, the importation of expensive pedigree bulls has done much to improve the breed of cattle. The land is not good enough for fattening cattle, so there is no beef to be had, but practically every peasant has at least one milch cow. The Government is endeavoring to oust spade cultivation, and to this end supplies light American machinery and tools at cost price. In the matter of threshing their scanty crops of oats—no wheat is grown—the Connemara native has not even reached the flail stage. The oats are beaten against big round stones, and cleaned of chaff in the wind on the hillside. No threshing machine has ever been seen in Connemara, and last year saw the first horse mowing-machine used with great success on the upland hay.

The visitor who should judge of peasant life in this region from outward appearances would usually be misled. During his recent motor-car tour in Connemara, the new Lord Lieutenant, struck by the squalor of a roadside cabin in this neighborhood, entered and gave a sovereign to the barefooted occupant. But there can be few laborers on Lord Dudley's English estates who need alms less than that family. The

husband is a carpenter in regular work at good wages; he owns a fishing boat and several head of cattle which his holding maintains, and he is supposed to have not less than £200 in the bank. Of how many English peasants can so much be said? Yet this is not an isolated case in Connemara, where the possibilities open to thrift and hard work are much more attractive than for the corresponding class in England; nor can one judge easily of the real circumstances of a people who consider that, by the presence of the pig, the chickens, and a cow or two by the fireside they have secured all the comforts of home. To make such prosperity the rule in barren Connemara, all that is needed is that its inhabitants shall throw off the invalidism of will and the pessimistic apathy bequeathed by their fathers who struggled hopelessly with the potato problem. The aim of the Government is to convince the peasants of the need of collateral industries of all kinds. But it is not easy to induce them to stand on their own feet. Just as the land about him, without constant attention, will revert in a few years to its primitive wildness of heather and bracken, so the peasant of Connemara, if one stops the process of "spoon-feeding," ceases to make an effort on his own account.

An instance of this is a neighboring basket industry. It was started some years ago by an Englishwoman, with the idea of encouraging the people to grow osiers and export their home-made baskets. An easy and profitable cottage industry was thus brought within reach of the younger members of the peasant families. It was, in fact, the sort of attempt that has been made with such success in the Lake country to revive cottage weaving and the like. Here the little basket factory, under its expert instructor, has indeed prospered; the youths are quick to learn, and the basket furniture made there is the best of its kind. The Government was prompt to supply free land for the growth of the osiers. But the industry is bounded by the factory walls and will never take root in the cabins. Those who acquire the art and earn good wages in the factory, no sooner return to their homes than the impulse dies. Work that requires application and skill is wholly uncongenial, and they revert to "the herding," the laziest of all employments.

So much for the efforts of the Government to make the Connemara peasant

> "Content to breathe his native air
> In his own ground."

If he will work for them, "a few paternal acres" can become his on easier terms than in any other country in Europe, but when he has them, though apathetic, he is far from content. It is an unhappy characteristic of the Celt that he never forgets a wrong, real or fancied; and this is seldom reckoned with by his Saxon neighbor, who is always assuming that the Irish will do as he would in the same case—shake hands on an acknowledged grievance and start afresh. When the Connemara peasant leaves his own land, where his priest, in accordance with one of the maxims of the Church, "recognizes the value of ignorance" to an extent that is apt to paralyze Protestant effort; when he gets clear of the gloomy superstitions which he is not allowed to unlearn, and the traditions of oppression and famine which the politicians urge him never to forget, then only can he be counted on for independent effort. In Connemara he is always an invalid; is always liable to a relapse.

# Correspondence.

## ERNST CURTIUS.

To the Editor of The Nation:

Sir: A book of altogether unusual interest has just been published by Julius Springer in Berlin. It is nothing less than a vivid and adequate portraiture of Ernst Curtius, in a long series of personal letters written during a period of more than sixty years. The work of editing has been performed by Curtius's only son, Friedrich Curtius, Kreis-Director of Alsace, with a grace and skill worthy of the editor's name and of his father. Though the letters are printed without comment, the editor has given, in an able preface of ten pages, some analysis of the conspicuous traits of his father. The volume, of 700 pages, does not consist of letters by Curtius alone. A considerable number of letters by other persons supplement the narrative and enhance the interest of the book. These are chiefly letters of George Curtius, the younger brother of Ernst, and of Emperor Frederick. Another attractive feature of the book is the insertion, in their proper chronological position, of many of Curtius's occasional poems, which are characterized by great beauty. It is difficult to give, in brief space, an idea of the interest of this extraordinary book to all who value German culture. It would be hard to find another life which touched intimately so many influential persons, and was from beginning to end so inspiring. It well-nigh spanned the nineteenth century (1813 to 1896).

Curtius seemed to many a favorite of fortune. He himself used to say that his life appeared to him to unfold itself as if according to a predetermined plan. Yet that was only a modest way of saying that he was always ready for extraordinary opportunities and equipped for unusual tasks. At twelve he suffered a savage box on the ear from a severe gymnasial director for collecting, during school hours, contributions to aid the Greeks in their revolt against the Turks! At fifteen he writes to his father of a thought which much engaged him, namely, that of devoting his life to the careful study of Greek and Latin literature, with special reference to the life of the Greeks. At twenty-three, his university studies not yet completed, he was invited by Brandis, King Otho's privy councillor, one of the distinguished scholars of that day, to go to the newly-founded kingdom of Greece and be teacher of Brandis's sons. At Athens there was then gathered an extraordinary array of able men, from many nations, all interested in, and expecting impossible things of, the new Greek kingdom. With these, Curtius, not yet twenty-five, lived in relations of intimate companionship. At twenty-eight, he was back in Berlin, where all doors were open to him, and the names which constantly appear in his letters are those of the men most prominent in science, literature, and art at that brilliant period, not very long subsequent to the founding of the University of Berlin. Among those with whom the young Curtius was on terms of intimacy were Humboldt, Ritter, the brothers Grimm, Lachmann, Meineke, Twesten, Kugler, Haupt, Schelling, Hermann, Boeckh; and the young man speaks of them all, in his letters to his father at Lübeck, with a freedom which is just as conspicuous as his deep admiration for their talents.

At Berlin, Curtius began quietly to publish the results of his studies in Greece. A brilliant popular address on the Acropolis, in 1844, made him the sensation of the hour, and awakened in the mother of the Emperor Frederick an eager desire that this gifted young savant might guide her son. This public address was the outward occasion of Curtius's appointment as teacher of Crown Prince Frederick. Curtius writes to his father: "My address has set Berlin aflame over the Acropolis, and no fault has been found with me except that my closing bow, which I made to the royal box, was not profound enough. The stiff neck of a Republican could be seen!" It was another public address, on Olympia, in 1852, which drew from King Frederick William the declaration that he was ready to take a plate in hand and go about begging for funds to accomplish the excavation of this historic spot. It was reserved, however, for Emperor William, under the inspiration of his son, Curtius's pupil, to carry out this great work of peace of the German Empire.

The roots of what Curtius was were in his father's house in Lübeck. That noble historic city on the Baltic was a never-failing inspiration to him. His father combined practical capacity with a scholar's spirit; he was both man of affairs and student. What a tempting picture to linger over is that of the family life at Lübeck! How strong was the tie that bound together parents and the four brothers, of whom Ernst was the third! From the first absence from home at Bonn in 1832 until after 1854, the home letters make an unbroken series. We follow the hopes and ambitions of the young student; his estimate of his teachers, always kind, but always discriminating; his interesting and novel experiences of life in Greece; and the early years at Berlin, while Curtius was opening, by his industry and ability, the brilliant path which led him to such brilliant success. His six years at court brought him into familiar contact with persons of the highest importance, especially the King; the Crown Prince, afterward Emperor William; and Curtius's royal pupil, Frederick, who are characterized in the letters with the greatest freedom and the greatest delicacy. In one interesting passage, Curtius suggests that perhaps he had been able to do something to make the evenings at court a little less stiffly dull. Another beautiful touch is where he describes, with tender reverence, the fondness of Humboldt, in extreme old age, for reading aloud, at evening gatherings at the palace, longer than others cared to hear him.

These letters reveal a constant interest in men and things, a delight in the full, rich life of a great city like Berlin, and an inspiring joy in labor and effort. One seems, while reading the elevated and striking thoughts which Curtius pours out to his nearest friends, to see him as he was and almost to hear his voice. I have spoken at length of the series of letters to Curtius's father, because these are so full and

so frequent, and give such a picture of Curtius's early manhood. I have not spoken of the letters, of no less interest, written after 1850, when his influence was greatest and the number of his correspondents largest, nor have I allowed myself to speak of his domestic relations, of which also the letters give some hint. I know no more beautiful picture of life in cultivated German circles for the long period which this book covers, than this volume reveals. I do not believe that another so delicate and charming portrait of a great German scholar exists as these letters supply. They are an invaluable record of much that was most important in Germany in the nineteenth century. The book, at least in liberal extracts, must be translated into English.

ROBERT PORTER KEEP.

NORWICH, CONN., November 21, 1902.

### ONE HUNDRED TWENTY.

TO THE EDITOR OF THE NATION:

SIR: The expression "one hundred twenty" in place of "one hundred and twenty" was probably not invented by mathematicians. In Shakspere's "Henry V." we find the following examples:

"Four hundred twenty-six" (i. 2, 61).
"Eight hundred five" (i. 2, 64).
"One hundred twenty-six" (iv. 8, 77).

This fact no doubt accounts for the use of the phrase by the "pedantic, affected person whose dress, speech, and manner" were so distasteful to Professor Scott.

Yours very truly, LEWIS F. MOTT.

THE COLLEGE OF THE CITY OF NEW YORK,
November 21, 1902.

[We learn that "arithmetical" was dropped before "expression" in Professor Scott's communication. He intended "to confine the discussion to the usage of arithmetical writers."—ED. NATION.]

### THE COCKNEY H.

TO THE EDITOR OF THE NATION:

SIR: I was much entertained by the protest of your correspondent, "H. W. H.," against American misrepresentations of the use of *h* by the English. For many years I have observed this linguistic phenomenon with some care, both in England and among Americanized Englishmen, and I have been led to formulate the rule applicable in such cases in about these words: Where the *h* belongs, omit it; where it does not belong, place it. I once asked a London policeman to direct me to High Holborn. "Where," said he, "is it you want to go?" I repeated my question, whereupon he corrected me by saying, "You mean 'igh 'oburn." While in the same city I lodged for some time with a man who told me his name was 'Enry 'Amshaw, but when he wrote it, I noticed that he put h before both words. I recently made the acquaintance of a man on a transatlantic steamer, who told me several times that he was going to "Montrehal." These are a few among the many instances I have noted, and I cannot discover that emphasis has anything to do in the matter.

In this country I have known a number of Englishmen who frankly admitted their peccadilloes in this respect, and corrected them when their attention was called to them until they overcame the habit; but they could give no reason for the peculiarity. It is curious that a good many English people deny *in toto* this misuse of the letter *h*. Not long ago, in a company where I happened to be, a German related an anecdote of a peculiar mishap to an Englishman at a hotel in Berlin. He ordered a waiter to bring him some "hice water," who, understanding that his guest wanted *heiszes Wasser*, brought this. As a result of the misunderstanding, the guest burned himself and berated the waiter for his stupidity. The story was told without the slightest tinge of malice; but a lady who happened to be present, and whose treatment of the letter in question betrayed her nationality, spoke up angrily, declaring that all such stories were pure lies; that no Englishman ever talked that way—and more of the same sort. From the scientific point of view we certainly have here before us one of the most curious phenomena in modern speech. I have come across nothing like it outside of English.

C. N. SUPER.

[Our correspondent adduces no example that contravenes the rule laid down by "H. W. H."—ED. NATION.]

## Notes.

Persons who possess manuscripts bearing upon the career of William H. Crawford are requested to communicate with Ulrich B. Phillips, University of Wisconsin, Madison, Wis. The letters of Crawford to G. W. Erving and to John Randolph of Roanoke are particularly desired.

The Johns Hopkins Press invites subscriptions to a reprint of four notable economic tracts of the nineteenth century, among those, of great importance in the development of economic thought, which have long been inaccessible to students. Publication will begin in January, 1903, under the direction of Prof. J. H. Hollander. Ricardo's three letters on the Price of Gold (1809), Malthus's inquiry into the Nature of Rent (1815), Sir E. West's essay on the Application of Capital to Land (1815), and Longe's refutation of Mill and Fawcett's Wage-Fund Theory (1866). Each tract will have an introduction and (if necessary) annotations by the editor. Subscription to the series has been fixed at one dollar, the edition being of 500 copies. With proper encouragement, similar series for the seventeenth and eighteenth centuries will be undertaken under the same auspices.

The edition of 'Academic Honors in Princeton University, 1748-1902,' to issue next week from the press and to present a list of salutatorians, valedictorians, honormen, etc., since the founding of the College, in both the academic and the scientific departments, will be limited to 500 copies. This is the first complete list of the kind undertaken by any university. The volume may be had of C. W. McAlpin, Secretary of the University.

The Bodleian Society, No. 92 Fifth Avenue, New York, are about to bring out a "Classic Library of Famous Literatures" in twenty crown octavo volumes, edited by Frederick B. De Berard, with a general introduction by Dr. Rossiter Johnson. By "Literature" in this title is meant Tales. Photogravure illustrations, and indexes, are promised.

'Deeper Teachings of Plant Life,' by the Rev. Hugh Macmillan, and 'A History of Christianity from St. Paul to Phillips Brooks,' by the Rev. W. E. Gardner, are nearly ready to be brought out by Thomas Whittaker.

The Hudson-Kimberly Publishing Co. of Kansas City announce for issuance next month 'A Collection of the Writings of John James Ingalls,' edited by William E. Connelley, the biographer of John Brown and General J. H. Lane. The selections have been made by the late Senator's wife.

A Life of Andrew Carnegie, by Barnard Alderson, is in the press of Doubleday, Page & Co.

The ever-recurring English classics mark the advent of the gift season. Macmillan's edition of the 'Vicar of Wakefield,' with Austin Dobson's brief preface and Hugh Thomson's agreeable illustrations, is revived in smaller and cheaper form, retaining all the substance of the original. The 'Essays of Richard Steele,' selected and edited by a namesake, L. E. Steele, M.A. of Trinity College, Dublin, swells acceptably the little Golden Treasury Series (Macmillan). The editor traces Steele's life with the aid of recent information to offset Macaulay's misrepresentations and "the picturesque inaccuracies of Thackeray." He remarks that there is not a trace in Steele's writings "of what it is nowadays the fashion to call the Celtic spirit; nor, indeed, in those of any of the Irishmen who have taken a high place in the beadroll of the great English writers. It would seem as if it were not to be in the land of its birth that Irish genius was to find inspiration." The reader is sure to be propitiated by the sympathetic and graceful introduction. A larger page is devoted to the selected 'Poems by Percy Bysshe Shelley' (London: Bell; New York: Macmillan), to which Walter Raleigh furnishes an introduction, thus referred to in a curious note regarding the decorative drawings by Robert Anning Bell: "If they be found superfluous or irrelevant, they must share that condemnation with the preface." The fore-matter is, in fact, rather perfunctory and none too illuminating. Mr. Bell's designs make a pleasant break in the letterpress, and occasionally afford satisfaction in themselves without respect to the text. As is apt to be the case with pen-and-ink work, the smaller pieces are the best. The book is prettily bound. It has no notes or other apparatus than that mentioned.

It is a real service to reprint the late Clarence King's 'Mountaineering in the Sierra Nevada' as Messrs. Scribner have just done. Originally published in 1871, its extraordinary merit as narrative gave it a fourth edition in three years. It has since gone out of the trade. We reopen the book almost by chance at that well-remembered page of "Cut-off Copples's," in which the blond "Pike" moves a stalled team of twelve mules by judicious swearing without the use of the lash, and modestly disclaims all credit for distinction in this branch of the humanities. "You'd jest orter hear Pete Green. *He can exhort the impenitent mule.*" This is Mr. King's humorous vein. Noble descriptions of nature abound in the chapters on Shasta and Mr. Whitney, or in "Merced Ramblings"; and ever the trained scientific eye interprets the phenomena amid which the geologist

makes his difficult way. There are few better books to read aloud.

Books on musical topics are less abundant than usual at this time of the year. Useful as a gift book is a new edition, in two volumes, of Nathan Haskell Dole's 'Famous Composers' (New York: T. Y. Crowell & Co.). It is not intended for students of music so much as for amateurs who are anxious to familiarize themselves with the principal events in the lives of twenty composers, described in a gossipy style. The third volume of the 'Oxford History of Music,' written by Hubert Parry and devoted to the music of the seventeenth century (Clarendon Press), will be noticed more fully hereafter. A translation, from the Italian, apparently, of Dr. Alfredo Untersteiner's 'History of Music' is supplied by Dodd, Mead & Co. The author quaintly declares in the preface that "those who know that I have lived in foreign lands, almost from earliest youth, will not expect from me elegance in style." He presents his facts, however, in clear language, and increases the usefulness of his book for students by means of bibliographic lists appended to each of the twenty-three chapters. In his judgments he is impartial. For music students, especially those who wish to compose, is intended 'Counterpoint Applied,' by Percy Goetschius (G. Schirmer). It treats of the invention-forms, choral-figuration, fugue, and canon. A good book on the life and works of Mozart in the English language has long been a desideratum, and it has been supplied at last by Eustace J. Breakspeare (E. P. Dutton & Co.). While sometimes undiscriminating in his criticisms, this author does not go to such lengths of adulation as Jahn, and he otherwise improves on that ponderous and voluminous German. Mozart's operas are analyzed in detail. The piano concertos are less satisfactorily treated than they are by Parry in his article on Concertos in Grove's 'Dictionary of Music and Musicians.' In speaking of Mozart's songs the author remarks that few of them were published in his lifetime. "With a Shakespearian indifference to their fate, they remained (for varying whiles) in the hands of those to whom originally sent. This, alone, reveals the state of the music-publishing world in 1791. Fancy a Sullivan, or a Tosti, doing the like nowadays!"

Mr. Winthrop L. Marvin treats with somewhat incoherent enthusiasm of the maritime interests of this country, under the title 'The American Merchant Marine' (Charles Scribner's Sons). He makes it clear that the shipping of the colonies increased wonderfully in spite of the restrictive laws of the mother country, and then proceeds to contend that, after the Revolution, bounties and protective duties were necessary for the preservation of our marine. He insists that a powerful navy is essential for the protection of our commerce, and proves that it throve immensely when we had almost no war-ships. He clinches the argument by showing that our privateers constituted by far the most efficient part of our naval force when we actually engaged in war. So he continues, insisting that our marine was ruined for lack of subsidies, and, of course, winding up with a demand for the payment of bounties. The fallacy of these views was thoroughly exposed by Mr. D. A. Wells, and it would be idle to repeat his facts. When Mr. Marvin forgets his protectionism, he writes entertainingly of ships and their voyages; but his material is taken largely from other works on these subjects which are not likely to be superseded by his own.

Several addresses by Mr. Henry Cabot Lodge are reprinted in a volume entitled 'A Fighting Frigate,' published by Charles Scribner's Sons. The 'Fighting Frigate' is, of course, the *Constitution*, and it is needless to say that Mr. Lodge discourses of her career with martial ardor. The other addresses are on John Marshall, Oliver Ellsworth, Rochambeau, Daniel Webster, and three of the recent Governors of Massachusetts. The essay entitled "Some Impressions of Russia" is adapted to correct many of the vague notions prevalent concerning the economic condition of that empire.

We cannot say that Mr. John B. McMaster's 'Daniel Webster' (The Century Co.) adds much to our knowledge of the character of that statesman. Indeed, we fear that readers whose information was derived exclusively from this book would fail to understand a very critical period and a very instructive career. But the account of Webster's life in its most conspicuous incidents is readable, and the impartial, not to say unsympathetic, attitude of the author is favorable to the formation of an unbiassed judgment by the reader. No attempt is made to criticise Webster's speeches from a literary point of view, and his public activity is represented rather as that of a politician than of a statesman.

The little volume, 'In City Tents,' by Christine Terhune Herrick (G. P. Putnam's Sons), holds a deal of wisdom ready for the using by young couples about to go to housekeeping in New York. "The City Tent" is the small flat, and "in city tents," observes the writer, "every one lives in every other person's pocket, so to speak." Her pages are full of excellent practical counsel for the young home-makers, from the time they begin to look for their flat till they are ready to give little dinners and modest after-theatre suppers. In the matter of summer Sunday outings, the book comes near to being a suburban guide, and a good one. Touching food and clothes, it gives sound advice as to the principles of eating and dressing without too closely touching on the receipt-book or the fashion magazine. It is an unpretending manual for unpretending young persons whose lines are cast in narrow spaces. Its matter is sensible, its manner kindly, genial, twaddle-free; its views sane, hopeful, and conciliatory, treating the janitor and the husband as men and brethren.

The dictionary arrangement of 'Harper's Cook Book Encyclopædia' will commend itself to all who resort to it. Classification of breads, cakes, fish, gravies, puddings, sausages, etc., under this scheme goes hand in hand with abundant cross-references. The only fault we have to find with it is, that the rubrics of the main alphabet and the sub-rubrics are not distinguished typographically. "Frog's Legs, Grilled," for example, is in the same letter as "Fruits in Blanc-mange Border," the first following entry under "Fruits." The recipes are very numerous, and some not easy to find in cook books are here given. General remarks on the art of cooking precede the dictionary, and the inside covers contain "the cook's time-table," and weights and measures. Sixteen photographic illustrations display the set table or various articles of food as cooked and served.

In revising his 'First Manual of Composition' (Macmillan) Prof. Edwin H. Lewis has profited by experience and virtually recast the whole. One novelty, in the punctuation section, is the introduction of forty typical sentences to be learned by heart. The section on description is attended by thirty copies of prints after paintings, statuary, architecture, natural scenery, or portraits from life, with Frederick Douglass and Booker Washington closing the series of great men led by John Stuart Mill.

The little primer of supplementary reading in geography, 'Strange Lands near Home' (Ginn & Co.), consists of extracts from papers that have already appeared in the *Youth's Companion*, some by well-known and practised writers like Mrs. Julia Ward Howe, Arabella B. Buckley, Joaquin Miller, Frederick Schwatka, etc. They all relate to the Western hemisphere.

From the same firm we are glad to greet a reissue of the late Jane Andrews's 'Seven Little Sisters,' a series of girl pictures from all over the world that might be regarded as a development of the opening chapter of Judd's 'Margaret.'

'Colonial Children' is the theme of the first of the "Source Readers in American History," selected and annotated by Prof. Albert Bushnell Hart, with collaboration (Macmillan). There has been a free handling, modernizing, abstracting of contemporary narratives from Hauk Erlendsson's saga of a Wineland baby (1000 A. D.) to Francis Hopkinson's 'Mock Examination' (1784). Here is part of Madam Sarah Knight's lively account of her horseback ride from Boston to New York in 1704, and Franklin's "Too Much for the Whistle"; the strict rules of Harvard College in 1660, Increase Mather's story of his rescue from Indian captivity, and Gov. Bradford's of the first Plymouth landing. The illustrations, some ancient, have been well chosen, and the scheme is much to be commended for school or home.

The second volume in the above series, Mabel Hill replacing Blanche E. Hazard as Professor Hart's helper, deals with 'Camps and Firesides of the Revolution,' and gives us dutiful seven-year-old John Quincy Adams's letter to his father, in 1774; something from the journal of Mme. Riedesel; passages from Timothy Dwight, and from Peter Kalm (on negro servants and slaves, among other things); the story of Putnam and the wolf, of Daniel Boone; some verse, many good pictures again. The third volume, 'How Our Grandfathers Lived,' with Anne Bliss Chapman's assistance, does not fall behind the others in interest; In Town, In the Country, Travellers, Out West, The Indians, At Sea, The Army, At School furnishing the themes for selections. We regret to observe that none of these miscellanies has an index, while the table of contents is very meagre.

The October issue of the Essex Institute Historical Collections is noticeable for a bringing together of authorities regarding "The Affair at the North Bridge, Salem (Mass.), February 26, 1775"—an early discomfiture of the King's troops, about which much has been written by local antiquaries. The article is accompanied by a print of Bridgman's painting of the historic scene, and by portraits of participants or wit-

nesses to the incident, from Timothy Pickering to Capt. Richard Derby.

Among the historical manuscripts published in the November Bulletin of the Boston Public Library is a letter of Gen. Henry Knox, written in 1777, in which he declares that he is "surpriz'd and shock'd at the supiness shewn by the New England States on the untoward situation of our affairs at the northward." He is "much diverted," however, "at the ridiculous exhibition of the [Boston?] money makers on the suppos'd appearance of the enemy in the Bay." There is an interesting confession of a man who "raised" bills of credit in 1776, showing the prevalence of the crime in Massachusetts and the lack of appreciation of its dishonesty. Nathaniel Appleton, writing from Boston in 1778, says in reference to the coming of a British agent, "oh the pittyfull shifts they are put to send over an half begotten illbegotten Hemorphridite which is neither male or female Dependant or Independent not yet born, yet sent across the Atlantic to accomplish more than 60,000 men could do, Oh! strange."

In the Paris letter printed last week concerning the Museum of St. Germain, there was a slip in the last paragraph but one (eleventh line from end), where "Louis XIII." passed for "Louis IX."

—The Rev. A. J. Church has long since proved himself to be a capital story-teller, and many who know nothing of his ripe scholarship have reread his tales from Homer and Virgil. In 'Stories of Charlemagne and the Twelve Peers of France' (Macmillan) he leaves the classical period and moves forward to the Middle Ages. Most of the legends which are here recast for popular use come from the *chansons;* but one of them at least, the story of Ralph the Collier, seems to be unknown in a French version. The Early English Text Society has recently published the Charlemagne romances as they were translated by Caxton and Lord Berners, but, on the whole, the Carolingian cycle is much less familiar to the generality of English readers than is the cycle of the Niebelungen Lied. To the historian the vagaries of folklore are almost as entertaining as they are instructive. In the case of Charlemagne the distortion of fact is less glaring than in that of Attila, but it is still considerable. On the whole, legend tends to abase the great emperor rather than to exalt him. Such touches as that in the Heimskringla Saga, where Sigvat the skald christens Olaf's son Magnus, after King Karl Magnus, "the best man in the world," are rare. Usually Roland and the peers are the true heroes, while Charlemagne is somewhat belittled by their prominence. Mr. Church recalls the analogy of Agamemnon and Achilles, which is quite to the point. "The real Charlemagne," he adds, "was a very great personality, one that impressed his age as deeply as any man has ever done; in these stories he often appears petty, capricious, and obstinate." The tales in Mr. Church's collection present a large number of the cavaliers who figure most prominently in the *chansons* of the twelfth century—Roland, Oliver, Fierabras, Turpin, the crafty Maugis, and Ganelon the traitor. For the sake of Shakspere we must also be glad that Huon of Bordeaux is included among the foregoing worthies, all of whom are somewhat better known than himself. This is an excellent series of tales, and one that will make good pabulum for boys of fourteen who are hungering after adventures.

—The last volumes issued by the Selden Society, Volume XIII. for 1899, the appearance of which was much delayed, and Volume XV. for 1901, deal with two obscure departments of the English law of the thirteenth century, the peculiar laws applicable under the Angevin kings and their successors to the forests and to the Jews. 'Select Pleas of the Forest' are extracts from the proceedings of the Justices of the Forest in their "eyres," or circuits, through the forest counties of England. Their editor, Mr. G. J. Turner, shows that the forest eyre, far from being purely an instrument of tyranny, was a part of the financial machinery of government, and was chiefly concerned with protecting the forests and raising revenue in the shape of fines. He gives a valuable introduction, describing the various forest officers and their functions. In an appendix he supplies a very learned glossary, in which the rich mediæval vocabulary of forest terms is admirably explained.

—Less learned, but even more interesting, is the later volume, 'Select Pleas, Starrs and Other Records from the Rolls of the Exchequer of the Jews,' edited by Mr. J. M. Rigg. This is a selection of extracts from the records of the Exchequer of the Jews between 1201 and 1290, namely, from the time of the Jewish Charter of Liberties granted by King John down to the expulsion of the Jews under Edward I. An excellent introduction by the editor describes the various persecutions—fiscal by the Crown and physical by the people—from which the Jewish community suffered. Indeed, considering the smallness of that community (about 18,000 in 1290), the fact that they had a monopoly of the money-lending business, and the fact that the legal rate of interest seems to have been 43 per cent. per annum, it is no wonder that they were both hated and persecuted. The anti-Semitism of the present day has far less excuse. The Justices of the Jews, of whose proceedings full specimens are here given, were an outgrowth of the Court of Exchequer, and were appointed to assist that court in dealing with cases affecting these most valuable chattels of the Crown. Considering how little original work has been devoted to the mediæval history of the English Jews, and how copious are the sources, Mr. Rigg might have done well to illustrate his points by reference to other authorities. Prynne's 'Demurrer' of 1656, the pioneer work on the subject, and Mr. Joseph Jacobs's very learned little book on the 'Jews of Angevin England,' make one feel that Mr. Rigg has hardly done justice to his material.

—The botanical collections obtained by the Hopkins-Stanford Expedition to the Galapagos Islands on the western coast of South America, were referred to the Gray Herbarium of Harvard University for determination. In the important paper printed in the Proceedings of the American Academy for October, Dr. B. L. Robinson presents the results of careful studies by himself and certain associates, here and abroad, in regard to the peculiar vegetation of this interesting group of islands. In Mr. Darwin's Life (I., p. 276) we read that it was the critical study of the peculiarities of the flora of the Galapagos Islands which was "especially the origin of all my views." With the comparatively rich material now available, in addition to Darwin's some two hundred plants, Dr. Robinson set himself about the task of ascertaining "(1) in how far the vegetation of the archipelago is really peculiar, (2) to what other floras it is most nearly related, and (3) the complicated affinities existing between the florulæ of the different islands." Besides these interesting questions, he desired to throw new light on the origin of the islands themselves. Concerning the points just enumerated, Dr. Robinson says: "While it is thus clear that the Galapageian flora is only an outlying portion of the American flora with a strong specific differentiation, it is impossible to trace its relationship closely to any one section of the Pacific American vegetation. It can only be said in a general way that nearly all the plants of the archipelago are identical with, or obviously related to, species of the Sierras and Andes, or of the Pacific Slope, between Lower California on the one hand, and northern Chili on the other."

—Two views have been held regarding the origin of these islands. The first regards the group as having been raised by volcanic action, and the following facts are urged in support of the suggestion: "(1.) All parts of the islands now visible are obviously of volcanic origin. (2.) The islands are separated from the mainland by a very considerable depth of ocean (more than 1,500 fathoms). (3.) The western coast of South America shows no sign of subsidence, but rather of marked elevation in recent geologic time." Under this view, the clothing of the islands by vegetation has come from seeds, etc., brought thither by winds, currents, and birds of passage. The second view considers the islands as having resulted from the subsidence of intervening land, and hence as being continental islands, or, as one may say, the tops of mountains once a portion of the mainland. The late Dr. Baur, much impressed by the curious relations which exist between the plants of the different islands, was led to adopt the theory of subsidence as more satisfactory than that of elevation. Concerning these noteworthy relations Dr. Robinson presents very interesting statements, which, however, are too long for transcription here. He treats the subject with an impartial hand, and finally arrives at the conclusion that "the botanical evidence, so far as it has yet been made out, is opposed rather than favorable to the subsidence theory."

## FURNESS'S HEAD-HUNTERS OF BORNEO.

*The Home-Life of Borneo Head-Hunters:* Its Festivals and Folklore. By William Henry Furness, 3rd, M.D., F.R.G.S. Philadelphia: J. B. Lippincott Co. 1902. Octavo. Pp. xl, 197. 88 full-page illustrations.

A rare charm characterizes Dr. Furness's account of some forest tribes in North Borneo. It is not a traveller's story of his wanderings among a strange people, nor a scientific student's record of observed facts, but a skilful combination of both story and record. His object is simply to

describe the native, his appearance, home, occupations, amusements, and, so far as he could learn them, the motives for his actions. So we watch, with him, from the veranda of the common house, the life-current as it flows from morn till night. We take part in expeditions, both for making war and for peace, and join in the elaborate ceremonials and feastings at the naming of a boy. Seated before the fire at evening we listen to the rude music and song and watch the dance, or hear some chief tell of his education as a head-hunter and explain and defend his superstitions. Here, too, we are told the meaning of the tattoo-marks on the body, the feathers on the shield, the carvings on the house-posts, the flight of birds, and other omens essential to the success of a tribe's undertakings. Nearly every important event in the native's life, including sickness, death, and burial, but not marriage, is more or less fully treated. Incidents personal to the author are introduced, and, though always subsidiary to the main theme, greatly heighten the lifelikeness of the scenes pictured. But what contributes most to the charm of the narrative, possibly, is the genuine attachment of the author for this forest-folk. The Kayans and Kenyahs, who seemed at first to be merely uncouth savages, came to be regarded at the end of a twelvemonth's residence among them as "kind-hearted, devoted friends." Naturally, the attachment was mutual; and to the resultant unrestrained, free intercourse between host and guest we owe some of the most interesting and important passages of the book. We should not omit to mention, however, that the reader's enjoyment is enhanced by the author's literary skill and quiet humor, a direct inheritance. The importance of Dr. Furness's work as a contribution to ethnological science, as well as its attractiveness, is increased by the skilful and abundant use of his illustrations. There is scarcely a statement capable of a material representation which is not accompanied by the reproduction of an admirable photograph that enables the reader not merely to verify, but to amplify, the text.

The impression which Dr. Furness's account leaves is of a tropical people who, having reached a certain stage of development, have had their further progress arrested, but who, for some reason, are not relapsing into savagery. Their architectural ability is far above that of many half-civilized races. Their houses, raised on piles fifteen feet high, are strongly built, well floored, well roofed with ironwood shingles; and not a nail is used in their construction. They are sometimes a quarter of a mile long, and capable of sheltering from six hundred to a thousand persons. Really, they are villages of a single street, the veranda being a public thoroughfare throughout the entire length in front of the private rooms. A highly developed artistic sense is shown in the decoration of the houses with carvings and painted borders around doors and along partition walls, but especially in the tattoo patterns carved in high relief on wooden stamps and the prows of their canoes. These Borneans are agriculturists and have considerable mechanical talent, shown in their blowpipes and canoes. A picture is given of a racing-canoe made from a single log 120 feet long and holding quite easily a hundred men. If it is remarkable that with this intelligence their development should have stopped, it is still more strange that they should not have relapsed into perfect barbarism. The head-hunting propensity, as described by Dr. Furness in a chapter of absorbing interest, it would seem, must inevitably debase those who yield to it. A chief told him how his father made him overcome his instinctive aversion to bloodshedding by killing, when a "little fellow," not a captive enemy, but his old nurse, of whom "I was really very fond." And from that time he cherished, "as his highest aim in life, to add every year to that cluster of human heads hanging from the rafters just above us, and gently swaying in the heat ascending from the flames." Yet he gave the impression of being a benignant, gentle-hearted man. Possibly some light is thrown upon the mystery in his vehement defence of the custom:

"No, Tuan! No! the custom is not horrible. It is an ancient custom, a good, beneficent custom, bequeathed to us by our fathers and our fathers' fathers; it brings us blessings, plentiful harvests, and keeps off sickness and pains. Those who were once our enemies, hereby become our guardians, our friends, our benefactors."

The difficulty of the problem is increased by the fact that a neighboring tribe, the Punans, who are much lower in the scale of civilization, "are not head-hunters, and care no more for a collection of human heads than for that of any other animal, and, therefore, never go on a raid." The English Government is doing all in its power to put an end to the practice by punishing it as a crime.

There can be no doubt, however, that the arrested development of the Kayans has much to do with their slavery to their superstitions, many of which are as old as human nature itself. Dr. Furness has collected a great number of facts showing their prevalence and power. The simplest actions of their lives are affected by them. One of the most common and far-reaching is the fear of uttering the name not merely of persons, but of inanimate objects, lest some evil or misfortune should result.

"A Kayan, Kenyah, or Punan never thinks of saying that he is going to search for camphor, but that he is going to look for the 'thing that smells,' and even this he says in a whisper, for fear the camphor crystals, deep in their secret, native home, might hear and elude him after he had all the trouble of chopping down the tree."

In the preparations for Tuba-fishing, the name of the fish cannot be spoken, but another word agreed upon is substituted for it. "This concealment of the truth," they believe, "deceives all the bats, birds, and insects, which are always keen to report to the fish all the sayings and doings of men, and, as Tuba has not been mentioned, no warning can be given." But the utterance of a personal name may be fraught with an unknown and deadly peril. This invests it with great importance, and the naming of a chief's son is celebrated with elaborate ceremonies, ending with a great feast. As no white man, so far as our knowledge goes, had ever been present on one of these occasions before Dr. Furness, his detailed account has a peculiar importance. The name is changed to suit the varying conditions in their lives. A man gave him as a reason for taking a new name that he had been " 'so sick that the evil spirits were trying to make my soul wander away from my body [and here his voice dropped to a whisper]; so I changed my name; now they will not know where to find me.' He looked furtively on all sides, as if afraid that the trick would be overheard by the spirits." The birds and animals are in league with the evil spirits —"to a Kayan there are no such things as beneficent spirits"—and it is essential to the success of any undertaking that the omens should be auspicious. The flight of a bird or its chirp on the left instead of the right of the path will put a stop to the building of a house. They will give up the cultivation of a rice field if on going to it they chance to see a certain deer or snake. The color of a pig's liver may be a sentence of death to some chief. It was with the greatest difficulty and only by the exercise of remarkable tact, that the British Resident, Dr. Charles Hose, brought the expeditions described by Dr. Furness to a successful issue by prevailing upon the natives for once to disregard the warnings of omen birds and beasts. The daily occupations cease; they neither leave their houses themselves nor allow strangers to enter, for days together, while waiting for a favorable omen, as, for instance, the sight of a certain hawk.

Our author is unusually happy in his references to the children, who, in his lifelike pictures of them, appear to differ only in outward circumstances from their civilized brothers and sisters. Very attractive is his account of a favorite pastime of the young girls:

"It was a sort of game of tag that they were always playing, only, instead of one chasing all, all chased one, and this one would get off some little distance from the rest and then suddenly disappear under water. Then the chase begins. All swim as fast as they can to the spot where she had vanished, some swimming with a rapid overhand stroke, while others swam entirely under the water. Then, possibly still in front of them, possibly far behind, up bobbed the girl who was *'it,'* shaking the water from her eyes and giving a shout of derision at her pursuers. Down she went again, and the chase was renewed, all under water, so long, sometimes, that the surface of the river became perfectly smooth, and no one would have imagined that in another moment it would be again bubbling up and dashed into spray by a crowd of laughing, shouting, black-haired, merry girls."

In the last chapters of a book far too short Dr. Furness tells of a visit to the Punans, a nomadic jungle tribe, and of a fishing expedition, a sport in which all, old and young, men and women, join.

Though Dr. Furness has described his forest friends as a most amiable people, and some of the photographs of the natives show much intelligence and character, it must not be supposed that he is silent as to their defects. What shadow can be darker than this which falls across his picture of this honest, hospitable, gentle race? Among them "there is no such thing as unselfish love. . . . Their lives are almost as purely individual and selfish as are the examples Nature sets before them at every turn in the jungle." And "deep-seated in the heart of the joyous, child-like Borneans there reigns in their bosoms, true to their jungle home, an inextinguishable yearning for a head not their own. Nevertheless, I like them."

BOOKS OF PICTURES.

*Old English Masters*, Engraved by Timothy Cole. With Historical Notes by John C. Van Dyke and Comments by the Engraver. The Century Co. 1902.

*Pictures in the Wallace Collection.* By Frederick Miller. London: C. Arthur Pearson; New York: E. P. Dutton & Co. 1902.

*The Deserted Village.* By Oliver Goldsmith. Illustrated by Edwin A. Abbey, R. A. Harper & Bros. 1902.

*World Pictures:* Being a Record in Color by Mortimer Menpes. Text by Dorothy Menpes. London: Adam & Charles Black; New York: R. H. Russell. 1902.

*Done in the Open:* Drawings by Frederic Remington. With an Introduction and Verses by Owen Wister. R. H. Russell. 1902.

*The Social Ladder:* Drawings by Charles Dana Gibson. R. H. Russell. 1902.

These half-dozen books are essentially picture-books, not illustrated books. The text varies in importance from Goldsmith's classic poem and Mr. Van Dyke's seriously written "notes" to the mere line of legend beneath Gibson's drawings; but in each case save one the text is there only because the pictures first existed, and it is the text which illustrates, more or less well, the pictures, not the pictures which illustrate the text. Even in the one case where the drawings are illustrations of a preëxistent piece of literature, it is made quite evident that the illustrations are the thing in the present edition, and that the text is republished only as a vehicle for them.

Mr. Cole's engravings after 'Old English Masters' are as beautiful, artistically, as his former work after Italian and Dutch painters, and as far from justifying the claim of superior authenticity which his admirers persistently make for them. Mr. Van Dyke makes it again in the preface to the present volume in terms which it is worth while to examine. His first contention is, that "there has yet to be devised a mechanical process that will render the exact values of tones like the lines of the graver," and that color-values "no lens will determine so accurately as the human eye." He is not content, however, with the claim that wood-engraving makes up in truth of tone what it loses in truth of form, but maintains that it has both kinds of truth. He goes on to say: "Moreover, the excellencies that lie in the photograph the engraver already possesses. His picture is always photographed upon the block, and it is upon this block-photograph that he works. Indeed, it is no inconsiderable part of his craft nowadays to amend the faults of the photograph—to add where it omits, and to modify where it distorts"; so that engraving is more accurate, even in form, than the photograph. And yet it is art, too, and "the engraver is an individuality, not a machine; and if he have the artistic sense, he may be a translator, an interpreter."

The idea that because an engraver works upon a photograph, he therefore retains all its virtues as an accurate copy, is little less than absurd; witness any illustrator who has ever been engraved. Did Mr. Van Dyke ever see a tracing, made even by an experienced artist, and will he maintain that such a tracing has all the virtues of the original? It is not even true that engravings after paintings are more accurate in their values than the best photographs. Color values cannot be accurately registered at all in black and white, but the best modern photographs and photographic productions come nearer to rendering them than any engraver has ever done. Wood engraving gives a much richer tone and a more agreeable surface than mechanical process, and is more pleasing to look at, but it is *not* authentic, and no student would ever base any opinion of the original upon a wood-engraving. A passage in Mr. Cole's notes on the engraving after Constable's "Hay Wain" shows plainly that he himself is perfectly aware of the interpretative and artistic nature of his labors. He says:

"I engraved the picture . . . in as bold a manner as I could command, because I wanted each line to print up as fat and full as possible, as I felt by this means I might arrive at something analogous to the rich and unctuous coloring characteristic of the original. Much that was in the original had, of course, to be sacrificed, . . . whole legions of details are ruthlessly swept away. . . . And thus it is with all art: sacrifice is the rule. Art lives by sacrifice."

What Mr. Cole has produced, then, is a series of works of art in wood-engraving based upon other works of art in paint. As such they are magnificent, and no other man has produced their like for richness of tone and beauty of effect, while as interpretations, in another medium, of the characteristic forms of certain painters they have very great merit.

Apart from the aberrations of this preface, Mr. Van Dyke's text is very good—well thought out and clearly written—though, of course, no other critic would agree with all of it. The chapters on Reynolds and Gainsborough are especially good, and yet he seems to us slightly to underrate the latter painter. He is inclined to depreciate Constable a little, and to minimize his influence on the modern French school, and, we think, to misunderstand Turner and to misstate the reasons of the lack of appeal of that strange genius to many artists. He considers Constable a realist and Turner a creator, and seems to think the indictment against the latter is that his work is untrue. Now it is not because Turner's work is untrue to local fact, or even to natural law, that many of us cannot greatly like him—Claude and Nicolas Poussin, whom we admire, were untrue also—but because his imagination seems to us feverish and theatrical rather than broad and tranquil, his style operatic rather than symphonic, his technique audacious and effective rather than sound. But the work of Turner is too big a subject to be dealt with here, and we shall return to it later in reviewing Sir Walter Armstrong's great book.

'Pictures in the Wallace Collection' gives us twenty collotype reproductions by the Autotype Company, printed in a sepia tone, of paintings of more or less merit by well-known artists. Some of them, like Hals's "Laughing Cavalier" and De Hooch's "Interior with Woman and Boy," are of almost the first rank. The one Gainsborough, his "Mrs. Robinson" (Perdita), is of his most charming work, and one of the two Reynoldses is the beautiful "Nelly O'Brien." On the other hand, we have three of the sensual sentimentalities of Greuze where one would be amply sufficient, and the popular character of the work is similarly accented by the three Meissoniers, only one of which is of his best, and by the Horace Vernet and the Delaroche. The admirable reproduction of the De Hooch is an example of how superior to engraving mechanical process can be, even in the rendering of tone and light and air.

Mr. Abbey was ever peculiarly at home in the eighteenth century, and Goldsmith's 'Deserted Village' gives him an opportunity exactly suited to his great and delicate talent. Some of us, perhaps, will never like anything else quite so well as his drawings to the 'Old Songs' and 'She Stoops to Conquer,' but this is probably a matter of sentiment and association. At any rate, we shall like these better than his illustrations to Shakspere, where the dramatic demands were too much for him or for any man. The nature of his art is distinctly idyllic, and in an idyll like this he is at his best, with his old daintiness and charm and character and gentle humor. It is all the more to be regretted that the book-making is not worthy of the literature and the art. The red cover and gilt edges give us pause at the outset, and the staring likeness of the artist, from a photograph, strikes a jarring and discordant note. The heavily coated paper, which may have been necessary for the reproduction of the pen-drawings, is used also for the letter-press, and the badly arranged page and ugly, fantastic type all tend to increase a sense of discomfort which is like that of trying to listen to Mozart with a clatter of tinware in the next room. The Harpers should really treat Mr. Abbey better, for he is one of their most valuable possessions.

Mr. Menpes has gone around the world to produce the hundred full-page plates, many of them in colors, and the hundreds of little sketches in the text, which make the principal interest of 'World Pictures,' and yet the results are singularly similar and not a little monotonous. He has been everywhere, and the pictures he has brought back might almost have been done anywhere. They are little bits, pleasant enough to look at, rather common in color (which may be the fault of the reproduction), not very interesting in composition or line, and seldom of great or celebrated subjects. The pleasantly garrulous text is said to be by Dorothy Menpes, and her hand may have held the pen, but the voice, with its "I did this" and "I painted that," is surely the voice of Mr. Menpes himself. The book reads like a prolonged interview, and, like enough, that is what it is.

In his introduction to 'Done in the Open,' Mr. Wister calls Remington an "historian," and says of him that he "is not merely an artist; he is a national treasure." Let us call him an "historical painter," and admit frankly that, as such, he is more likely to be valued by posterity than most of those who have assumed to themselves that name. His vigorous art, not without a touch of brutality befitting its subjects, has recorded an epoch much as Mr. Wister has himself done it in his "historical novel," 'The Virginian'; and the fast-vanishing types of Indian and scout and cowboy will live for our successors in his drawings. He has little sense of beauty, and for his work he does not need it. He is not a decorator or an artist for art's sake, but an illustrator, in the larger sense of the word; and his illustrations of a time and

a region will be of the utmost value to the future historian. Mr. Maxfield Parrish has recently shown us that there is material in the arid West for another and a more purely æsthetic art; but a good thing of one kind does not make a good thing of another kind less good. Mr. Wister's obligato of scraps of verse will not add to his reputation.

Mr. Gibson's drawings, too, will have an historical value some day, as will all faithful records of the present, though his record contains less truth and more beauty than Remington's. It is the habit to call such work as his "caricature," but the word is to be admitted as just only if it is allowed to connote exaggeration in either direction, for his young men and maidens are as much handsomer than their prototypes as many of his old men and women are uglier than those one commonly meets with. His present set of drawings has more background than some that have preceded it, and will give more idea to the coming student of the *milieu* of his characters than he has sometimes deigned to do, but it has rather less of costume. The student will be taught that American girls of the beginning of the twentieth century were magnificent creatures, and he will learn what a "pompadour" looks like, but he will often be reduced to wonder how their garments were made, or whether, in evening dress, they wore any other than what used to be called a "slip." For the rest, Mr. Gibson's skill of rendering is as great as ever, and his "studies of expression" are, many of them, admirable.

## NOVELS AND SHORT STORIES.

*Captain Macklin.* By Richard Harding Davis. Charles Scribner's Sons.

*Whom the Gods Destroyed.* By Josephine Dodge Daskam. Charles Scribner's Sons.

*The White Wolf,* and Other Fireside Tales. By A. T. Quiller-Couch. Scribners.

*The Earth and the Fulness Thereof.* By Peter Rosegger. G. P. Putnam's Sons.

'Captain Macklin' is a swashbuckling story of a nice lad whose Irish descent supplies probability for his devotion to "the sex" and for his passion for indiscriminate soldiering. It is the most natural thing in the world to find him campaigning in Central America after West Point has proved inhospitable to his ideas on the subject of hops without leave. No one can handle a Honduras revolution more entertainingly than Mr. Davis, who keeps the reader interested in his young hero and his young hero's heroes—boys of all ages, but alike in their enthusiasm for fighting, with a leaning to fighting on freedom's side. Extravaganza and romance are blended into a beguiling story. The turn given to the love interest is not the least fresh feature in a story that is throughout fresh and spicy.

Miss Daskam's story-book ranges far and wide, from ghosts to drunkards, from poets to librarians. She is at her best, and her best is excellent, in those stories which touch on the extremes of her gamut, where realism is tinged with supernaturalism, as in "A Wind Flower," the most perfect of the group. Here a spindling Maine girl and the Storm Wind join hands almost Hawthorne-wise, affording the reader no shock save one of acquiescence. The Poorhouse Woman, too, half daft because she cannot believe in the Holy Ghost, is the subject of another story that opens tellingly with a bit of sordid detail work, and ends in a half-mystic gleam. The "Ghost Story" is well founded, though rather involved in the telling; and what a strange thing to give the names Darby and Joan to two men friends! "Twilight Guests," wholly a dream sketch, is wishy-washy, while feebleness marks "A Bayard of Broadway" and "A Little Brother of the Books," both dealing with the real unmitigated by the probable. The remaining stories, of the drunken pianist and of the frustrated poet, are original, but not so harmoniously constructed as the best of the others. The title of one, "When Pippa Passed," reveals itself in the end as a pun.

In his book of "Fireside Tales," Mr. Quiller-Couch too roams far and wide, from the palfrey and gerfalcon romance to the modern railway episode. Of all his fields of activity we still delight most in his Cornwall. Smooth and trained as his speech always is, he betrays, or so we fancy, less and less of naturalness in his handling of a topic the farther it strays from his inimitable Cornish coast. This may be a survival of our admiration of "Q's" earliest work, or it may be the old story of the man who never can escape from his first successes, even though he excels them. Be it as it may, we persist in chiefly enjoying such company as the old fisherman who says: "Here you be for the sake of argument, a Christian man, and in beauty next door to the angels, and the only use you make of it is to steal groceries"; and the smuggling Captain who delivers himself of this bit of political economy: "I read my Bible and it says that Cæsar ordered the whole world to be taxed. Now that is sense. Cæsar didn't go niggling away with a duty on silk here and another on brandy there and another on tea and another on East Indy calicoes. Mind you, I've got no personal feeling against King George; but it does annoy me to see a man calling hisself King of England and making money in these petty ways." Their society is to us sweeter than that of the squires and ladies, ghosts and plain citizens, or even than that of the dwellers hard by Borneo. There is not one tale without its adroitness of invention, nor one that does not plainly testify to the writer's gift of expression; but several there are that are made unwieldy by being told as tales within tales, and at least one that reads like a conscious reflection of Kipling. For Kipling, most readers prefer to go to Kipling.

Peter Rosegger's Styrian romance, well translated by Frances E. Skinner, is straight from the heart of a man and from the lap of Mother Earth. Not since 'On the Heights' caught the reading public away into the upper lands of rustic living have we been transported so entirely into a peasant world above the valleys. A modern touch, naturally absent from Auerbach's masterly work, is infused into Rosegger's by his plan of telling the story through the letters of a journalist who, on a wager, has taken service for a year with a peasant farmer. All that he learned, the reader may learn too; he will find it suggestive reading indeed, rousing wonder at the extent and variety of knowledge a peasant must possess in order to manage a mountain farm; wrath at the restrictions that hamper and crush him; aversion to his sordidness; pity at his superstitions; joy in sharing the deliciousness of mountains and forests; interest in the characters and customs of a community good and bad like others, but real, genuine, undiluted, for good or evil. That the family with whom our journalist spent his year was exceptional he admits, yet we find nothing impossible in Adam of Adamshaus, with his childlike simplicity and his unswerving optimism; certainly nothing impossible in his wife, blustering over small trials, turning gentle in great crises, nor in the exquisite portrait of the daughter. The self-appointed farm-hand tells his story admirably, stirring the reader as he himself is stirred by the curses and the blessings of peasant life, with Nature often and society usually against him—at all events in Styria.

## CHILDREN'S BOOKS.

Of the season's nonsense books for the young, 'The Pete and Polly Stories,' by Carolyn Wells, cleverly illustrated by Fanny Young Cory (A. C. McClurg & Co.), sustain the writer's reputation as a humorist of the house of Lewis Carroll and Edward Lear, with a Carolyn Wells personal equation added. If read aloud, a chapter at a time, this book will be equally amusing to child and reader. 'The Golliwoggs' Airship' (Longmans, Green & Co.), versified by Bertha Upton and "pictured" by Florence K. Upton, relates the ballooning experiences of those former friends of childhood, the Golliwogg and his four wooden doll friends. The adventures are amusing and startling, and the pictures duly representative of Golliwoggs and wooden folk. It occurs to the adult reader that an age of entire sympathy with jointed dolls may need explanation of some of the lines. However, in balloon stories especially, striving after the difficult is quite in order. 'Coquo and the King's Children,' by Cornelia Baker, illustrated in color from original drawings by Lucy Fitch Perkins (McClurg), is also of the nonsense family—prose nonsense this, and an account of the travels of two children and the Court Jester, with sundry companions met on the way. The absurdities are quite enjoyable enough to make one sorry that Coquo should be a real punster, such as one meets in comic opera. However, the children may not notice all his iniquities in that respect, and in all others he is a capital fellow, in whom they will delight, as well as in the two children, in the little queen evolved from a potato, and in the wonderful resources of the enchanted green stone house. The illustrations are graceful in design, and, by comparison with much process color work, delicately attractive. 'Grimm Tales Made Gay,' by Guy Wetmore Carryl, with pictures by Albert Levering (Houghton, Mifflin & Co.), can be included among children's books only on the score of being amusing. True, the youthful ear might well be caught by the jingling versification, but for the elders will be reserved the fullest enjoyment of the ingenious perversions of our childhood favorites, and in particular of the quite inimitable "Morals." The black and white illustrations, roughly humorous in character, not inappropriately recall early German caricature.

Nonsense enters into 'Sing a Song of Sixpence: Another Lost Legend' (Boston: George H. Ellis & Co.), but it is by way of the illustrations, eight in number, by Edward Lear, new to collectors, we believe, and now first published. They would be accepted frankly by the youngsters if mated with the nursery rhyme alone; but here there is an attempt to elucidate the rhyme by a half-serious prose invention. The resulting incongruity enhances the humor for adults; what children would make of it must be tested by experience.

'Prince Silverwings' and the accompanying fairy tales by Mrs. Carter Harrison (McClurg) are poetic, telling of princesses and cloud-maidens and such good company. The colored illustrations, by Lucy Fitch Perkins, are charmingly refined in line and conception; the whole volume a handsome one. Little, Brown & Co. publish Katharine Pyle's 'In the Green Forest,' which she herself furnishes with illustrations in black and white, both full-page and in the text. Story and drawings are of a good fairy-tale kind, full of green and winged things, with a plenty of adventure and obstacle before the fairy Red Cap really reaches the Sun Queen and learns magic from her. *Nous autres* may be pained to learn that there is a higher authority on magic than even the Fairy Queen, but the tale is pretty reading. From the same publishing house comes, in sumptuous attire, William Dana Orcutt's 'Princess Kallisto, and Other Tales of the Fairies'; the colored illustrations, gay poppies, beguiling children, soft-tinted marginal drawings by Harriette Amsden. Mr. Orcutt's statement, in his "foreword," that "the wonderful results of the present kindergarten work have emphasized with remarkable clearness the important part which stories play in a child's early life," may make some captious old folk smile as they reflect what a ministering angel Maria Edgeworth was when Froebel lay howling. Further, what would Froebel and the Nature teachers say to Mr. Orcutt's story of the ants being lazy noblemen who are condemned to toil in colonies till they shall have learned to work? And what becomes of kindergarten principles in a sentence like this from the story of the wicked enchanter: "It would not make a nice story at all to tell you about the many evil things which Kron had done, *so you must try not to think about them*"? The stories in the main are pleasing and thoughtful, freighted each with a little cargo of suggestion to the imagination or the moral sense.

No appeal to the imagination is hazarded in 'Six and Twenty Boys and Girls,' pictured by John Hassall, with verses by Clifton Bingham' (London: Blackie; New York: Scribner). An alphabet of good and bad children are held up to cautionary or emulating view, with an absence of subtlety that Gradgrind himself must have applauded. The full-page, highly colored portraits of just and unjust are equally explicit—both, here and there, to the point of roughness. Admonitory literature for small children is so rare in these times that this work may be commended to the parents of children with faults of manner or custom for its warnings and its examples.

'Red Folk and Wild Folk,' the illustrations (both in colors and in black and white) by Edwin Willard Deming, the Indian folk-lore stories for children by Therese O. Deming (Frederick A. Stokes Co.), will charm young children by its gay coloring and large type, while all who care for Indian legend and animal stories will find a peculiar interest in this collection of stories, their almost crude simplicity bearing witness to their pedigree. It is instructive to find again the Rabbit outwitting man.

From Houghton, Mifflin & Co. comes Nora Archibald Smith's 'Three Little Marys,' a Scotch, an English, and an Irish, making a very good trio of stories for little girls, characteristic of the three nationalities, interesting without pretence. Three full-page black-and-white illustrations with a colored cover complete the outfit of this little volume. 'The Lovable Tales of Janey and Josey and Joe,' by Gertrude Smith, illustrated by E. Mars and M. H. Squire, come from Harper & Brothers. The vivid pictures are rather fretty with over-detail, but in the child-lover's spirit. The story, beautifully printed, of the every-day doings of three little children would be a suitable one for extreme youth save for the ludicrous overloading with endearing adjectives whenever any one, but particularly whenever Janey, heaves in sight. The dears, beautifuls, lovables, preciouses, that pepper the pages are quite beyond reason. When Janey says to the robin: "I am Janey Monroe, you know, and my little heart is full of love," and when the robin's answering "chee! chee! chee!" is explained to mean, "You see that I am not afraid, precious Janey," it seems almost time to take precautions against sweets between meals. Another blemish is the constant trick of beginning paragraphs with, "And," as if to put the narrative on a Biblical pedestal.

For larger children and, indeed, as the dedication says, "for all those who love children and dogs," is offered, by the Macmillan Co., Mabel Osgood Wright's 'Dogtown,' with many photographic portraits from life, human and canine, by the author. There is more than dog story in this entertaining volume—there is dog-learning; nor is it surprising to find woodland and bird lore as well filtering through the pages. A mild love interest adds little to the merits of the book, and the small boy Tommy's sweethearting is artificial. It is difficult to imagine a boy of six calling a girl of eighteen "a kind of flower fairy," or saying, "I don't think looks matters much. If you just like things you see 'em all right." Anne is better, and the dogs are entirely delightful, made alive and personal as only the closest intimacy of knowledge and understanding could make them.

'Ten Girls from Dickens,' by Kate Dickinson Sweetser, illustrated by George Alfred Williams (J. F. Taylor & Co.), furnishes the extracted and condensed histories of the Marchioness, Little Nell, and eight others, told as far as possible in the great original's language. A black-and-white full-page illustration accompanies each one—the cover and the frontispiece are especially good—and the whole is a beautiful piece of bookmaking.

'Young George, His Life,' told and drawn by Edith Farmiloe (Frederick A. Stokes Co.), presents in colored full-page illustrations, each one confronted with a line of text, the pitiful status of a "little father" of the London slums, his family, his responsibilities, his fights, his occasional amusements. For the adult it is pathetic with its effective drawings; but there are pages—such as those relating to the drinking mother—which are not suited to children.

'What a Girl Can Make and Do,' by Lina Beard and Adelia B. Beard (Charles Scribner's Sons), is seen to be every variety of handiwork from carpentry to basket-weaving, and all sorts of amusements indoors and out. Girls should surely be greatly pleased with this book. Its full and clear instructions and illustrations should put them in possession of a thousand resources for keeping fingers and minds entertainingly busy.

## BROWNING AND TENNYSON.

*The Poetry of Robert Browning.* By Stopford Brooke, M.A. T. Y. Crowell & Co. 1902.

The title of the first chapter of this book, "Browning and Tennyson," suggests the historic twinship among great authors, as in the case of Homer and Æschylus, Virgil and Horace, Dante and Petrarch, Shakspere and Milton, Voltaire and Rousseau, Goethe and Schiller, Emerson and Hawthorne. As the Greek saying has it, "Nature's dice are always loaded," and they are sure to fall in pairs. It is doubtful if either of the two poets in the present case has before had a critic so thoughtful and judicial as Mr. Brooke. Of the two, his Browning book seems the abler, partly because the breadth and variety of Browning open up a greater width of theme than the slenderer and more fastidious muse of Tennyson. The impression given in this book is that, on the whole, Browning is the author's favorite of the two. He recognizes clearly from the beginning that Browning had always freshness and Tennyson had not; that Tennyson was conventional and clung to a caste, while Browning was much more a man of the world, and at the same time free as to his poems; that Tennyson inherited something of the sentimental strain of the period just before him, while Browning was absolutely himself; that Tennyson was wholly English, while Browning was much more European in his associations and materials, though his temperament was English and "his roughness of form was positively early Teutonic" (p. 31). Tennyson, moreover, "is never impressionist, and never could have been," while Browning, "who had in long poems done the very opposite of impressionism, had also in a number of short poems anticipated impressionist art by nearly forty years. 'Porphyria's Lover,' many a scene in 'Sordello,' 'My Last Duchess,' 'The Laboratory,' 'Home Thoughts from Abroad,' are only a few out of many" (p. 10).

Mr. Brooke thus sums up the essential difference between the two poets:

"He [Browning] strove to paint the whole. It was a bold ambition. Few have fulfilled it so well. None, since Shakespeare, have had a wider range. His portraiture of life was so much more varied than that of Tennyson, so much more extensive and detailed, that on this side he excels Tennyson; but such portraiture is not necessarily poetic, and, when it is fond of the complex, it is always in danger of tending to prose. . . . He loses the poetic turn of the thing of which he writes, and what he produces is not better than rhythmical prose. Again and again Browning fell into that misfortune; and it is a

strange problem how a man who was in one part of his nature a great poet, could, under the sway of another, cease to be a poet. At this point his inferiority to Tennyson as a poet is plain. Tennyson scarcely ever wrote a line which was not unmistakably poetry, while Browning could write pages which were unmistakably not poetry" (pp. 44, 45).

Mr. Brooke adverts to that theory, of which Lowell was so fond, that Browning had Jewish elements if not in his blood, yet in his intellect, spirit, and character, and concludes that he was "a complex creature," whereas Tennyson was not complex. He notes that Browning's love of color was far more intense than that of Tennyson, and that sometimes, as Ruskin says, "it is not color, it is conflagration"; but it is at any rate an essential part of Browning. Browning, he thinks, comprehended women far better. Tennyson could deal with a few simple well-known types, of both good and bad women; but Browning, in describing women, "touched great variety and great individuality"; "each of his women is distinct from the rest." "He neither lowered her, nor idealized her beyond natural humanity, . . . and he has wrought this out, not by elaborate statement of it in a theory, as Tennyson did in 'The Princess,' with a conscious patronage of womanhood, but by unconscious representation of it in the multitude whom he invented" (pp. 346, 348). It is to be noticed, however, that Mr. Brooke's criticisms on Browning's women are among those passages over which the reader of this book will be most tempted to doubt his author's judgment. In dealing with the strong picture of the wanton Ottima in "Pippa Passes" (p. 331), or the poor sinful child Mildred in 'The Blot in the 'Scutcheon' (p. 338), we venture to think that Browning knew what he was drawing far more profoundly than his critic. Again, we should dissent from the opinion that Balaustion was, among women, "the finest creature Browning drew" (p. 389). Mr. Brooke paints admirably the steady lessening of the imagination and steady increase of the intellectual element in Browning (p. 415), and thinks that it had begun even while he was at work on 'The Ring and the Book,' yet points out the exceptional charm and power of a few of these later occasional poems, as "Hervé Riel" and "Pheidippides," while he justly finds some of them "needlessly ugly," as "Halbert and Hob" (p. 433). In the greater part of "Parleyings with Certain People" "imagination such as belongs to a poet has deserted Browning" (p. 435). Mr. Brooke truly says, in summing up his poet's total service:

"He kept, in the midst of a fretful, slothful, wailing world, where prophets like Carlyle and Ruskin were as impatient and bewildered, as lamenting and despondent as the decadents they despised, the temper of his Herakles in 'Balaustion.' He left us that temper as his last legacy, and he could not have left us a better thing" (p. 440).

As a rule, it may be said that, if we recognize Mr. Brooke's own distinction between the imaginative and intellectual in Browning, his critic finds himself most at home in the intellectual, less in the imaginative, and least of all in the domain of emotion. Thus, his analysis of the powerful poem "Caliban" is so profound as to leave nothing to be desired, but in dealing with the much-discussed "Childe Roland to the Dark Tower Came," Mr. Brooke is quite shy and self-distrustful, and almost inclined to think that his poet merely put odds and ends together aimlessly, which certainly was not Browning's way (p. 276). Mr. Brooke quotes "Meeting at Night—Parting at Morning" rather as if they were pleasant little verses in the corner of a village newspaper, instead of being, as they are, strains so concentrated and so perfect as to be likely to live as long and prove as inexhaustible as Sappho's Ode.

We should be doing injustice to Mr. Brooke's rich and thoughtful style if we did not quote his closing words:

"As if the Muse of Poetry wished to adorn the image of his death, he passed away amid a world of beauty, and in the midst of a world endeared to him by love. Italy was his second country. In Florence lies the wife of his heart. In every city he had friends, friends not only among men and women, but friends in every ancient wall, in every fold of Apennine and Alp, in every breaking of the blue sea, in every forest of pines, in every church and palace and town hall, in every painting that great art had wrought, in every storied marketplace, in every great life which had adorned, honored, and made romantic Italy—the great mother of Beauty, at whose breasts have hung, and whose milk have sucked, all the arts and all the literatures of modern Europe. Venice saw and mourned his death. The sea and sky and mountain glory of the city he loved so well encompassed him with her beauty; and their soft graciousness, their temperate power of joy and life, made his departure peaceful. Strong and tender in life, his death added a new fairness to his life. Mankind is fortunate to have so noble a memory, so full and excellent a work, to rest upon and love."

---

*Illustrations of the Book of Job.* In twenty-one plates invented and engraved by William Blake, Author of Designs to "Blair's Grave," "Young's Night Thoughts," etc. London: Published by the Author, 3 Fountain Court, Strand, and Mr. J. Linnell, 6 Cirencester Place, Fitzroy Square. March, 1826.

[One thousand copies issued in facsimile by J. M. Dent & Co., London, and G. P. Putnam's Sons, New York, 1902.]

The latest important work of William Blake was that entitled as above. Linnell was not a publisher in the usual sense of the word, but rather an artist, a hard-working and sucessful painter, who had employed Blake, or encouraged him in this and in other artistic enterprises. Linnell was guided thereto, as it would appear, partly by pure desire to aid a struggling brother artist, partly by that worthy ambition to cause artistic work to be produced which, as a man of feeling at once and of mental energy, he showed throughout his long life. What he thought of Blake's work it is not easy to ascertain; but his actions were such as would do credit to a richer and to a more influential man than Linnell ever was, and he was able to leave to succeeding generations a series of works by the more imaginative man, by the exceptional artist, Blake; works having a stronger hold than Linnell's own on the graver attention of posterity. For in reality there has never been an artist, whose works are known to us, so entirely alone in art, so absolutely apart from any school or the influence of any tradition. To call him a religious painter-engraver is to lead the student astray, because there is no close observance in his work of any Christian traditions, whether artistic or liturgical; and only a general, laic, Protestant Bible-reader's view of Old Testament records. To call him an artist of strong and pure imagination is to exaggerate the importance of his work, because he dealt rather with grotesque exaggeration, such as was excited in his mind by half-gained knowledge and half-understood dreams. To call him an artist of sentiment, of that universal human feeling which is found in the fine art of words even more freely than in the arts of color and form, is to ignore much the greater part of his mental life, namely, its mystical side; whereas, to call him a mystic is to ignore the fact that his rejection of realism proceeded from impatient indifference to what most artists think essential to their art, rather than from a deliberate attempt to reveal or discuss mysteries. Every student of his life is entitled to his own and a separate and distinct view of the combination, in Blake's mental condition, of a kind of insanity with imaginative power and with the tendency to fanciful excess. It might be held with, perhaps, equal plausibility that, if he drew the figure very badly, it was because he could not see it rightly, had never learned its true character, and was, therefore, presumptuous in drawing the figure at all; and, on the other hand, that his spirit was full of visions which crowded one another so closely that there was no time or mental grasp sufficient to see each one clearly, and that he was far too sincere and too direct in his moral aim to spend time in rectifying his drawing or solidifying his composition.

The experience of art-students is usually that they care most for Blake when they are young, and as yet not greatly practised in their art; and yet this is not the universal experience. It would be hard to escape the impression, when some one is found very enthusiastic over the 'Book of Job' or other plates of Blake's, that as yet the greatness and the splendor of the artistic world have not quite revealed themselves to the enthusiast. In literature there is hardly the like of what William Blake was in art; and yet it may be said that there are certain mystics, certain illuminati, whose poems or unrhymed rhapsodies give more pleasure to the beginner in literature than to the veteran. So with the illustrations for the Book of Job; if one is well versed in intelligent, learned, sane, and yet powerful art, he will care less for the dreams and visions which fill these twenty-one plates. The monstrous caricature of an elephant which is used (plate 15) to stand for Behemoth will repel rather than attract, while the final plate, showing how the Lord blessed the latter end of Job more than the beginning, will pass as but half-understood sentimentalism. On the other hand, no one can refuse his tribute of admiration to the design in plate 3, in which the columns and walls are falling upon the sons and the daughters of Job, while Satan presides over the destruction, balanced, as it were, upon a falling stone whose support his spiritual essence is seen not to require. And so it is with the treatment of that same Satan, occurring again and again in the plates; he is asexual, and is partly invested with scales, as if in some suggestion of a lower nature than that of man. The way in which the story is told has at once the good and evil of extreme intensity.

Concentration of horror or of peaceful

tranquillity deliberately intended excludes other considerations. Realism, of course, is entirely remote from the conception of such designs, and yet the separate instances are treated in a realistic way; it is only their combination and their concentration into a scene that is the very reverse of real, which is purely fantastic. Thus, the runner who approaches Job and his wife with the cry, "And I only am escaped alone to tell thee," is shown in headlong race, and, however ill-drawn the limbs, and however ill-expressed the attitude and the action of running (the foot resting flat upon the ground even in the action of running), it is still reality which controls that figure. On the other hand, the presentation of Job and his wife as already overwhelmed with grief, eyes raised to heaven, and hands clasped in attitudes of despair, while still the one runner has only just reached them and the other is seen far behind, is an entirely unrealistic conception, as completely so as if it were expressly announced as a metaphorical rendering of the idea of loss and of grief.

It appears, then, that the very doubts which invest this subject and the hesitation which every art student must have as to the true place in art of the 'Book of Job,' are a sufficient reason for its reproduction. The original work is of very considerable scarcity, and of great cost. The reproduction issued by the London and the New York house and sold here at a reasonable price will be found to give nearly all the artistic value of the original plates; losing more in the brilliancy and beauty of the prints than in other ways, and therefore revealing all of Blake that there is in the designs except his merit and charm as an original engraver on metal.

---

*New France and New England.* By John Fiske. Boston: Houghton, Mifflin & Co. 1902.

It is difficult to review a posthumous book by John Fiske without saying at least one word about the author. The memory of his luminous mind and of his great learning, of his shrewd humor, and of his true simplicity, is as yet too strong to be put by. In most cases the reviewer must keep his attention fixed upon the work rather than upon its writer; but where the thought of the writer's eminence is enforced by the recentness of his death, the ordinary rule can hardly be observed in all its strictness.

There is a further reason why a reviewer of this volume should be tempted to stray from his duty of immediate and particular criticism. In a publisher's preface, it is stated "that 'New France and New England' completes the story of the settlement and development of the colonies up to the point where Mr. Fiske's 'American Revolution' has already taken up the narrative. It therefore gives a final unity to the sequence of remarkable volumes which he has devoted to American history." Here, then, one is tempted to speak of the series as a whole and of Mr. Fiske's historical methods; but such subjects, though attractive, lie beyond the scope of the present notice.

Mr. Fiske was an experienced and accomplished lecturer, as thousands of people in different parts of the country have reason to remember. His 'New France and New England' consists of ten chapters, which might be styled ten separate essays were it not for the fact that most of them are couched in lecture form and were delivered before the Lowell Institute. Personality is, on the whole, more likely to emerge during a lecture than during an essay, and almost every page is redolent of Mr. Fiske himself. His complete freedom from pretence is visible in all his writings, but nowhere more eloquently than here. He talked copiously from the fulness of knowledge, but with no affectation of learning, and his style of writing was equally spontaneous. His genuine interest in the subject of his research is reflected in the animation of his narrative.

While this latest of Mr. Fiske's writings bears genuine marks of his quality, we cannot pretend that we think it by any means the best of his works. To some the title may bring disappointment, for in the contents one finds no systematic attempt to examine the relations of New France and New England, to point a contrast between divergent political systems, or to delineate the successive phases of national rivalry. The first four chapters are given to the historical geography of New France, the fifth to Salem witchcraft, the sixth to the 'Great Awakening' produced by Jonathan Edwards, the seventh to Norridgewock and Louisburg, and the last three to the Seven Years' War. Thus geography and war get most of the text, with witchcraft and Jonathan Edwards thrown in; yet in the whole book there is hardly a word of Frontenac, and no account is given of his policy towards New England.

We feel very certain that, had Mr. Fiske lived longer, his final account of the duel between France and England in America would have possessed greater unity than can be claimed by the book with which we are now dealing. Perhaps a little more care might have been shown regarding points of detail. However, the main thing is that the studies in question exist and have been published. The four chapters on French exploration form a little series at the beginning, and the three chapters on the Seven Years' War make a group by themselves at the end—a group to which the story of Pepperell's expedition against Louisburg may fitly be added. In the middle come the articles on Salem witchcraft and the religious revival in New England. For our own part we must say that we prefer the chapters which treat of life in New England. They seem fresher, although the subjects themselves are well worn, and they show a firmer grasp of the material. The chapters on New France are at the disadvantage of following in the track of Parkman, and there is little to indicate that Mr. Fiske had made a special study of Canadian history. He is much interested in the Indians and the *voyageurs*, but the development of the colony is put altogether to one side.

Mr. Fiske was essentially a humanist in the broader and higher sense of that term. Although the problems of philosophy and science appealed to him deeply, he cared quite as much for the concrete, and did not divorce his intellectual interests from the ordinary affairs of mankind. The depth and quickness of his sympathies go far towards accounting for his success as a popular historian. He was not above being clear and simple, nor did he shrink from putting into his books what the average reader cares to hear about. For perorations and other rhetorical tricks he cared little, but, when touched by the spectacle of such torments as the poor victims of Salem suffered, he could use language of unwonted fervor: "We can but faintly imagine what must have been the destruction of confidence, the breaking of the dearest ties, the madness, the reign of savage terror; and we cannot be too grateful that the gaunt spectre which stalked so long over the fairest parts of earth has at length been exorcised forever!"

---

*John Mackenzie,* South African Missionary and Statesman. By W. Douglas Mackenzie, M.A., Professor in Chicago Theological Seminary. New York: A. C. Armstrong & Son. 1902. Pp. xii., 564, portrait.

The appearance at the present time of this biography is singularly opportune. South Africa is to be "settled," Mr. Chamberlain is on his way as settler, and it is here made clear that he, of all English statesmen, had best secured and held the esteem of the subject of this book. In their views of the needs of the case they essentially agreed. Mackenzie was an imperialist of a class which we do not always quite understand or exactly distinguish. For him imperialism meant the supremacy of the central government—federalism we might call it. His ideas upon it were largely modelled on the treatment by this country of its Territories, and also affected by the problems and results of our civil war. He saw that the greatest difficulty in South Africa lay in the rapidly growing colored population; he was in fact the first to note that rapid increase. Further, he recognized that no white pioneer class could be trusted to act fairly by "natives." They would make of them a subject race, whether slaves in name or not. Yet, for him at least, the races of South Africa were worth saving, must and could be saved. To accomplish that and bridge the gulf for them to self-government—protecting them on the way from being exploited by whites—he advised simple protectorates (using their tribal chiefs) and crown colonies. The last, oddly enough, he compared with our Territorial government. So he fought, and successfully, the incorporation of Bechuanaland into Cape Colony, the spread of Dutch rule—which meant always an enslaved black race with no rights against a white man—and the jurisdiction and system of the British South African Company.

His difficulties were great and of a strange kind. It is hardly credible, and yet this book makes it plain, how little English politicians less than twenty years ago thought and knew about South Africa. They had no interest in it, would not be troubled with it; nothing could be made of it. So they were driven on without a policy, refusing to see either opportunity or duty. To open the eyes of the English to this problem, one to which they were bound to come sooner or later, was Mackenzie's public work. In it he was only partly successful. Entire success would have prevented the Boer war; entire failure would have meant the enslavement of all

the native races. Yet, considering the English attitude, it is rather wonderful that he accomplished so much. Their timidity—so strangely contrasting with present high hands and mailed fists—ran back to a feeling that the mass of the new democracy was unreliable, fickle, and averse to any new responsibilities, and the fear of that democracy was upon them all. That a democracy could be imperialistic never entered their heads or certainly their convictions. Mr. John Morley, of whose honesty Mackenzie thought highly, said frankly: "I grant yours is far the nobler position and begets more worthy and chivalrous feelings"; but yet he rated it impossible. Froude's attitude was still more and cynically hopeless. Mr. W. E. Forster, on the other hand, was with him throughout. With Mr. Rhodes and his kind of imperialism he could have no sympathy; commercialism and money power could, for him, found no true state. He regarded Rhodes as pursuing an essentially double course, Dutch with the Dutch and imperialistic with the English. Of Mr. Gladstone he and his biographer have significantly little to say. It is perfectly clear what Mackenzie thought of Mr. Gladstone's South African policy, but the halo round the figure of the great Liberal leader is still too bright for an English Nonconformist to dare to speak out. Of Disraeli there is not a single word.

This, then, is no ordinary missionary biography, but a book which must make its weight felt both as a record of the past and as a suggestion as to the future. Of defects in the treatment there are few. There might have been much fuller detail on many points, but these are surfaces under which the ashes are still glowing, and the biographer, religious especially, must step cautiously. In the large, Professor Mackenzie has accomplished his delicate task well. The admiring son is far in the background, and we have a strong picture of one man by another. And the claim of the title is fairly made out. This was both a missionary and a statesman. As both, his position may, perhaps, be best summed in the following sentences written in 1891:

"I believe I was the first to point out the possibility of the peaceful opening up of native territories under the Imperial Government, accompanied by the recognition of the rights of natives to their holdings, and by intelligent steps taken to secure those lands to their owners under the Imperial Government." (P. 454.)

"The problem in South Africa is not an easy one in any circumstances. What I fear is that her Majesty's Government is in danger of acquiescing in its own expulsion from active administration in new territories, by a few men in the Cape Colony, before there is a Confederated South African Government to which it could hand over its duties; and I am well aware that no greater calamity could possibly happen to South Africa." (P. 456.)

With imperialism of this kind we can surely have no quarrel.

---

*The Last Days of the French Monarchy.* By Sophia H. MacLehose. Glasgow: James MacLehose & Sons. 1901. 8vo, pp. xiv, 391.

No adequate introduction has yet been written to the history of the French Revolution. Many attempts have been made to picture the *ancien régime*, ranging from the philosophic and highly finished chapters of De Tocqueville to the most trivial of the innumerable sketches of the private life of Marie Antoinette. Many important contributions to the subject are of course available, but we still await a sound and comprehensive explanation of the French Revolution which shall satisfactorily establish the historic continuity between the old and new France. Reasons why such a work should still be wanting are not far to seek. In the first place, the very word "revolution," as Carlyle long ago warned us, is used in almost as many senses as there are writers on the theme. He himself meant by it, if we remember rightly, the upbubbling of disimprisoned anarchy, and many have accepted this definition. Sharply to be distinguished from this notion is the conception of the French Revolution as a great permanent change which separates the France of Napoleon and later times from that of the eighteenth century. The more superficial volcanic phenomena have until recently fascinated most observers. They have recorded the rumblings and the darkness, the stifling fumes and the lightning flashes. The fundamental and permanent alterations have been forgotten in the turmoil of transient disorder. It is obvious that one to whom the upbubbling of anarchy and the prevailing of the powers of darkness constitute the essence of the Revolution, should look inquiringly to the *ancien régime* for an explanation of Hébert and St. Just. The more profound student of the subject will also turn to the eighteenth century for an explanation, not, however, of an explosion, but of an enduring and fundamental political and social reorganization.

Even if writers were at one in their interpretation of the Revolution and its antecedents, they would still have to face an important inherent difficulty of their subject. It is necessary, in dealing with the *ancien régime*, to describe the conditions in France and the lot of all classes of society, from the king and his immediate companions to the peasant. At the same time, extraordinary changes which took place during the generation preceding the opening of the States-General must be even more carefully studied than the ancient political and social organization of the kingdom. Unfortunately, writers have never succeeded in doing justice to both the static and dynamic. The scholar who has best succeeded is, perhaps, Gomel, who, in his 'Histoire financière de la Révolution Francaise,' has exhibited with remarkable clarity and precision the economic conditions, the trend of public opinion, and the experiments of the ministers.

The volume in hand belongs in the same class with Lowell's excellent 'Eve of the French Revolution.' It is a popular and eminently readable account of the most striking features of the old order; for the most part, based upon unimpeachable sources. It is the first of two volumes; in the second, the author proposes to carry on her narrative from the summoning of the States-General in 1788 to the establishment of the First Republic. After a description of the royal town and all its Persian apparatus, there come three brief chapters on the administration, the privileges, and the *philosophes*. Then, with a correct instinct for discovering the real beginnings of the Revolutionary movement, the writer turns back to the Austrian Alliance, and soon introduces us to the Empress's little daughter, to whom the leading place is assigned in the succeeding pages. Marie Antoinette is treated with refreshing candor. The author frankly and fully describes the Queen's gambling and her minor indiscretions, but takes no delight in exposing the weaknesses which the loyal Madame Campan and those who accepted her judgment have been wont to conceal. Since the publication of the correspondence of honest Count Mercy with the Queen's mother and brothers, there is no longer any doubt that, in spite of the fundamental propriety of the Queen's conduct, she exercised a most malign influence upon the public policy, and justly called down the hate of the nation. The writer's account of Turgot and Necker is clear, and perhaps as adequate as could be expected under the circumstances. It is noteworthy that Calonne, the Notables, and the conduct of the Parlements during 1787-8 receive far more attention than is granted them in other popular accounts of the period. This promises well for the second volume, which will doubtless be read with pleasure by those who have profited by the first.

As one lays down the book, he cannot but reflect that, although all may be quite true that has been said, there is a certain failure to grasp the essentials in the critical situation in which France found itself. The pomp and circumstance so vividly described were in no way new, nor were the frivolity of the Queen and the embarrassments of the ministers. Several of the books which would have helped the author to a deeper insight have been omitted from the long list of authorities which she consulted. None of Babeau's admirable works except that on Paris is mentioned, nor Gomel's volumes. Even Rocquain's well-known 'Esprit Révolutionnaire' and Aubertin's 'Esprit Publique au Dix-huitième Siècle' are omitted. The author cites Loménie's 'Beaumarchais,' but not his 'Mirabeau.' Hanotaux's monograph would have prevented the repetition of the old mistake through which the establishment of the intendants is assigned to Richelieu. Lastly, the whole momentous matter of the Church is almost entirely neglected. Something can be done to rectify these deficiencies in the second volume, and the scope of the work should be broadened, if it is to include all the important phases in the regeneration of France.

---

*Early Prose Writings of James Russell Lowell.* With a prefatory note by Dr. Hale of Boston, and an introduction by Walter Littlefield. John Lane.

Thcse who recall the latter pages of Mr. Scudder's delightful biography of Lowell can hardly have forgotten the description (vol. ii., 395) of the pains the poet took with the final revision of his prose writings, going over them all with care, "tucking in" or "erasing" whatever he wished, with his final decision that the "buccaneers" should "go hang." He did not live to see that it would not be so easy as he had supposed to inflict this penalty on the pirate class, or that his own early friends would lend countenance to the buccaneering. The book now before us contains Lowell's college prose, such as it was—and it was poor enough—and those early views of the British dramatists, printed in 'Conversations on Some of the Old Poets,' which he had re-

fused to reprint, as wholly immature and sometimes expressing opinions retracted afterwards. Dr. Hale, in his introduction, goes over ground which he has before traversed in telling the story of Lowell's college days; and does it so hastily that he describes Lowell, as a sophomore, coming into a college room to arrange for a meeting of the "Harvard Union," which all old graduates testify to have been a society for juniors and seniors only; moreover, he gives the name of Charles *S.* Loring to the lawyer with whom Lowell studied, meaning Charles Greely Loring, one of the leaders of the Boston bar. The editor of the book, Mr. Littlefield, is so unfamiliar with the literature of that time as to rate Lowell's magazine, the *Pioneer*, as inferior to the *Boston Miscellany*, to which it was as much superior, during its brief career, as the *Atlantic* was afterwards superior to the *Pioneer* itself. He thinks Mr. Lowell fell behind Nathan Hale, editor of the earlier magazine, in not appreciating the value of the novel, although, as a matter of fact, Mr. Hale's magazine printed no novel, and Mr. Lowell's *Pioneer* began upon one in its first number. This, "The Armenian's Daughter," was contributed by his junior editor, Mr. Robert Carter, then an eccentric youth, whose main peculiarity was the construction, in imagination, of works of fiction on the most enormous scale. His main work of this kind, which he delighted to describe in detail, as being in steady progress, was to consist of twelve volumes, each as large as Eugene Sue's 'Wandering Jew,' then popular; two volumes of this mammoth work being prospectively devoted to an episode consisting of a History of the World, narrated by a hermit amid the Mountains of the Moon in Africa. Mr. Littlefield finally concludes that the once noted Nathaniel P. Willis exhibited "marvellous perception" in pronouncing Lowell to be "a very unfit editor for a periodical," although Lowell afterwards proved just the contrary in the *Atlantic Monthly*, where he had a fair field for action. Such are the vagaries of editors and biographers.

---

*The Leaven in a Great City.* By Lillian W. Betts. Dodd, Mead & Co.

This is an account of New York's East Side poor, impressive from the writer's intimacy with her subject, and from her attitude towards it, at once sympathetic and judicial. It begins with recalling the tenement-house agitation of 1878, inaugurated by the conference called by the State Charities Aid Association. It describes certain Fourth Ward alleys on the very lowest level of poverty and degradation; then moves on to better things—to the improvements effected by the College Settlement work, the forming of Mothers' Clubs, Working Girls' Clubs, and kindergartens; nothing extenuating as to their difficulties and hindrances. Miss Betts's knowledge of the working-girl class lends profound interest to her statement that "the inspiring fact remains that the standard of home life in ethics, as in necessities, is rising." Of moment, too, is her estimate of the great class of independent wage-earners "as far removed from the incapable, the degraded, the vicious, the dependent, the ignorant—who provide the themes for books—as far removed from the worthless, the deficient, the mentally, morally weak, so familiar to the people of wealth who give money or time, or both, to lessen their miseries, as they are in standard and ambition from the people counted wealthy." "There is no word to distinguish them from those who make capital of their poverty, and the world loses much because of the lack of a term that would express the class who are the hope of this nation, whose children are the promise of its established greatness."

For the influences making against the very poor, Miss Betts arraigns chiefly political indifference among voters, and the "divorce between the churches and the political control that makes the environment of the home and the churches." Of many eleemosynary institutions she says: "They exist because so many good people in the community have found greater pleasure in establishing and maintaining them than in working actively to prevent the growth of the condition that peoples them." The pages devoted to Col. Waring bring home this truth: "The greatest benefit that Col. Waring, that man of law and order, conferred upon New York, was not its clean streets, but the moral lesson that a city department can be administered to secure the best interests of the people on the principles that control the best business houses of the city." "Twenty years of Col. Waring, and the moral tone of the most ignorant would be changed." The view throughout is that of the College Settlement. "Little fathers and mothers" receive no sentimental sympathy. Their work is their best training. Some of the chapters plainly were written in the after-election glow of 1901—"The apotheosis, New York redeemed."

Photographs of some of the city's most characteristic old parts lend interest, but even more illustrative than illustrations are the many stories told out of the writer's own experience. The book is, as a whole, a valuable contribution to the consideration of city problems, and furnishes impressive reading.

---

*Theory of Differential Equations.* Part III. (Vol. IV.): Ordinary Linear Equations. By Andrew Russell Forsyth. Cambridge (Eng.) University Press; New York: Macmillan. 1902. 8vo, pp. xvi, 534.

The successor of Cayley here truly presents us with the fifth volume of his useful work on differential equations; for his more practical 'Treatise' on the same subject really forms an essential part of this. No further volume is promised; but the author does not declare that he will give no other, and we are inclined to think that one more will come. Certainly, enough topics have been passed over to furnish forth two, and that richly. Although it cannot be called a complete handbook, the work has a tolerably definite plan and a judicious one. Whatever would more particularly interest an algebraist or student of the theory of groups is omitted. Whatever stood right across the path of a writer on Differential Equations is treated in a general way. Works of several American mathematicians are necessarily expounded in this volume. Prof. G. W. Hill's method forms the subject of one of the ten chapters, and that is meagre allowance. An unfinished MS. treatise of the late Prof. Thomas Craig has been made use of. Theorems by Osgood, Bôcher, Van Vleck, and others appear. A peculiar sort of suggestiveness attaches to that of Bôcher.

Of course, such a book can have no interest to the generality of our readers except in this respect. The premises upon which pure mathematics rests are few and simple. So far as they are capable of definite numeration, there are about a score of them. The reasoning is wholly deductive. If, therefore, deductive reasoning were what the logic books represent it to be; if, as Kant says, it merely explicated what is confusedly thought in the premises; if, as Mill says, it merely registered what had already been accepted, then the total number of mathematical conclusions could not exceed the total number of possible combinations of premises—or, say, something like a million, including the most trivial. By this time, then, pure mathematics ought to be approaching exhaustion. Doubtless, the current impression among ageometrical persons is that such is the case. Yet the four volumes of Professor Forsyth's 'Theory' present, in somewhat full outline, only about two-thirds of the discoveries made during the nineteenth century in a subject which has occupied about one-tenth of the total energy of mathematicians; and far from there being the slightest sign of exhaustion, the bulk of the new work is increasing in geometrical progression, while it is constantly growing more and more profound and broad. As many new *methods* of value now appear in a decade as there were born of new *theorems* in the same interval a hundred years ago. Here is a subject dealing with nothing but the abstract creations of the mind; a subject, too, in which comparatively few are able to make discoveries; and yet it may be doubted whether sixty volumes could give a very much fuller account of the mathematical discoveries of the nineteenth century than could be given in the same space of the discoveries in so rich and universally accessible a field as biology. At any rate, the fact that there is no utterly overwhelming discrepancy affords food for rumination.

---

BOOKS OF THE WEEK.

Allchin, W. H. A Manual of Medicine. Vol. 4. Diseases of the Respiratory and Circulatory Systems. The Macmillan Co.

Alderson, Barnard. Andrew Carnegie, the Man and his Work. Doubleday, Page & Co. $1.40.

Armstrong, Sir Walter. Turner. London: Thomas Agnew & Sons; New York: Charles Scribner's Sons. $40.00.

**THOREAU** *His Home, Friends, and Books.*

**By ANNIE RUSSELL MARBLE**

"Thoreau has been more or less of a mystery to readers of his works. He has appeared only as a dim figure, shrouded in the sombre shadow of the woods he loved. . . . To-day he is recognized by all lovers of our literature as an element of its strength and as a permanent influence. Mrs. Marble has written with these facts in mind, and she has striven to present a full and reasonable estimate of Thoreau as a man, as an author, and as a naturalist. She has produced a good and serviceable book, and the publishers have enriched it with excellent illustrations."—*New York Sun.*

Rockland St. 1909

VOL. LXXV—NO. 1953. THURSDAY, DECEMBER 4, 1902. PRICE TEN CENTS.

## Scribner Books Ready Saturday

*GENERAL DE WET'S LONG PROMISED BOOK*

**Ready Everywhere on Saturday**

# THREE YEARS' WAR

**By CHRISTIAAN RUDOLF DE WET**

With frontispiece portrait by JOHN S. SARGENT, R.A., plans, map, etc.
$2.50 *net* (postage 28 cents).

This is the plain, bluff, unvarnished story of General De Wet's experiences and doings in the great struggle which took place between the Boer and the Briton. The simplicity of the narrative, its sincerity, its soldierly fairness and its unconscious eloquence will make the book appeal to all men who enjoy a story of action; while the light it throws upon military operations and battles, hitherto known only from the English viewpoint, gives it a genuine historical value.

## HEGEL'S LOGIC: An Essay in Interpretation

By JOHN GRIER HIBBEN, Ph.D., Stuart Professor of Logic in Princeton University. $1.25 *net* (postage 12 cents).

Professor Hibben bases his essay on the conviction that Hegel's text, almost unintelligible though many find it, is in reality self-illuminating. He has therefore simplified technicalities and terms and explained their significance in the light of the definitions as given by Hegel himself and indicated by the context.

## MEMORIES OF VAILIMA

By ISOBEL STRONG AND LLOYD OSBOURNE. Illustrated from photographs in the possession of Mrs. Stevenson, Mrs. Strong and Lloyd Osbourne. 12mo, $1.20 *net* (postage 16 cents).

Mrs. Isobel Strong and Mr. Lloyd Osbourne, Mr. Robert Louis Stevenson's stepchildren, have here brought together their recollections of life in Stevenson's Samoan home, and elsewhere on the island. The book contains a chapter on Mrs. Strong's charming little Samoan protégé and one on Samoan songs. There is also an unpublished poem by Stevenson.

*The Third Edition with New Illustrations in Color from New Subjects.*

## ORIENTAL RUGS

By JOHN KIMBERLY MUMFORD. With 16 page illustrations of rugs superbly reproduced in their full Oriental coloring, and 16 full-page half-tone plates. Large 8vo, $7.50 *net*.

**CHARLES SCRIBNER'S SONS, New York**

**TWO ON THEIR TRAVELS**

**By ETHEL COLQUHOUN**

*"Bubbling over with spontaneous humor."*

"A delightful record of a wedding journey through the East Indies, Dutch Borneo, the Philippines (under American rule), Korea and Siberia. . . . Mrs. Colquhoun tells countless amusing incidents without trying to be funny. Her sense of the ludicrous is keen, and she passes on the joke. . . . The little sketches and full-page pictures, some in color, drawn by herself, are very piquant and graceful."—*Providence Journal.*

**AN ILLUSTRATED CHRISTMAS BOOK**

**Pictures and Romances of the St. Lawrence The Saguenay Bay Chaleur Bay of Fundy Lake Huron**

*Written and Illustrated by*
**ELIZA B. CHASE**

WHEN the question of a satisfactory Christmas present to your friend comes up, you often wish that you had some pleasant memorial of last summer's vacation trip which you took together, for such a gift would be sure of an interested and delighted welcome. If your trip was through the quaint places or the summerlands of Canada (or if you or your friend expect some time to take such a trip), Miss Eliza B. Chase's book is a ready-made souvenir which exactly fits your need. It not only gives exquisite pictures and descriptions of the places you have visited, and weaves romances about them which are much better than the ordinary short story, but it most likely includes some choice places to which you have not penetrated and to which you will be glad to direct your journey another year. Quaint songs and stories, legends and character studies, dwellings, heirlooms and costumes, thickly dot its pages, and brush, pencil and pen are freely used to portray their charms. It is an altogether charming book, overflowing with the true spirit of Christmas time. It will be sent to any address, prepaid (and your card enclosed), for $1.50 net.

# PAGE'S BOOKS FOR YOUNG PEOPLE

## BEAUTIFUL JOE'S PARADISE;

**or, The Island of Brotherly Love**

*A Sequel to "Beautiful Joe,"*

BY

**MARSHALL SAUNDERS.**

With 15 full page plates, and many decorations from drawings by

**CHARLES LIVINGSTON BULL.**

*Price $1.20 net.*

(Postpaid $1.32)

"'THE ISLAND OF BROTHERLY LOVE' proves to be a place as interesting as 'Alice in Wonderland,' and as the story is told in the words of a healthy and remarkably real boy, there is no unwholesome sentimentality or mysticism in it. Yet the whole thing is quite a daring flight of fancy, ingenious and original, and, best of all, interesting to children, and even to older readers. . . . Miss Saunders has put life, humor, action and tenderness into her story. The book is sure to be one of the most popular books of the fall and winter season."—*Chicago Record-Herald.*

## The Story of Kate

By PAULINE BRADFORD MACKIE

Author of "Ye Lyttle Salem Maide," "Mademoiselle de Berny," etc.

Illustrated by L. J. BRIDGMAN.

Price, $1.20 net (postpaid $1.32).

"The people, events and atmosphere of the tale are typical of California. Girls will enjoy it and their elders will find pleasure in its pages, for it is youth in the freshness of its happiness and aspiration that is pictured; and it is pictured in a way that is very winning."—*Toledo Blade.*

## A Puritan Knight Errant

By EDITH ROBINSON

Author of "A Little Puritan Pioneer," "A Little Puritan's First Christmas," etc.

Illustrated by L. J. BRIDGMAN.

Price, $1.20 net (postpaid $1.32).

"The charm of style and historical value of Miss Robinson's previous stories of childlife in Puritan days have brought them wide popularity. The 'Knight Errant' of this story is a little 'Don Quixote,' whose trials and their ultimate outcome will prove deeply interesting to the reader."—*Pittsburg Leader.*

*For sale by all booksellers, or sent postpaid on receipt of the price, by the Publishers,*

**L. C. PAGE & COMPANY, Boston, Mass.**

# Some New Books Published by E. P. Dutton & Co.

**LUCA AND ANDREA DELLA ROBBIA and THEIR SUCCESSORS**

*By MAUD CRUTTWELL*

Illustrated with 150 Reproductions. Imperial 8vo, $8.00 net.

"A conscientious and thorough study of a remarkable phase of Florentine Art. The volume is a beautiful example of typography, the illustrations are lavish and help out well the author's text. . . . All that is ascertainable has been brought together in a thoroughly interesting manner."—N. Y. Sun.

**The Eldorado of the Ancients**

By DR. CARL PETERS. Fully illustrated, 8vo, $5.00 net.

This last volume by the well-known African explorer deals with the period from 1896 to 1902. Among other things the author brings evidence to show that the "Ophir" of Solomon corresponds with South Africa.

**A Patrick's Day Hunt**

By E. Œ. SOMERVILLE and MARTIN ROSS, authors of "Some Experiences of an Irish R. M.," etc. Illustrated in text and with 8 full-page color plates, oblong, $2.50.

A genuinely humorous piece by the well-known authors of "Experiences of an Irish R. M." The story is illustrated by some excellent color plates, and the book makes an ideal gift.

**Life and Letters of H. Taine. 1828-1852**

Translated from the French by MRS. R. L. DEVONSHIRE.

12mo, 326 pages, $2.00 net.

"This is a strong, manly, and healthful book—the picture of a noble mind, reflective and full of philosophy, particularly instructive and suggestive in a rushing, struggling, sciolistic age like the present."—Daily Telegraph.

**Tiberius the Tyrant**

By J. C. Tarver.

8vo, cloth, $5.00 net.

"A valuable and entertaining book. The preliminary chapters give an admirably lucid account of Rome's transition from a Republic to an Empire."—Spectator.

"The book is one of manifold interest, fitted to attract and instruct the general reader as well as students of government, of economics, and of the classics."—Nation.

**A Glossary to the Works of Shakespeare**

By Alexander Dyce.

The references made applicable to any edition of Shakespeare, the explanations revised and new notes added.

By Harold Littledale, M. A.

8vo, cloth, $3.00 net.

A much needed revision of a famous work of reference which brings the work into conformity with modern scholarship.

*Write for our new Holiday Catalogue.*

# FOR HOLIDAY GIFTS

*Send for our Unique Illustrated Holiday List*

*By Author of "Black Rock," "The Sky Pilot," etc.*

*First Edition 50,000* **Glengarry School Days** *First Edition 50,000*

By RALPH CONNOR. Illustrated. 12mo, cloth, $1.25.

The new story fittingly supplements "The Man from Glengarry" (now 140th 1,000).

"His material is magnificent in its contrasts and opportunities. Ralph Connor is a man to keep in mind as one of the most virile, faithful and wholesome writers of to-day."—*Public Ledger.*

"His men are sturdy giants of the forest, whose power breathes from every word."—*Tribune, Chicago.*

"His field is unquestionably his own."—*Herald, Boston.*

*A Vivid Mormon Story of the Occupation of the Great Salt Lake Basin.*

## By Order of the Prophet

By ALFRED H. HENRY. 12mo, cloth, illustrated, $1.50.

"He writes with conviction and with a commendable reserve power. There is nothing lurid or sensational or overdrawn about his picture—it is simply tragic, pitiful, heart-rending—a page torn from the story of a ruined life. None of the previous attempts is worthy of being placed in the same class with this really strong story."—*Commercial Advertiser.*

*A True Story of Indian Life.*

## Two Wilderness Voyagers

By FRANKLIN WELLES CALKINS. Cloth, $1.50.

*The author of "The Mississippi Bubble"* says: "Mr. Calkins has done something new. He gives us Indians, but they are not merely buckskinned mankins. He gives us the West, but without pose—a white story done in red."

*A College Girl's Story.*

## Janet Ward A Daughter of the Manse

BY MARGARET E. SANGSTER. Cloth, $1.50.

*Mary E. Wilkins* says: "A really meritorious book for girls is, since Miss Alcott laid down her pen, so unusual; but here is one which meets well the need. . . . An absorbing story; it is full of interest for the general public as well."

*By Author of "Fishin' Jimmy."*

## Aunt Abby's Neighbors

By ANNIE TRUMBULL SLOSSON. Fully illustrated. 12mo, cloth, $1.00.

"A book you will read and treasure, laugh over and cry over, read at odd moments, or study and mark and learn from. You'll give it away and have to get another copy."—*S. S. Times.*

*Where Coal Is King.* *The Coal-Miner's Story.*

FIFTH EDITION

## Those Black Diamond Men

*A Tale of the Anthrax Valley.* By WILLIAM F. GIBBONS. 12mo, cloth, illustrated, $1.50.

Jacob Riis says: "It interested me greatly. . . More power to his elbow."

"It is a series of dramatic human scenes, sometimes with thrilling incidents, sometimes of tragic intensity, sometimes touched with humor. It is written from plain, heartfelt interest in the 'black diamond' men, and the brisk action of the story holds the attention firmly."—*The Outlook.*

*By Author of "A Lily of France."*

## The Little Green God

A Satire on American Hinduism, By CAROLINE ATWATER MASON. 16mo. cloth, 75 cents.

"Has only one fault—it isn't long enough.—Would that other story-tellers coud write so pungently or engrossingly as to make readers long for more. She handles her material with rare skill."—*Boston Globe.*

*A Tale of Two Continents.*

## A Chinese Quaker

By NELLIE BLESSING-EYSTER. Cloth, $1.50.

"In this 'unfictitious' novel Mrs. Eyster has embodied Oriental picturesqueness with Occidental progressiveness, and the romantic element is charmingly interwoven."
*San Francisco Examiner.*

*A Story of Power and Purpose.*

## Fool's Gold A Study of Values

A Novel by ANNIE RAYMOND STILLMAN. $1.50.

"A veritable literary inn . . . A plot that is out of the ordinary. . . . Displays unusual skill. . . . A wholesome stimulant after the incessant cries for recognition from so much that is pernicious."—*Boston Transcript.*

## The Evolution of a Girl's Ideal

A Little Record of the Ripening of the Affections to the Time of Love's Coming. By CLARA E. LAUGHLIN. 50 cents *net.*

Margaret E. Sangster says: "A fascinating study. . . . A sort of revelation and interpretation, frank, ingenious and original."

*By PROFESSOR GEORGE ALBERT COE, Ph.D.*

## The Religion of a Mature Mind

Studies in Modern Problems by the Author of "The Spiritual Life." 12mo, gilt top, $1.35 *net.*

A brilliant, readable, thought-provoking discussion of some practical religious problems in the modern spirit. The essential truths of evangelical religion in the conceptions of to-day. Prof. Coe meets all questions fairly, searchingly, and with practical purport.

"The most important contribution to religious thought for the current year."—*Chicago Chronicle.*

*BY JAMES M. LUDLOW, D.D., Litt.D.*

## Incentives for Life: Personal & Public

By Author of "Deborah." "The Captain of the Janizaries," etc. 12mo, gilt top, 1.25 *net.*

Discusses the determining factors in a life of purpose. Progressive, comprehensive and versatile. Practical because of its concreteness; philosophical because it deals with basal truths. The abundance of metaphor and illustration gives it vivacity, forbids dulness, and renders it stimulating and suggestive.

## Rollicking Rhymes for Youngsters

By AMOS R. WELLS. Illustrated in colors by L. J. Bridgman. 4to, cloth, illustrated, $1.00 *net.*

L. J. Bridgman, whose unique illustrations in "Guess" last year made him famous, has united with Amos R. Wells to produce this ideal child's book. Mr. Wells is already well known as a writer for children.

## The Gift of the Magic Staff

The Story of Paul's Journey in Two Wonderlands. By FANNIE E. OSTRANDER, Author of "Baby Goose." Illustrated, $1.00 *net.*

An ideal blending of the healthfully fanciful fairy element with the healthful teaching of elementary morals. In a most entertaining way Miss Ostrander takes the child through many delightful experiences.

*By Author of "Arabella and Araminta"*

## The Queen of Little Barrymore Street

By GERTRUDE SMITH. 75 cents *net.*

"Leaves an inexplicably pleasant impression. There is a note of joyousness, rare in modern books, that is kept up consistently throughout, and a pretty picture of a perfectly happy little girl that gives the book distinction."—*The Sun.*

## This Is for You

Love Poems of the Saner Sort. Selected by WILLIAM S. LORD. Decorated cover, deckle edges, gilt top, $1.00 *net.*

An exquisite gift book for every one. The verse selected is of the sweetest sentiment and highest literary value. As complete a gift as it is possible to devise.

*"Since 'Bob, Son of Battle,' no better study of dog nature."—Outlook.*

## My Dogs in the North Land.

By EGERTON R. YOUNG. Illustrated and decorated. 12mo, cloth, $1.25 *net.*

"We are strongly tempted to characterize it as the best book about dogs that we have ever read. There are reasons in plenty for this judgment. We most enthusiastically commend the book to all dog lovers. It will delight them beyond measure."—*Syracuse Herald.*

# FLEMING H. REVELL COMPANY, Publishers

**NEW YORK, 158 Fifth Ave. CHICAGO, 63 Washington St. TORONTO, 27 Richmond St., W.**

Loyal to its Brilliant Past

THE

# Atlantic Monthly, 1903.

In Touch with Present Conditions

## LIFE OF THE AMERICAN CITIZEN

Current Experience and Character of the American of To-day.

The ATLANTIC will print a group of papers, describing, from fresh points of view, the influence of our present civilization and social surroundings upon the life of the "average man." Institutions as varied as the School, the Church, and the Stock Exchange, professions as far apart as the Law and the Trained Nurse will be discussed by competent writers. The first of these articles will be **THE SCHOOL**, by **President Eliot of Harvard.**

### My Own Story

JOHN T. TROWBRIDGE, one of the surviving contributors to the first number of the ATLANTIC, has written his autobiography under the felicitous title of "My Own Story." This gifted and prolific writer has led a life quite as attractive as his most stirring narratives.

### Sir Leslie Stephen

Sir Leslie Stephen, the eminent essayist, formerly editor of *The Cornhill Magazine* and *The Dictionary of National Biography*, is expected to contribute a group of reminiscent papers, dealing with English men of letters during the last half century.

## Serial Fiction.

### His Daughter First

By

Arthur Sherburne Hardy

*Author of "But Yet a Woman."*

The chief ATLANTIC serial of the year exhibits to the full the fine narrative genius of our present Minister to Spain. Its plot turns upon the love entanglements in a New Hampshire house-party and the complication of the New York money market. Mr. Hardy has never created more attractive characters or presented a truer picture of contemporary life.

### Daphne

**AN AUTUMN PASTORAL**

By

Margaret Sherwood

*Author of Henry Worthington, Idealist.*

Against a mellow Italian background the love story of a sensitive American girl and a mysterious pagan person is very attractively presented. It is told with so intimate a sense of the genial pagan spirit that it is fit to rank with such classics as Walter Pater's "Apollo in Picardy."

***SPECIAL OFFER***

**On receipt of 50 cents the publishers will send the ATLANTIC for three months to any new subscriber. 35 cents a copy; $4.00 a year.**

***Prospectus for 1903 on application.*** Upon request to all new subscribers, the November and December issues will be mailed free of charge, providing the remittance is received before December 20.

**Houghton, Mifflin & Company, 4 Park St., Boston, Mass.**

# CHOICE HOLIDAY READING

THE

# SPENDERS

33d THOUSAND

*By* HARRY LEON WILSON. Price $1.50. Six Illustrations by O'NEILL LATHAM.

"The Spenders" answers two demands made by intelligent readers. It is a handsome book in externals, with an artistic cover, attractive title-page, and striking illustrations by O'Neill Latham. And, inside, it is a graphic story of American life, full of memorable characters, picturesque incidents, and pungent dialogue.

# DOROTHY SOUTH

37th THOUSAND

*By* GEORGE CARY EGGLESTON Six Illustrations by C. D. WILLIAMS. Price $1.50.

That the taste of the general reading public is sane and wholesome is shown by the way this novel has sold. A more pleasing romance of Virginia before the war has not been written. The book is handsomely bound and finely illustrated, so that it makes a fitting holiday gift as well as a permanent addition to the library shelves.

LOTHROP PUBLISHING COMPANY, BOSTON.

# A History of Egypt

From the End of the Neolithic Period to the Death of Cleopatra VII., B.C. 30. By E. A. Wallis Budge, M.A., Litt.D., D.Lit. Keeper of the Egyptian and Assyrian Antiquities in the British Museum. *Illustrated.* In 8 volumes, cloth, $1.25 each.

**Vol. I. Egypt in the Neolithic and Archaic Period.**
**Vol. II. Egypt under the Great Pyramid Builders.**
**Vol. III. Egypt under the Amenembats and Hyksos.**
**Vol. IV. Egypt and Her Asiatic Empire.**
**Vol. V. Egypt under Rameses the Great.**
**Vol. VI. Egypt under the Priest-Kings and Tanites and Nubians.**
**Vol. VII. Egypt under the Saites, Persians and Ptolemies.**
**Vol. VIII. Egypt under the Ptolemies and Cleopatra VII.**

"The publication of this work, certainly the most complete and exhaustive English history of the Egyptian Kingdom from the earliest times which we possess, may be said without undue eulogy to mark an epoch in Egyptological studies in this country."—*Glasgow Herald.*

"A valuable, learned, and generally interesting popular survey of a field of erudition, the attractiveness and the promise of which are only now beginning to be at all widely revealed."—*Scotsman.*

"In these volumes we have a graphic history of the period written from a careful study of their monumental records that have survived the downfall of the nation. They are indispensable to the student of those ancient times, and will make the history of the Old Testament seem more real."—*Syracuse Messenger.*

"Will prove as pleasant reading to the general public, as they are valuable to the specialist."—*The Globe*, London, Eng.

"The work, while thoroughly scholarly in its narrative, has an easy, pleasant style, which will recommend it to those who are not specialists, and all classes will be grateful to the author for the voluminous index, map, and illustrations."—*The Standard*, London, Eng.

Some Life Studies of Animal Instincts and Animal Training By WILLIAM J. LONG

With 212 Illustrations by Charles Copeland

No book of its kind so fully and beautifully illustrated

Large sq. 12mo. Cover stamped in full gold. 380 pages. $1.50 net

BY THE SAME AUTHOR

**BEASTS OF THE FIELD** Large sq. 12mo. 344 pages. Beautifully bound and illustrated. $1.75

**FOWLS OF THE AIR** A companion volume to "Beasts of the Field." 322 pages. $1.75

Both books neatly boxed together, $3.50

**Ginn & Company, Publishers, 29 Beacon St., Boston**

IF YOU WANT TO KNOW ALL ABOUT Ex-Speaker Thomas B. Reed's great library of MODERN ELOQUENCE, and if you would like a handsome portfolio of specimen pages, including fine photogravure illustrations, address the publishers, JOHN D MORRIS & CO., 1163 Commonwealth Bldg., Philadelphia.

AUTOGRAPH LETTERS of FAMOUS PERSONS Bought and Sold. WALTER R. BENJAMIN, 1,125 Broadway, New York. SEND FOR PRICE LISTS.

WRITERS: We considerately examine, FREE, MS. copy submitted, 20,000 words upward, poetical, or short story compilations. Acceptable material published in cover. EASTERN PUBLISHING CO., BOSTON, MASS.

UNITARIAN PUBLICATIONS SENT FREE. Address M. C., Arlington Street Church, Boston, Mass.

# THE MACMILLAN NOVELS AND STORIES

**WILL BE FOUND MOST SATISFACTORY BOOKS FOR CHRISTMAS GIFTS**

F. MARION CRAWFORD'S

## CECILIA

**A Story of Modern Rome**

By the Author of "Saracinesca," "Via Crucis," "Marietta," etc., etc. 55th Thousand. Cloth, gilt. $1.50.

"A book to rank in originality and interest with his earlier successes."—*Phila. Press.*

"An excellent story, decidedly original . . . thoroughly interesting."—*Record Herald*, Chicago.

GERTRUDE ATHERTON'S

## THE CONQUEROR

**Being the true and romantic story of Alexander Hamilton**

By the Author of "Senator North," "The Aristocrats," etc., etc. 50th thousand. Cloth. $1.50.

"Certainly this country has produced no woman writer who approaches Mrs. Atherton."—*Post.*

"Mrs. Atherton has brilliant descriptive ability and power in characterization more virile than that of any American woman of letters."—*Boston Advertiser.*

*160TH THOUSAND.*

OWEN WISTER'S

## THE VIRGINIAN

**A Horseman of the Plains**

By the Author of "Lin McLean," etc. Cloth. $1.50.

"An uncommonly brilliant and fascinating story."—*The New York Tribune.*

MR. LUTHER'S

## THE HENCHMAN

A Story of New York Politics. Cloth, $1.50.

"A splendid story of modern politics."—*The Albany Law Journal.*

"Essentially a powerful story . . . and wonderfully realistic."—*The New York Times Sat. Review.*

Mr. MASON'S

## THE FOUR FEATHERS

By the author of "The Courtship of Maurice Buckler," "Miranda of the Balcony," etc. Cloth, $1.50.

"A good story . . . a romance which has many aspects and all of them beguiling."—*The New York Tribune.*

"An exceptionally good story . . . superbly told; told with real power. It really thrills you."—*Boston Herald.*

The JAMES K. HACKETT Edition of MR. CHURCHILL'S Novel

## THE CRISIS

Illustrated with scenes from the play based on it, and portraits of the actors. Cloth, 12mo, $1.50 net.

"One of the handsomest souvenir books that has been issued for a long time."—*News Letter.*

*FOR THE YOUNG FOLKS*

MRS. WRIGHT'S

## DOGTOWN

**Being Some Annals of the Waddles Family**

By MABEL OSGOOD WRIGHT, author of "Tommy Anne," "Wabeno the Magician," etc. Profusely illustrated from photographs. Cloth, 12mo, $1.50 net.

"'For all those who love children and dogs' as the dedication says. . . . There is more than dog story in this entertaining volume—there is dog-learning; nor is it surprising to find woodland and bird lore as well filtering through the pages."—*The Nation.*

ISABEL LOVELL'S

## STORIES IN STONE FROM THE ROMAN FORUM

Illustrated, chiefly from photographs. Cloth, $1.50.

"A model book of its kind . . . written for children, but we are much mistaken if college students will not learn as much from it as their younger brothers."—*New York Sun.*

"Both charming and valuable."—*Christian World.*

MISS DIX'S

## A LITTLE CAPTIVE LAD

By BEULAH MARIE DIX, Author of "Christopher Ferringham," "Soldier Rigdale," "Hugh Gwyeth," etc. Illustrated by WILL GREFE. Cloth, $1.50.

"No sweeter story has come from press this season."—*The Buffalo Express.*

"A refreshingly delightful . . . healthy book."—*Current Literature.*

"So engaging that it will make the boy who gets the book unwilling to come to meals until he has read it."—*The Cleveland Leader.*

HOMER GREENE'S

## PICKETT'S GAP

An illustrated story of a railway war for the right of way and of a boy's part in it. Cloth, 12mo, $1.25 net.

"Strong, true, wholesome and thoroughly interesting."—*Christian Endeavor World.*

"A rarely good boy's story, alive with incident and action."—*Outlook.*

"More than ordinarily good. . . . Interesting and well told."—*The Boston Herald.*

*WITH ILLUSTRATIONS IN COLOR*

Mrs. BANKS'

## OLDFIELD

**A Kentucky Tale of the Last Century**

*Sixth Edition, illustrated in color by Harper Pennington. Cloth gilt tops, $1.50 net.*

"A Kentucky Cranford" is the phrase most critics use in describing this charming idyl by Mrs. NANCY HUSTON BANKS, which Mr. Mabie calls "restful, Arcadian . . . not lacking its thread of romance and not without its thread of tragedy, but reposeful, tender and intimate."

*Send for the new Illustrated Christmas Catalogue, distributed without charge on request by*

*NEW YORK, THURSDAY, DECEMBER 4, 1902.*

## The Week.

It is something of a coincidence that Congress met on the very day that the International Shipping Trust went into operation. Senator Frye sees in this conjunction one argument more for passing the Ship Subsidy Bill. Here is this vast combine, willing to spend $50,000,000 on new steamers if Congress will only furnish half the money. The Maine Senator is no doubt in earnest, but if he makes such a proposal on the floor of Congress it will be received with shouts of laughter. A bill to pension Crœsus would have as good a chance of passing. Ship subsidies are dead, nor does it require a post-mortem to determine what killed them. Mr. Morgan did it with his little syndicate.

---

The Comptroller of the Currency, in his annual report, recommends that national banks be allowed to issue notes over and above the amount of their security bonds, beginning with 20 per cent. of their capital, and increasing gradually to 50 per cent. "A graduated tax on the amount issued," he says, "joined with ample provisions for their redemption and return to the issuing bank, would result in the necessary contraction when the circulation became redundant and the notes were not needed in business." This is very true, but it is also true that ample provisions for their redemption would produce this result without the graduated tax or any tax different from that which the law now imposes. Since the public pay for the use of all the notes they take out and keep out, they can be depended on to return all that they do not really need. All that they do really need they ought to have, and the Government need concern itself only with their goodness. The Comptroller's report is, nevertheless, a notable and helpful communication. It presents, in the way least likely to cause alarm, the arguments in favor of an "assets currency." While disclaiming any originality for the suggestions made under this head, the report is well timed to meet and support a growing public demand for a currency more responsive to the varying needs of business, especially those of the crop-moving season.

---

As was expected, Secretary Moody's first annual report makes an earnest appeal for more officers and men for the navy. Unlike his predecessor, he passes over the question of more ships with the moderate statement that he believes it to be his "duty to recommend a continuance without interruption of the increase of ships." The precise type of ships he is quite willing to leave to the wisdom of Congress. He is even ready to admit that there are "differences of opinion among naval authorities" upon this point, and therefore he thinks that two battle-ships will about fill the bill. This is in refreshing contrast to the perfervid appeals of his predecessor, whose insistence that the spending of $100,000,000 on battle-ships was the best possible use to which the money could be put in the interest of labor, made him a laughing-stock. Secretary Moody's latest tables as to the dearth of officers show that there will be a deficiency of 1,360 at the end of the next four years. Apparently, Mr. Moody and his fellow-advocates foresee an endless increase of ships and men. If we build two more battleships and a few more cruisers every year, we have no doubt that tables could be prepared showing that by 1910 we shall need 2,360 more officers to man our swollen fleets, and so on *ad infinitum*. If it is not time, as we think it is, to stop building more ships, it is at least time for our legislators to sit down and formulate a distinct policy, fixing definite bounds to our naval expansion and allowing the public to pass upon them.

---

Mr. James Breck Perkins, the historian, who is Congressman from the Rochester district, has been interviewed by the *Democrat and Chronicle* of that city on several subjects appertaining to his public duties, and among others that of the tariff. He says that he intends to introduce two bills at the opening of the session—one to repeal the duties on coal and meats, and the other to repeal those on hides and rough lumber, clapboards, and shingles. He doubts whether either of these bills will be passed at the short session, but he thinks that it would be good politics for the Republican party to pass the former of the two within a week after the session begins. Mr. Perkins is a protectionist, but says that he does not intend to be humbugged by names. A duty of 67 cents per ton on coal and of 5 cents per pound on beef is not protection, but an imposition on American laborers and manufacturers. "Sooner or later," he adds, "bills like these will be passed. If, while I represent this district in Congress, I can in any way contribute to reducing the price of the coal that burns in the stove, or lessening the cost of the meat that is cooked in the kitchen; can make it possible for the manufacturer to turn out his shoes cheaper, and the artisan to build his house for less money, I shall feel that I have been of some service to my constituents." Mr. Perkins is well qualified by training and reputation to become a leader of the advanced thought of the Republican party on this question.

---

The failure of the attempt to settle the anthracite dispute by direct negotiations shows that the matter was so complicated as to require the services of an impartial commission. That the pressure to carry out the arbitration by commission should come from the independent operators is also highly significant. These gentlemen are in a better position than the railroad mining companies to deal at first hand with their own workmen, while they gain correspondingly little from general agreements. Their belief that the whole anthracite situation should be presented before the special commission and given to the public will be generally shared, for no settlement of the dispute is likely to be permanent unless it has the approval of the public and is openly made on the basis of facts.

---

The sudden displacement of the Minister of Colombia at Washington and the appointment of the Secretary of Legation to take charge of the negotiations respecting the Panama Canal, point to an early adjustment of the questions at issue. It is said in explanation of Minister Concha's stubbornness on this subject that, in his view, the granting of perpetual control of the strip of land through which the canal must pass would be a violation of the Constitution of Colombia, which forbids the abrogation of sovereignty over any part of her territory. Of course, this is a respectable position for any government to take, and for any Minister to insist upon if his Government so holds. Yet that view seems somewhat incongruous with the power granted to the United States by treaty to keep the Panama Railway open, which power was exercised by us only a few weeks ago, when an American Admiral sent an armed force to remove obstructions to transit placed there by other armed forces. This was or was not an infringement of sovereignty, according to the viewpoint of the individual observer. If he is a strict constructionist he will say that it was; if not, not. But, in fact, this power was granted to us when the Panama Railway received its charter, and has been frequently exercised without protest from the Government of Colombia. Possibly the Constitution of Colombia has been changed since those powers were conceded to us. All these questions, however, seem likely to be settled satisfactorily, now that the Government at Bogota has taken them out of the hands of Mr. Concha. Secretary Hay seems

to have scored another victory of considerable importance.

---

The London *Daily News*, commenting on the situation in Venezuela, holds that if the United States is to have the privileges of the Monroe Doctrine, she should also have its duties, among which is that of preventing the South American republics from becoming a danger to the civilized world. The *Daily News* here shows a deficiency in the sense of humor which we have often noticed in the attempts of statesmen and publicists of the Old World to understand the Doctrine. The great merit of the Doctrine lies in the fact that its limitations have never been defined. Consequently, it is adapted to all sorts of emergencies. It is like the auctioneer's garment, "large enough for any man and small enough for any boy." It fits the case of Venezuela now just as well as it did seven years ago. At the present time, that country is higgling over her debts to England and Germany, relying on the United States either to give bail for her, or to prevent the creditors from collecting their money by seizing her custom-houses. According to the latest advices from Washington, we shall do neither. The Doctrine never made us responsible for the borrowings or pilferings of the transient governments of Central and South America. The only thing that could make us responsible for such claims would be an attempt on our part to prevent other nations from collecting what is due to them, and using such force as may be needful to that end. The question may be asked, What is due to them? Anything is due to them which they have our permission to collect. This shows the adaptability of the Doctrine to all possible cases.

---

The monetary situation in Mexico deserves the attention of the ex-Bryanites. Our gold dollar is worth $2.85 in Mexican silver. That is, the national money is cheap and plentiful. The planters, though probably ignorant of Gresham's law, rejoice at the prospect that the cheap dollar will stay in the country, and feel that the widening ratio of silver to gold is a matter which affects only the bankers and merchants of the cities. Thus a rudimentary division of the nation into "silverites" and "gold bugs" is already apparent. How long the agrarian classes will be delighted to receive more dollars which are progressively worth less in gold or in goods, remains to be seen. It always takes a certain time to discover the fallacy of high prices paid in a depreciated currency. But Mexican bankers and importers are under no illusions in this matter. They are already making gold contracts, and reckoning with a fluctuating foreign exchange. It will be interesting to see if this capitalistic preference for the yellow metal will not produce a Populistic movement in behalf of the dollar of the fathers. But the Mexicans have this advantage over ourselves, that, while the people are subject to all sorts of political aberrations, the Government will treat the monetary problem in the cold light of reason. Abraham and his four hundred shekels of silver are not likely to be cited before the Congress of Mexico.

---

We are much pleased with the "authoritative" announcement from Platt's friends in Washington that he is willing to abdicate on condition that his son Frank be elected in his stead. Why not? If the Senatorship is Mr. Platt's personal property—as he undoubtedly considers it to be—why should he not be allowed to make it over as a family heirloom to his dutiful son? Simon Cameron passed on the Pennsylvania Senatorship to his son Don, just as Quay is understood to be making ready to elevate his son Dick to our hereditary House of Peers; why should not Platt be entitled to do what he will with his own in similar fashion? The son could not be a more useless Senator than the father. He could vote as straight, be as dumb, and as eagerly grab all the patronage in sight. What more would New York have in the way of a representative? We fear, however, that even the Republicans in the Legislature are not yet disciplined to the point of swallowing everything bearing the name of Platt without gagging. Frank Platt has so publicly, and on so many occasions, displayed what Swinburne calls "facetious idiocy," that he would have to pay a thumping inheritance tax before being allowed to take over the Senatorship under his father's will.

---

Popular discussions on the stump during the recent campaign doubtless led many persons to suppose that the canal improvements in this State could be carried out forthwith, whenever one party or the other said the word. Those who gathered this impression must have been somewhat surprised, during the last few days, to learn that nothing like agreement exists on so important a detail as the route of the enlarged waterway. Of course, the questions of route must be settled before the people can be asked intelligently to pass upon the proposed expenditures, and it is really an encouraging circumstance that the serious consideration of this problem has begun. The decision lies between the lake route, which contemplates a use of Lake Ontario for a distance of 112 miles, terminating at Oswego, and the route across the State substantially following the line of the present Erie Canal. The advantages claimed for the lake route, which has been favorably reported on by State Engineer Bond, are less cost and smaller maintenance charges, besides shorter time required to traverse the canal. These claims undoubtedly have a substantial basis. Engineer Bond has estimated that the canal, by the lake route, could be improved to 1,000-ton barge capacity, and the present Erie and Champlain canals substantially enlarged at a cost of $60,000,000, which is $20,000,000 less than the cost of a similar canal over the present route. The estimated difference in time favorable to the lake route is thirty-five hours for barges and forty-five hours for propellers. With the use of Lake Ontario and also of Oneida Lake, there would be 195 miles of open waterway, requiring no maintenance whatever.

---

These arguments, though forcible, are by no means conclusive. The claims made for the route across the State are exceedingly strong. The lake route proposed would leave out Rochester and Syracuse altogether, besides many other smaller towns and cities which owe their importance in part to their positions on the line of the present canal. Side lines and feeders for the use of these centres would but lamely answer their needs. Buffalo, also, has reason to fear the lake route, and is emphatically against it. While it contemplates transhipment at Buffalo, and provides for the use of practically the present route from Buffalo to Lockport, it is quite likely that shippers might readily fall into the habit of sending their grain and other freight by steamer through the Welland Canal from Lake Erie to Lake Ontario and thence over the open lake to Oswego, there to tranship and enter the barge canal. This might be fine for Oswego, but it would arouse fear lest the enlarged canal might become a mere chute for the passage of freight to this port, without other benefit to the State. If it is true that local traffic should be an important feature of the improved canal (and it seems to us that it ought to be), the objections to the lake route deserve most careful consideration. Practically, also, the friends of the canal improvement project must take into account the political bearing of the two propositions. How can a route be adopted which is opposed by Buffalo, Rochester, Syracuse, and many other communities formerly counted as advocates of the canal improvements?

---

Much curiosity, and some perplexity, exist in regard to the Elevated and Subway merger. The question is asked, what the Subway enterprise has to gain by leasing the Elevated roads, on terms which are certainly very liberal. The 7 per cent. dividend to be guaranteed on Elevated shares is pledged to a property which has been paying only 4 for five years past, whose highest record has been 6, and whose capital stock is being heavily increased. The two undertakings will, of course, be competitors at

the completion of the Underground; they are, for the most part, parallel enterprises. Experience with this city's development has taught that inroads of new competition on the earnings of a local transportation enterprise will be only temporary; diversion of traffic to the new route is apt soon to be offset by pressure of increased traffic on both. But experience has also shown that shrinkage of the older enterprise's earnings may, in the interim, be severe. When the surface railways, in the nineties, extended their facilities and became, in fact, competitors for the Elevated's "short haul" traffic, each of the above-named principles was demonstrated. During the fiscal year 1893, the Elevated system carried 219,621,000 passengers, and earned $11,137,000. Yet within six years its passenger movement had declined to 177,204,000, and its earnings to $9,325,000. About that time, as residents of the city very well remember, pressure of moving population overflowed even the greatly expanded facilities of the surface lines, until, in the fiscal year just closed, passenger traffic on the Elevated had risen to the high-water-mark of 223,427,000, with earnings of $11,067,000.

---

It is announced, as one purpose of the pending merger, to mitigate the violence of this intervening shrinkage. How it can be done by the act of a management is not altogether plain. "Rate-cutting," the nightmare of other railway systems, plays little part in the Subway and Elevated plans; for the reason that rates per passenger are virtually fixed. Nor is it likely that competition can be modified by avoiding, on one line, train schedules which should draw patronage from the other. This question, too, is practically decided in advance for each. The probability is that the amalgamators have in mind possibilities of "splitting of fares" by one or the other company with the surface lines—or, later on, with railways, such as the Pennsylvania or the Central, whose terminals touch the local railway stations. This might conceivably be used as a weapon of competition. If this supposition be correct, it will be interesting to see how the general plan works out. The rather strong feeling in financial circles has been that close coöperation between the various local and outside transportation enterprices in the matter of travelling facilities is a certainty of the future.

---

If labor unions or any of their members have standing in court, there is no reason why they should not apply for the legal remedy of injunction, and in a proper case receive it, even though they are strikers and the injunction is sought to restrain their former employers. What lends novelty to the case of this kind at Vineland, N. J., is the fact that it indicates that at least the Glass Bottle Blowers' Association of the United States and Canada is willing to countenance "government by injunction" provided it be on their side. This association is seeking to restrain the Jonas Glass Company of Minotola, N. J., "from interfering with the business of the strikers." It is charged in the complaint that the company has attempted to intimidate, frighten, and drive away the labor association and its officers, that strikers who gathered at the railway station to meet incoming trains bringing non-union workmen have been assaulted with force of arms by persons hired by the company, and that representatives of the company have threatened to kill some of the strikers and to destroy the strike headquarters. The court, therefore, is asked to enjoin the company. An order to show cause has been granted. The proceedings on the return day will be watched with great interest.

---

Careful reviews of the work of Circuit-Attorney Folk, who has broken up the boodle ring in St. Louis, show that the two great qualities which have brought him his success are fearlessness and single-mindedness. His course and character are worth studying by reformers everywhere. "I told the men who nominated me that I didn't want the office," said Mr. Folk the other day, "for I felt that if elected the task for me would be tremendous. But I was elected, and I set about to do my duty as I saw it. I had to prosecute some of those very men who nominated me. Some of them are in the penitentiary, some are under bonds as indicted perjurers and bribe-takers." The best of this is that it is true, and it is also true that Mr. Folk has been able to convict not only the bribe-takers, but some of the wealthy bribe-givers as well. Some of the Missouri newspapers are nominating him for all sorts of offices, but it is quite clear that he has not been actuated by motives of political ambition. "I don't think I could be elected for another term,' he said recently, and added grimly: "Ninety-nine per cent. of the people are honest and want honest government, but, unfortunately, the remaining one per cent. are perniciously active." Though a Democrat, Mr. Folk is meeting the strong opposition now of the Democratic machine. Naturally, the Democratic leaders are not anxious to advance him, for he has promised them that if he gets a chance he will expose and punish the State boodlers as he has the corruptionists in St. Louis.

---

By an excellent provision in the laws of Indiana, a sheriff who allows a prisoner placed in his custody to be lynched forfeits his office. Gov. Durbin has acted promptly in the case of Sheriff Dudley of Sullivan County, who permitted, if he did not connive at, the lynching of a negro on November 20, and has notified him that he must turn his office over to the county coroner. The sheriff may, however, be reinstated if he proves that he was really powerless to prevent the outrage. Meanwhile, his friends assert that the delay in sending troops was the real cause of the disgrace. The Indianapolis *Journal*, in commenting on the affair, says that it had "all the features of a flagrant violation of the law," and adds that there "was no doubt of the prisoner's speedy trial, conviction, and punishment." By the Indiana law of 1901, assisting at a lynching is murder; and merely looking on is a crime punishable by not less than two or more than twenty-one years' imprisonment. The power and duty to prosecute were taken out of the hands of the local law officers and placed in those of the State's Attorney-General. The latter is expected to act at once in this case, which is the first under the new law. If Indiana can make examples of a dozen of these murderers, it will perform a great service for the entire Union, for its course in the matter will attract national attention.

---

Irish troubles, which recently looked at their worst, seem likely to be compounded temporarily through conference of the landlords and tenants. Mr. John Redmond has almost expressed confidence in the ability of the Government to deal successfully with the land question, and apparently the recent jailing of Irish editors and members of Parliament under the Crimes Act has been quite forgotten. The present good feeling is a favorable antecedent to the land-purchase bill which Mr. Balfour has promised to introduce at the next session of Parliament. It is quite natural that the Irish should look for practical relief rather to Mr. Balfour than to the disorganized Liberals. The stalwarts, under Campbell-Bannerman, have by no means made their attitude clear in this matter. That they are in favor of thoroughgoing legislation they insist, but this is after all a generality, and it would be difficult to pin the regular Liberals down to open advocacy of Gladstonian home rule. If their attitude is ambiguous, that of the Rosebery faction is doubly so. Its leader is irrevocably opposed to an Irish Parliament, but would see without concern a number of legislative bodies in Scotland, Wales, and Ireland, or even "one such body," in each of these portions of the kingdom—which seems like home rule under the sweeter name of "devolution of power," but may mean nothing at all except that Rosebery is in the mood of conciliation. Until the Liberals know their own mind on this subject and show signs of coming to their old strength, Mr. Redmond, and even his imprisoned colleagues, can hardly be blamed for looking to Mr. Balfour.

### CASTE AND ANTI-CASTE.

President Roosevelt's letter to a citizen of Charleston protesting against the appointment of a respectable colored man to the collectorship of that port as "an insult to the white blood," is a half-battle word. Publication of it is in wholesome conformity to Lincoln's sagacious use of this citizenlike mode of making known his policy—in wholesome contrast to McKinley's crafty avoidance of it. It is short, dispassionate, dignified, entirely frank; the manly expression of the President of the whole people. "I cannot consent," he says, "to take the position that the door of hope—the door of opportunity—is to be shut upon any man, no matter how worthy, purely upon the grounds of race and color." And again: "If, as you hold, the great bulk of the colored people are not yet fit in point of character and influence to hold such positions, it seems to me that it is worth while putting a premium upon the effort among them to achieve the character and standing which will fit them." This is worthy of Lincoln, and we know of no answer to it except the hoary Southern interrogatory, "Would you have your daughter marry a nigger?"

The President justly lays stress on his consistent attitude in this matter, both as Governor of New York and as Chief Magistrate. He has made, and is making, occasional appointments of worthy colored men to office, not questioning their equal claim to it with any worthy white man. He has always sympathized with the efforts within and from without the South to enlighten, elevate, and purify the great mass of manhood there imbruted by slavery. To this end he conferred, a year ago, with Booker Washington at his own table at the White House, and for this he was denounced in the Southern press in terms which we recorded at the time—"blunder," "crime," and "studied insult to the South" among them. He holds fast to the doctrine of the perfectibility of man, abhorrent though it be to every white Southerner, and means to judge his fellow-beings not according to the accidents of birth and descent and complexion, but on grounds of character such as won for Booker Washington an honorary degree from the college of the great Northern defender of the Fugitive Slave Law. Such judgments are not unknown even in the South, where we read from time to time of white attendance at the funeral of some black man who has extorted the respect of the entire community. The spectacle would be more edifying if it did not suggest the brutal apothegm, "There is no good Indian except a dead Indian."

Mr. Roosevelt properly makes light of his correspondent's holding up the bogey of a return of negro domination at the South. It is, however, true that the sting of that domination was not merely the travesty of government under the carpet-bag régime. It was also and peculiarly the sight of the black man not "in his place." Grant that his "place," as a consequence of the civil war, was no longer chattel slavery; that limbo was still one in which he could by no possibility be looked up to by the meanest, most illiterate, and most shiftless white. Southerners are proverbially fond of titles, military and civic and pay their wearers due respect on account of them—take off their hats to them, to use an allowable metaphor. Imagine their revolt at being put in the attitude of hats off to those expected for centuries to uncover to "white blood" in every relation. Northerners will in vain try to enter into the humiliation of having to ask one black office-holder for your daily mail, and pay your taxes to another, without being able to bring yourself to address either even as Mister. Nothing more curiously than this repugnance illustrates the Southern view of office, not as a service to the people who created and filled it, but as a social distinction. It was, in the old oligarchical slaveholding days, a distinction reserved chiefly for a very small portion of the whites; but, as a symbol, it is now cherished as the last which enables the most degraded white to hold his head above the most upright, best educated, and most prosperous colored man. The suffrage is tending to take a place beside it as such a symbol, but the solemn pledges of Reconstruction here retain some force to tolerate a negro vote, besides that usage has dulled the "insult" of the implication of social equality. Yet colored disfranchisement has grown to such an extent as to emphasize the shocking contradiction between it and Federal appointments to office like that of which the "prominent citizen of Charleston" complains to President Roosevelt. Can we keep the negro obsequious at the polls if we have to settle with him for import duties at the custom-house?

To the Southern "Never" opposed to a black career proportioned to talent, President Roosevelt's "open door" should be an epoch-making response. It might be if the Republican party had not practically thrown off all its old guardianship of the freedman. In view of the disposition of the Supreme Court towards the Southern Constitutional disfranchisement dodges, not to mention other familiar obstacles arising from our form of government, the party has perforce stayed its hand; but it has at the same time forborne to bear unremittingly its moral testimony. If it has not ventured to make reduction of Southern representation in Congress a standing plank in its platform, neither has it given voice there to its disapproval of the obliteration of the black vote. No universal outcry has arisen, either, against the creation of a select white Republican party at the South, by the so-called "lily white" movement, for collusion with which the President has just removed an internal-revenue collector in Alabama. In fact, there is no denying, as we might call Senator Hanna to witness, that the Republican party organization at the South has been fostered largely for its corrupt serviceability in gambling at Republican national conventions.

We must, therefore, applaud President Roosevelt's moral courage, both as regards the South and as regards his own political organization, the one of which he mortally offends, and the other conspicuously transcends. It is a quality which every one may cultivate in the quiet, and for which strenuousness affords no preparation—at least no necessary preparation. On this side we trust his example may bear fruit with the rising generation, more apt to enrol itself among his followers because of his showy and fussy manifestations. His just meed, however, is likely to be obscured in our present reaction from the moral exaltation of the anti-slavery struggle, and it may be left to the historian to single out this episode in Mr. Roosevelt's administration as the noblest and brightest jewel.

We cannot close our remarks on his letter in the Crum case without citing one more passage, of which we will not question the sincerity: "I do not intend to appoint any unfit man to office." This declaration is general, but contains an allusion to the especial necessity, when selecting colored men for appointment at the South, of not increasing the race odium by imposing misgovernment on a region where postmasters have been mobbed to death for no other reason than their color. No political debts can, if only in mercy to the incumbent, be paid there in bad coin. The late President McKinley, it is notorious, was not so scrupulous. But it would be a reproach to his successor to think him simply politic in the case of black appointments, and not governed by the fundamental principles of civil-service reform which he has so long professed and sought to put in effect. It is, then, all the more astounding that he should have made a white appointment in Delaware which subverts the policy affirmed above. He has not only appointed an "unfit man," professionally, but one whose political associations should have barred him out as peremptorily as his Charleston correspondent would have had his color preclude the choice of Dr. Crum for collector. If to be the friend, henchman, and tool of Addicks is not enough to disqualify, what becomes of the rule laid down? We fear the President has not read the moral of his own virtuous and most laudable action in South Carolina.

### THE PRESIDENT'S MESSAGE.

The President is to be praised for cutting down his message below the usual portentous length; but he could easily have substituted for the first column a simple "See my speeches and books, *passim*." Passing, then, to the really significant parts of the message, there are three subjects upon which public attention will be fixed. About them debate has centred since Congress adjourned; they figured largely in the November elections; over them future political battles are expected to rage. What has the President to say about these burning questions? How does his present attitude toward them compare with the one he held a year ago, and with the position he has since taken in his public utterances?

In the matter of Cuban reciprocity, we have to note a distinct lowering of tone, on the President's part, since last December. Then he boldly urged Congress, "by every consideration of honor and expediency," to pass a bill "providing for a substantial reduction in the tariff duties on Cuban imports into the United States." Such a measure was put before Congress, bitterly fought, and finally defeated. President Roosevelt, however, went to the country, or was understood to go to it, and said that the bill would be passed in the present session "sure as fate." But now he has quietly abandoned that whole plan. All that he says is that he "hopes" soon to submit a Cuban reciprocity treaty to that graveyard of reciprocity treaties, the Senate, and that he urges its ratification as a way of "stretching out a helping hand to a weak sister republic." Not a word about being bound by "honor"; above all, not a word about a reduction in the tariff duties for Cuba's benefit. No wonder that Senator Hoar is certain there will be no legislation in behalf of Cuba this winter. The President's Cuban sword has grown rusty and lost its edge.

We are bound to believe that Mr. Roosevelt's heart is in his policy of regulating Trusts, yet even here he is singularly vague and inconclusive. He does not specify a single definite evil or name one precise remedy. It is true, he refers Congress to the recommendations of his former message—which were, in a general way, publicity and national supervision—but they are pretty well forgotten by this time. Nor is the memory of them likely to be sharpened by the President's careful balancing now on both sides of the question, and his final recommendation—in language as futile and evasive as that which President McKinley used about the Trusts, and which they read and then went off chuckling—that Congress pass "a law *reasonable in its provisions and effective in its operations*." That will not frighten anybody. This entire part of the message will, in short, be taken as an effort to qualify and minimize the President's previous deliverances on the subject of Trusts. Attorney-General Knox's speech at Pittsburgh was worth a dozen of it for directness, lucidity, and vigor.

Our dislike of the sections of the message which refer to the tariff is not due to the fact that we do not agree with the President's opinions, but rather to the fact that it is so difficult to make out what those opinions are. He talks like a man who has had contradictory views strongly urged upon him, and has accepted them all in the most catholic spirit. His first proposition is that tariff reduction is no remedy for Trust monopoly. We regard this both as unsound and as a particularly unfortunate thing for a President to say who asserts that he is determined to curb monopoly. Removal of tariff duties on Trust-made articles is at least a remedy, and for the President to push it aside necessaril throws a cloud upon the sincerity of his whole position. But he goes on to argue that the tariff should not be meddled with, since it is so important to maintain "economic stability." So far we can understand him. He is on the ground occupied by high and dry protectionists like Senator Hale, who says it is sacrilege to touch the tariff at all. But what does the message do next but go on to suggest several ways in which the tariff might be and should be amended!

To bring out this inherent confusion, we arrange the President's propositions in order:

(1.) The tariff should not be changed.
(2.) One way in which it should be changed is by means of reciprocity treaties.
(3.) If the reciprocity idea does not apply, then there may be "a lowering of duties on a given product."
(4.) If a "given rate of duty does promote a monopoly which works ill, no protectionist would object to such reduction of the duty as would equalize competition."
(5.) "In my judgment, the tariff on anthracite coal should be removed."

If any man can detect an underlying philosophy, a clear grasp of the subject as a whole, in President Roosevelt's declarations about the tariff, he can do more than we, with the best will in the world, are able to. Our feeling, as we read, is like that of the man who listened to a plagiarized sermon, and commented on the various passages, "That's South. That's Taylor. That's Blair." In like manner we find ourselves involuntarily saying, as the President's conflicting proposals pass before us, "That's Hanna. That's Spooner. That's Cummins. That's Babcock." But nowhere do we find Roosevelt himself, nowhere the true leader with definite convictions and a settled policy. The President seems, in other words, to have listened amiably to various influential requests to "put in" things about the tariff, and to have put them in, whether they eat each other up or not. The sounding of such an uncertain trumpet cannot lead to any serious preparations for battle. A hesitant message points the way, we fear, to a wasted session.

### SECRETARY ROOT'S REPORT.

Secretary Root returns to the subject of a General Staff for the army undeterred by the prevailing impression in Washington that this Congress has no thought of accepting the plan. It may be his belief that Gen. Miles's absence from the country makes this an especially fitting time to nail his colors to the mast. He has, at least, done so with his usual ability. Were Congress to put aside the traditions of the War of the Rebellion and to judge of this matter in the light of modern experience and needs, the General Staff Bill would go through with a rush, despite the personal hostility of the superannuated chairman of the Senate Military Committee, and others like him.

It is a simple business proposition which Mr. Root is advocating. No head of any great enterprise would undertake an important mercantile operation, calling for the expenditure of large sums of money, without first surveying the field and making all possible preparations in advance of the hour set for the undertaking. Everything would be so arranged that the mere pressing of a button would set a corps of experts at work executing well-thought-out plans and policies. Secretary Root asks only that thirty-seven experts be given him to prepare for the event of hostilities. They are not to be permanently detached from the line, but to return at the end of four years. During their detail they are to "look, hear, and think" for the whole army. They are to "consider the military policy of the country, and prepare comprehensive plans for the national defence and for the mobilization of the military forces in time of war." They are to do this privately and quietly and without flourish of trumpets.

For Congress to refuse to provide this General Staff would be for it to vote in favor of the total lack of foresight, and the chaos and disorder, of the Spanish war, as a result of which large numbers of men perished unnecessarily. Without a General Staff, the important reforms already achieved by Mr. Root—the War College, the Service and Post Schools, the interchangeable staff and line, the promotion of distinguished officers—will lose much of their effectiveness. Save for the War College, the great educational system into which Secretary Root is transforming the army in accordance with European standards will be without a proper apex. But Secretary Root strives to allay a silly national prejudice by stating frankly that he desires neither a Ger-

man nor a French General Staff, but a body of men selected and organized in our own way. Provided the work can be done by efficient men, their title and their organization count for nothing. Mr. Root more than offsets Gen. Miles's opposition to the plan by a most effective quotation from Gen. Schofield. There is, indeed, nothing valid now to be said on the other side of this question.

Upon the necessity of an educational transformation, Secretary Root again dwells at length. Barring service in the Philippines, the army has returned to peace conditions. Nearly the entire body of lieutenants is made up of new and untrained men, many of whom are mentally and physically not up to the standards of 1898. If our future generals and colonels and staff officers are to be worth having, this new material must be digested and assimilated. In order to this, Mr. Root has sent nearly 140 officers to the service schools, and is concentrating the troops in as large posts as possible, having wisely decided that small posts make for increased cost and for military indolence. Doubtless Mr. Bryan will claim credit for the Secretary's determination, "so far as practicable, to get the army posts out of the cities and large towns." There are adequate enough reasons in Mr. Root's desire to move the men away from evil surroundings, and to obtain more room for drills, on a large scale, without turning to political motives and fear of the labor vote for an explanation. It is needless to say that the bulk of the troops will still be kept near railroad and strategic centres, in order that they may be moved quickly and efficiently in emergencies. In this connection, it is interesting to note that Secretary Root's annual appeal for the beer canteen, is, in short, an affirmation that the present law makes for the physical and moral deterioration of the men—although the law, as we have frequently pointed out, has had only a brief and unfair trial.

Turning to the militia, Secretary Root renews his advocacy of the Dick militia bill, which passed the House at its last session, and which is quite likely to become a law, despite the rush of business. Briefly stated, the fundamental idea of the bill is to recognize the value to the national Government of the militia. If passed by Congress, the military force of the United States will be as follows:

First. The regular army, capable of enlargement by the President, when he sees war coming, to 100,000.

Second. Such of the organized militia (already trained as a national guard, and just as valuable, when used in the manner hereinafter indicated, as any other troops) as the President shall see fit to call into the service of the United States for not exceeding nine months, to repel invasion.

Third. A first volunteer reserve, composed of such companies, troops, and regiments of the organized militia already trained as a national guard as volunteer by organizations with all their officers and men.

Fourth. A second volunteer reserve, composed of men previously enrolled and having previous military training in the National Guard, the regular army, or the volunteer army, and commanded by officers whose fitness has been previously ascertained by practical tests under the provisions of the militia act.

Fifth. Such further volunteers as it may be necessary to call forth from the States, according to their respective quotas, and commanded by regimental officers appointed by the Governors of the States.

Mr. Root estimates that there will be from 250,000 to 300,000 troops of some military training available under the first four classes—a number more than large enough to supply all the country's needs under any conceivable circumstances save civil war. The present antiquated organization makes for inefficiency even when the State troops are called out for State purposes, as was shown only too clearly in Pennsylvania during the coal strike. Moreover, the bill increases the military resources of the United States along historic and American lines by enlarging the citizen soldiery, as opposed to the standing army with its manifold evils. It will add no little to Mr. Root's prestige should this bill become law.

## *CURRENCY QUESTIONS FOR CONGRESS.*

Dispatches from Washington betoken a revival of interest among Congressmen in banking questions, and especially in the branch of it commonly called "assets currency." This renewed interest is perhaps a consequence of the recent action of the American Bankers' Association at New Orleans, providing for the appointment of a commission of seven representative citizens to report changes in our banknote system for the future consideration of the bankers themselves and of Congress. The action taken at New Orleans derives its chief importance from the fact that the bankers have generally been the most conservative class in the nation in the views which they have held on this subject. They have been the ones most opposed to change, and most steadfast to prevent any deterioration in the value of the money, whether metallic or paper, which passes from hand to hand and forms the basis of all credits and the key to all business transactions. As they are required to receive in payments to themselves all national bank notes issued, they have the strongest possible motive for keeping the currency in a sound condition. The risks which they run from an unsafe currency are greater than those incurred by any other class; their knowledge of what is unsafe is better than that of any other; and it may be affirmed that any system of note issues to which they give their assent may be safely accepted by other members of the body politic.

The capital of the national banks is now something more than $700,000,000, but their circulation is only $330,000,000, or less than one-half the amount authorized by law. In 1881, that is, twenty-one years ago, the volume of circulation was about the same as it is now. In 1890, midway between the two periods, it was as low as $122,000,000. Special inducements have been offered by successive Secretaries of the Treasury to the banks to increase their circulation, but with indifferent success. When Congress, in 1900, changed the law so as to authorize the issue of notes to the par value of the deposited bonds, there was an immediate and large increase of circulation, showing that whenever the banks could make a profit by issuing notes they were quick to do so.

The scarcity and increasing price of Government bonds is usually assigned as the reason why banknote circulation does not keep pace with the growth of bank capital, of business, and of population. That this is an influential factor in the case is quite evident, but if the bonds could always be obtained at par, the banker would still be obliged to invest $105 in order to get $100 of circulation—the extra $5 being in the redemption fund at Washington. Let us take the simple case of a bank with $100,000 capital, which invests $90,000 in bonds at par, by means of which it gets an equal amount of circulating notes. It deposits $4,500 in the redemption fund. It then has $95,500 to do business with, provided all the notes can be kept out all the time, but in point of fact they cannot all be kept out. More or less of them will be returned to the bank as deposits. More or less will be sent to Washington for redemption, and the express charges must be paid by the issuing bank. The bank must also pay the cost of printing the notes, and of replacing worn and mutilated ones with new ones.

Banks use their capital as a foundation for credits, which they advance to their customers in the form of loans, to the amount of three or four dollars of credit for one of cash. The capital and surplus of the national bank is about $1,000,000,000, and their investments in interest-bearing securities is three and one-half times as great, or $3,500,000,000. They get the same percentage of profit for the use of their credit as for the use of cash. The bank exchanges its well-known credit for the less known credit of its customers, and keeps a reserve proportioned to its liabilities, but the reserves cannot consist of banknotes, in whole or in part. In the case considered above, the bank has $5,000 less money to do business with than it would have had if it had refrained from issuing notes, and this $5,000 might be made the basis of $15,000 to $20,000 of loans. In other words, a bank not issuing notes would have an advantage of that amount over a note-issuing bank, which would be off-

set, however, by the interest on the security bonds in the Treasury, which is in turn offset in part by the tax on circulation and various incidental expenses. The highest rate of profit obtainable on $100,000 of circulation in excess of the amount obtainable from direct use of the same sum of money where the 2 per cent. bonds are used as the security, amounts to $796 only. This profit is too small to be attractive to banks of large size, even if bonds of this class were still available, as they are not.

The deadness of the national bank circulation, its tendency to diminish rather than to increase or keep pace with the growth of population and trade, has led to the proposal, now advanced at Washington, to accept State and municipal bonds as security for banknotes. This idea derives some support from the fact that the Secretary of the Treasury recently accepted such security for deposits of Government funds in national banks. As a tentative step toward liberalizing banknote issues, this change might be admissible, but it would not furnish any real relief from the hide-bound system which prevents banks from making use of their credit in the form of notes, as is done in nearly all civilized countries.

It is evident that the agitation in behalf of a more flexible currency has made a lodgment in the higher official circles at Washington. It is reported that the Secretary of the Treasury himself is among the number of those who are prepared to take a step in the direction of assets currency—a currency based upon securities in the control of the banks instead of the Government. If this rumor proves to be correct, it will at once bring on a discussion of methods for reaching that result. And thus the approaching session is likely to be a fruitful one, at least in the way of preparing the public mind for currency reform.

*THE STANDARDIZATION OF SPORT.*

Readers of a certain age will remember a book (which is still sought by collectors in the earliest, and read by children in the latest editions) entitled 'Science in Sport Makes Philosophy in Earnest.' In it children are led by a series of experiments and observations presented as games, to ponder upon the laws of the universe—that is, in the nomenclature of a pre-scientific era, to become adepts in "natural philosophy." This feeling, that sport should in some fashion serve the cause of philosophy, has led the radical golfers of England to approach Mr. Balfour on the matter of the codification and emendation of the rules of that ancient but ill-regulated game. As a lifelong golfer and a recognized philosopher, the Prime Minister could not fail to give the matter his careful attention, and the petitioners an explicit answer. He appears, in his reply, as the advocate of individualism and the opponent of standardization. He writes:

"I should view with great apprehension the introduction into golf of so great a novelty as that of the standardization of the implements to be used by the player. Such standardization cannot logically be restricted to the balls, and it would be a pity, I think, to destroy the practically unlimited freedom of selection, which, among all games, belongs, so far as I know, alone to golf."

The merriment of Opposition editors and non-golfing politicians over Mr. Balfour's dictum seems misplaced when it is remembered that his plea for individualism in his favorite sport falls in happily with Herbert Spencer's attack upon the general "regimentation" of society, in his latest volume of essays. But, of course, Mr. Balfour had primarily in mind the interests of sport. It is indeed anomalous that a man is never so bound by rule and custom as in his playtime. Nobody may force him to conduct his business correspondence in one way rather than another, or to keep a card catalogue rather than an address book; but so soon as he boards a yacht, mounts a horse, or handles a ball, he comes under a Draconian code which prescribes his goings and comings, the implements he uses, and the very clothes he wears. Where written rules do not bind him, a mysterious "good form" hampers his natural movements, and in many respects he becomes the slave of his recreations. The Virginia breeder who lately appeared at the Horse Show in such housings as he wears on his own farm, showed some deficiency in sense of the fitting, but he also showed a courage which his perfectly appointed associates in the Show might well envy.

Probably sport has never been more free from this formalizing tendency than society at large. We read in romance that the youthful Tristan once landed at Cornwall and came upon the end of a stag hunt. The nobles were quartering the carcass in some barbarous fashion. Tristan indignantly seized the knife and made the division according to the ancient rules of venerie, giving to each his part, from the chief of the hunt to the dogs, and thus good hunting customs were introduced into Britain. The process constantly repeats itself. In our own day we have seen old-fashioned "rounders" develop into baseball, with an elaborate legislative code and a body of diplomatic and judicial practice which covers every point of the eligibility, transfer, and even the sale of players. Football has gone very much the same way. Changes in the game and charges of false play are discussed with conciliar gravity. Even polo has renounced the advantages of its Oriental (consequently vague) origins, and the prominent clubs of England and America are considering a plan for abolishing the few distinctions that mark the play of the two nations. As for yachting, the dispute between Mr. Lawson and the New York Yacht Club is still a malodorous memory, and a signal instance of the dangers that attend the standardizing of manly sport.

So far as uniformity is in the interest of the sport itself, no sensible person will oppose his personal preference to the common utility. But very often the motives that lead to the adoption of the $x$-ball, the $y$-bat, or the $z$-target are by no means disinterested. Frequently the profit of a particular dealer rather than the convenience of the player guides the choice, while if the standardization of sporting "togs" were deeply probed, there can be no doubt that natural selection would vanish behind the bland and persistent terrorism of the tailors of our generation.

In fishing, shooting, and golf the individual still makes a certain stand against the game. An unwritten law tells him what is sportsmanlike, and for the rest—clothes, tackle, and minor matters of deportment—he does as he lists. In bespeaking this wholesome irregularity for the game of golf, Mr. Balfour has shown himself no less a sportsman than a philosopher. He remembers that favorable evolution depends upon the arising of favorable variations, and that an absolute rule of uniformity would first retard and finally stay the evolutionary process. This is true of games, and it is true of society at large. So, when the formalists fret over new balls of marvellous carrying qualities, and rage at those two-handed pneumatic engines which masquerade as golf clubs, and seek to reduce the game to rule and measure—the truly philosophical, golfers or otherwise, will welcome these uncouth contrivances as the sign that in one game at least the individual is free to face unterrified the overt tyranny of rules and the more subtle oppression of "good form." The golf-links of the land remain individualistic oases in an age of universal regimentation.

# Correspondence.

"LYNCH LAW."

To the Editor of The Nation:

Sir: The subject of lynching has a threefold interest—historical, etymological, and practical—and deserves to be treated at length; but the material already collected by the present writer is so extensive that only an outline can be given here. There are various conjectures as to the origin of the term, no one of which is wholly satisfactory. In *Niles's Register* for August 8, 1835, it was stated that the practice arose "many years ago" in Washington County, Pa., and that the party which held an impromptu trial of a poacher "proceeded to try him in due form, choosing one of their number, a farmer named *Lynch*, to be

judge" (xlviii. 402). Nothing further is known of this alleged farmer. Lynch law is also variously stated to have derived its name from James (or Walter) Lynch, Mayor (or Warden) of Galway in 1491; from a man named Lynch who is said to have been sent to America in 1687-88 to suppress piracy; from John Lynch, for whom Lynchburg, Va., was named, and from Charles Lynch of Virginia (a brother of John). Of these, the only one whose claims deserve serious consideration is Charles Lynch. For a fuller and more accurate account of him than can elsewhere be found, the reader is referred to an article on "The Real Judge Lynch," by T. W. Page, in the *Atlantic Monthly* for December, 1901 (lxxxviii. 731-743). Charles Lynch was born in 1736, he was a justice of the peace both before and after the outbreak of the Revolutionary war, in 1780 he illegally fined and imprisoned certain Tories, in 1782 an act passed the Virginia Assembly holding him and others indemnified for suits brought on account of such illegal acts *(Va. Statutes*, xi. 134-5), and he died in 1796. Unfortunately, Professor Page assumes but does not prove the connection between Charles Lynch and lynch law. Other derivations of the term have been suggested. Meanwhile, what are the facts in regard to the history of lynch law? The following extracts briefly indicate this history from the earliest known appearance of the term down to 1850:

"In the year 1792, there were many suits on the south side of James river, for inflicting Lynch's law." 1817, Judge S. Roane, in W. Wirt's *Life of P. Henry* (1818), p. 372. In a note (but whether written by Roane or by Wirt is uncertain) we read: "Thirty-nine lashes, inflicted without trial or law, on mere suspicion of guilt, which could not be regularly proven. This lawless practice, which, sometimes by the order of a magistrate, sometimes without, prevailed extensively in the upper counties on James river, took its name from the gentleman who set the first example of it."

"Two years ago, a young Yankee, of the name of Williams, became the object of a malicious prosecution here, on suspicion of robbing a store. Circumstantial evidence of the worst kind only could be adduced, and he was, as is common in this country, acquitted. The people of the place, however, prejudiced against him, as a Yankee, deputed four persons to inform him, that unless he quitted the town and state immediately, he should receive Lynch's law, that is, a whipping in the woods. He departed, with his wife and child, next day, on foot; but in the woods, four miles from Princeton [Indiana], they were overtaken by two men, armed with guns, dogs, and a whip, who said they came to whip him, unless he would confess and discover to them the stolen money, so that they might have it. He vainly expostulated with them; but, in consideration of his wife's entreaties and cries, they remitted his sentence to thirteen lashes. . . . This poor fellow was of respectable parents at Berlin, in the state of New York. . . . He quitted the state, and returning, soon after, to prosecute his executioners, died at Evansville, before he had effected so desirable an object." 1819, Nov. 29. W. Faux, *Memorable Days in America* (1823), pp. 304, 305. On Dec. 27 Faux met the widow of Williams (p. 326).

"Among the early settlers there was a way of trying causes, which may perhaps be new to you. No commentator has taken any notice of *Linch's Law*, which was once the *lex loci* of the frontiers. Its operation was as follows: when a horse thief, a counterfeiter, or any other desperate vagabond, infested a neighbourhood, evading justice by cunning, or by a strong arm, or by the number of his confederates, the citizens formed themselves into a '*regulating company*,' a kind of holy brotherhood, whose duty was to purge the community of its unruly members. Mounted, armed, and commanded by a leader, they proceeded to arrest such notorious offenders as were deemed fit subjects of exemplary justice; their operations were generally carried on in the night. Squire Birch, who was personated by one of the party, established his tribunal under a tree in the woods, and the culprit was brought before him, tried, and generally convicted; he was then tied to a tree, lashed without mercy, and ordered to leave the country within a given time, under pain of a second visitation. . . . Whenever a county became strong enough to enforce the laws, these high-handed doings ceased to be tolerated." 1828, Judge J. Hall, *Letters from the West*, pp. 291, 292.

"'Lynch's law.' We have heard, that capt. *Slick* summoned his corps the other night, and obtained possession of a man with whose misdeeds they had become familiar, carried him to the prairie near town, and administered 'Lynch's law' upon him in fine style. He received about fifty lashes—and was ordered to decamp. The offence consisted in cheating at the gambling table." 1833, Oct. 5, *Niles' Register*, xlv. 87. This was at St. Louis.

"He was, therefore, for tying the young Indian to a tree and giving him a sound lashing; and was quite surprised at the burst of indignation which this novel mode of requiting a service drew from us. Such, however, is too often the administration of law on the frontier, 'Lynch's law,' as it is technically termed, in which the plaintiff is apt to be witness, jury, judge, and executioner, and the defendant to be convicted and punished on mere presumption." 1835, W. Irving, *Tour on the Prairies*, pp. 41, 42.

"In Natchez, negro criminals only are thus honoured—a 'coat of tar and feathers' being applied to those white men who may require some sort of discipline not provided by the courts of justice. This last summary process of popular justice, or more properly excitement, termed 'Lynch's law,' I believe from its originator, is too much in vogue in this state." 1835, J. H. Ingraham, *The South-West*, ii. 185, 186.

"Warwick, the murderer of Mr. Fisk, . . . was tried this week at Fayette [Miss.]. On account of some technicalities of the law failing to be observed, the prisoner was discharged. He had no sooner, however, emerged from the court house, than he was stripped of his clothing, and a plentiful coat of *tar* and *feathers* applied to him. He was afterwards whipped until almost insensible to pain; and to restore his feeling senses, we understand, a large quantity of spirits of turpentine was poured upon him. . . . It is said that during the execution of judge Lynch's sentence, the culprit frequently begged to be shot, but was told that such a death was too easy for him." 1835, Aug. 8, *Niles' Register*, xlviii. 397.

"We mentioned above that P. C. Damewood had been discharged; but no sooner was he out of the view of the court, than apprehending judge Lynch's law, he put out in a hurry. He was pursued and caught, and received a very decent flagellation. . . . There was some defect in the indictment, which the high court of errors and appeals was compelled to regard, but which the advocates of judge Lynch's court thought proper to rectify, and Mr. Damewood's back bears evident marks of the supremacy of Lynch's law." 1835, Aug. 22, *ibid.*, xlviii. 436.

"I suppose you have heard of the presentation of a stout gallows to me, at 23 Brighton Street, Boston, by order of Judge Lynch. It was destroyed by the city authorities. . . . The slave States continue to be excessively agitated. They appear to have organized Vigilance Committees and Lynch Clubs in various places." 1835, Sept. 17, W. L. Garrison, in *Life* (1885), i. 519. Garrison refers to the erection before his house of a gallows on the night of Sept. 10, bearing "on the cross bar . . . an inscription, *Judge Lynch's Law.*"—(*Boston Advertiser*, Sept. 12, p. 2/4.)

"Our village [Kanawha Salines, W. Va.] was thrown into considerable commotion on Friday morning last in consequence of the arrival of judge Lynch among us. His business was soon ascertained, and by his authority four white men from Ohio, . . . were soon arrested and tried before 12 intelligent persons of our county, for endeavoring to persuade several slaves to leave their masters, for some free State. . . . These congenial spirits of Garrison, Tappan & Co. were arrested in the neighborhood of our village, tried, condemned, and received the sentence pronounced on them by the jury. That is to say, Joe Gill and the elder Drake to receive nine and thirty lashes each, and leave the county in 24 hours; the younger Drake, with Ross, to be discharged for want of evidence, but with a promise from them that they would also quit the county in 24 hours. The evidence . . . produced an unanimous verdict on the part of the jury, that two should be *Lynched* and the other two excused, provided they would leave this part of the country." 1835, Oct. 3, *Niles' Register*, xlix. 76, 77.

"*A tale of terror!* We learn from St. Louis that . . . the negro was then secured and committed to prison, but . . . he was delivered to the mob, who conveyed him to the outskirts of the city, placed a chain round his neck and a rope round his body, and fastened him to a tree a few feet from the ground, when they then placed fire round the tree and literally roasted him alive!" 1836, June 4, *ibid.*, l. 234.

This was the famous case, date of April 28, which the Rev. E. P. Lovejoy censured in his *Observer*, along with Judge Lawless's removing it from the grand jury on the ground that the law could take no cognizance of the acts of a frenzied multitude. In consequence, Lovejoy was forced to remove his paper to Alton, Ill., but not before the St. Louis mob gutted his printing-office. His subsequent mobbing to death in Alton is well known.

"On this night it appears that some personal friend of Mr. Brux, who had been killed by Giquel, in company with several other individuals, feeling exasperated at the release of Giquel, and the judge who had been the author of it, proceeded to the residence of judge BERMUDEZ, with a view *to Lynch him*, or to inflict *some severe punishment upon his person.*" 1836, Oct. 1, *ibid.*, li. 69.

"We have been informed that the slave *William*, who murdered his master . . . was taken by a party, a few days since, from the sheriff of Hot Spring [Ark.], and burned alive! yes, tied up to the limb of a tree, a fire built under him, and consumed in slow and lingering torture!" 1836, Dec. 31, *ibid.*, li. 275.

"At the same hour when the customary sins of the slave-market were being perpetrated, hundreds of the little people of Charleston were preparing for their childish pleasures, . . . ministers of the gospel were agreeing to deprive persons of colour of all religious education: a distant Lynch mob was outraging the person of a free and innocent citizen." 1838, H. Martineau, *Retrospect of Western Travel*, ii. 87.

"The Lynch law of the present day, as practised in the States of the West and South, may be divided into two different heads: the first is, the administration of it in cases in which the laws of the States are considered by the majority as not having awarded a punishment adequate, in their opinion, to the offence committed; and the other, when from excitement the majority will not wait for the law to act, but inflict the punishment with their own hands." 1839, F. Marryat, *Diary in America*, iii. 232, 233.

"Forty years ago, the practice of wreaking private vengeance, or of inflicting summary and illegal punishment for crimes, actual or pretended, which has been glossed over by the name of *Lynch's Law*, was hardly known except in sparse, frontier settlements, beyond the reach of courts and legal proceedings." 1839, *Southern Lit. Messenger*, v. 218.

"*Lynchers punished—A good example.*—In Yazoo, Miss. some time ago, a Mr. Harris, for some real or supposed offence, was severely lynched by H. W. Dunn, C. W. Bain, and others. He prosecuted those two individuals for the outrage, and the case was tried at the late session of the circuit court of Yazoo county. The jury returned a verdict for the plaintiff of $20,000." 1839, June 15, *Niles' Register*, lvi. 256.

"LYNCHING. A singular act of lynching was perpetrated recently at the Oberlin theological institute, of Ohio. Some of the members . . . secured the man's person, gagged and blindfolded him, and then inflicted 25 lashes on his bare back with a cowhide. They then directed him to leave

the town forthwith, without going to his room." 1841, Jan. 9, *ibid.*, lix. 304.

"The citizens of our border country have witnessed these men under the name of regulators and moderators, committing in the territory of Texas some of the most barbarous cruelties of the nineteenth century. . . . We are aware that . . . among the more wise and better informed, impressions are almost established permanently, that Arkansas is a place where no law is recognized but *Lynch law*, and no rights acknowledged unless maintained by brute force." 1841, Nov. 6, *ibid.*, lxi. 149, 150.

"It is reported that the two men named Redman, brothers, with five others, were recently arrested in the vicinity of Davenport, charged with the murder of Colonel Davenport. Suspicion was strong as to their guilt. We have heard rumors that Lynch law had been inflicted upon both the Redmans since their arrest—that they both were hung." 1845, Oct. 25, *ibid.*, lxix. 115.

"Yet outrages the most terrible succeed each other rapidly:—men are lynched and stabbed and shot with as little compunction as you would feel in spitting a goose! . . . The other class . . . were then either lynched and warned to leave the county in so many days, or else shot if they persisted in remaining!" 1845, *American Rev.*, i. 121, 122.

"I expressed my horror at these transactions, observing that Florida, if in so rude and barbarous a state, ought not to have been admitted into the Union. My companions agreed to this, but said they believed the man had fair play on his trial, and added, 'If you were a settler there, and had no other law to defend you, you would be glad of the protection of Judge Lynch.'" 1846, Sir C. Lyell, *Second Visit to the U. S.*, ii. 32.

"The system of 'regulators,' and their ever concomitant opponents, the 'moderators,' WILL NOT DO, and as soon as two regularly organized parties are found to exist, it is the part of every wise man —who has due regard for his life and peace—to move, at any sacrifice." 1850, *American Rev.*, xi. 462.

From this evidence and from other material in my possession, it appears that the original term was "Lynch's law"; that this was soon shortened to "Lynch (or lynch) law," and then to "lynch"; that originally lynch law was a whipping or other personal chastisement; that lynch law originally obtained only in the border settlements, where the administration of justice either was or was supposed to be uncertain; that in the early days of lynch law, innocent persons were sometimes punished, and suits for damages were by no means unknown; that, about 1830, writers regarded the practice as on the wane and likely soon to disappear altogether; that before about 1835 the victims of lynch law were generally whites, occasionally Indians, but never negroes; that soon after 1830 a revival of lynch law took place, due to the anti-slavery agitation, and the practice spread throughout the country; that between 1830 and 1840 the term lynch underwent a change in meaning, and "to lynch" acquired the sense of to put to death; that during the same period negroes were first lynched; that about 1835 we first hear of "Judge" Lynch; and that in recent years lynching has been confined largely, but by no means wholly, to negroes in the South and West. It further appears that there is a direct historical connection between the killing of a negro in a highly civilized community in 1902 and the whipping of a white man along the frontiers in 1817. Step by step, the illegal whippings of 1817 have led to the illegal burnings alive of 1902. In short, the more civilized the country has become, the more brutal has been the punishment meted out under lynch law.

It will be observed that in some of the extracts cited above, there is mention of lynchers under the name of "regulators." Now the words "regulating," "regulation," and "regulator" were first employed in this country, so far as I am aware, at the time when the so-called "Regulators" came into existence in the back settlements of the Carolinas in 1768. It has been asserted that lynch law derived its name from Lynch's Creek, S. C., because at that place the practice of lynching began. This derivation of the term has yet to be proved, but the following extracts show that there were at that period instances of lynch law, in its original meaning of a whipping, and that the Regulators held a meeting at Lynch's Creek.

"CHARLES-TOWN, SOUTH CAROLINA, . . . July 25. . . . The last Accounts from the Back Settlements, say, that the People called the REGULATORS were to have a Meeting at Lynch's Creek, on last Friday, where it was expected 1200 would be assembled." 1768, Aug. 22, *Boston Post Boy*, No. 575, p. 2/1.

"*Charlestown, (South-Carolina) Sept.* 12. The people called regulators have lately severely chastised one Lum, who is come to town; but we have not yet learnt the real cause of this severity to him." 1768, Sept. 26—Oct. 3. *Boston Chronicle*, No. 42, i. 381/2.

"*Charlestown South-Carolina, August* 16. The outrageous opposition lately offered to the civil authority near Marr's Bluff on Pedee river, being at present a general subject of conversation, and by many attributed to the people called Regulators it may not be amiss to lay before the public the following information, viz. That there are two parties so called, and the proceedings of the one is frequently confounded with those of the other. That the first (called the honest party) consists, in general, of people of good principles and property, who have assembled chiefly about the Cougarees, the Ridge, &c. professedly with the view of driving all horse thieves, with their harbourers, abetors and other vagabonds, from amongst them; and that the other (called the rogues party) are a gang of banditti, or a numerous collection of outcast mullatoes, mustees and free negroes, all horse-thieves, &c. from the borders of Virginia and other northern colonies (the very people whom the regulators would have expelled the province, or brought to justice) and have taken up arms to carry on their villainy with impunity. The last accounts we have received of both are, that the former, on the 11th past. took one Charles Sparks of infamous character, on Pedee, and order[ed] him to receive 500 lashes, and quit the province. And of the latter, that an armed company of them, headed by one Gideon Gibson, on the 25th past, near Marr's Bluff, surrounded a constable and twelve men, who were sent to bring one of the villains before a magistrate, and after a smart skirmish, wherein two of the constable's party were mortally wounded, and one shot through the shoulder, took the rest prisoners, whom he discharged, after ordering them 30 lashes each." 1768, Oct. 3—10, *ibid.*, No. 43, i. 388, 389.

Obviously, we here have the thing itself, though not our now familiar term; and references to lynch law between 1768 and 1817, under any name, are much to be desired.

ALBERT MATTHEWS.

BOSTON, October 24, 1902.

## THE SPANISH NEGOTIATIONS.

TO THE EDITOR OF THE NATION:

SIR: As I read the correspondence between the United States and Spain (Foreign Relations of the United States, Dec. 5, 1898) relating to the period immediately preceding our latest war, I notice two letters that have a very strong bearing on the case, but to which, in your splendid article "At the Bar of History," of July 4, 1901, you do not refer. One, dated April 4, 1898, and written by Mr. Day to Mr. Woodford, reads (*omissis omittendis*):

"We have received to-day from the Spanish Minister a copy of the manifesto of the autonomy government. . . . It is not armistice. . . . It is simply an invitation to the insurgents to submit. . . . It need scarcely be pointed out that this is a very different thing from an offered armistice."

The other letter, written by Señor Polo de Bernabé to Mr. Sherman, reads, in part, thus:

" . . . that her Majesty the Queen Regent has given appropriate instructions to the general-in-chief of the army of Cuba, to the end that he shall concede an immediate suspension of hostilities for such a time as he shall deem prudential. General Blanco . . . reserves to himself to determine the duration and other details."

Your conclusion, drawn solely from the Queen's manifesto proclaiming "immediate and unconditional suspension of hostilities," would have been greatly modified had the contents of these two letters formed a part of your premises. But, though your conclusion was defective for want of some relevant premises, ethically it is the only just conclusion—a conclusion not dependent on the infantile technicalities of diplomatic correspondence.

Yet, in justice to those who, without tearful cant, openly advocate aggression, it should be admitted that, if by some unthinkable chance they can escape the "rebarbarizing" reaction of warfare, they will, in a measure, further evolution by killing off those whom they accuse of retarding it. The more scrupulous, however, who are not inclined to be the scavengers of evolution, ought to be glad that there is a sort of men who cheerfully do the dirty work of what they imagine to be progress.

JOSEPH DICK.

TOLEDO, O., November, 1902.

[The article referred to expressly restricted itself to *new* matter. The citations made by our correspondent are from documents long before made public; and, as he perceives, are in no real contradiction of the inferences which we drew from the later and suppressed dispatches.—ED. NATION.]

## THE FOOTBALL DEBAUCH.

TO THE EDITOR OF THE NATION:

SIR: Would it not be well for the serious-minded American people who have ideals for higher education, to take a moment of meditation to ask themselves whether they propose, without protest and in despair, to permit the colleges and universities of the country to continue the annual football debauch? That it is a debauch we need only present as testimony the columns of the daily press for the past month, including the notes on betting. But there are inside facts which we may well doubt whether many good people who lend their approval to the game are aware of. The brutality of the game may easily be seen; but the secret dishonesty which the excited rivalry leads to is not perhaps known to many outside college walls. What this rivalry is, how presidents of the smaller colleges are coming to regard the football teams as advertising adjuncts in the competition of student-getting, only those who are on the

inside can know. I have myself heard a college president appeal to a football team, in an assembly of all the students, in terms that would lead one to believe that the future of the college almost depended on winning a certain game.

Now what all this leads to is a disgraceful winking at anything to win. It is bad enough for thoughtless students to fall into the temptation of playing men under false names without the knowledge of the college authorities—I have known this to be done—but the debauch has not stopped at this. By the connivance of college authorities men are played who have only a fictitious connection with the college; *and the students of the college know that the college authorities aid and abet such action.*

In another college than the one referred to above I know the following facts to be true. A student was matriculated at 4 P. M. one day to play the next morning, when there was no intention on the student's part of attending the college. He has other business. In this same game two other players had, by the college rules, absolutely forfeited their right to play. *This was known to the students,* and yet not a member of the faculty was brave enough to protest, so intense was the feeling about winning the game. I may add that the game was won, and mainly through the "great work" of the false student matriculated at 4 P. M. on the preceding day. The opposing team had consented to accept him because they themselves had been guilty of an irregularity.

I have before me a letter received by a friend from a correspondent living near another college. It is proper for me to say that the specific instances I cite refer to small colleges. I suppose the larger institutions have not the same temptation of playing false students. The college to which I now refer has hitherto prided itself on its high moral tone. Its new President has the reputation of being a hustler for athletics, and by personal appeal he secured the return of B. for the football season. B. had already made arrangements to attend a professional school. The letter says:

"B. did matriculate and take a class or two, and will be paid enough for playing to get his outfit for winter, and to take him to ——, and to give his mother a little; and she is satisfied provided he does not get hurt. He will go to —— as soon as the ball season is over, about the 25th, I believe.

"Many are quite disgusted with Dr. ——. Say he is doing so much about athletics, and letting down the dignity of the university in many ways, just to get a large number enrolled, and does not care whether they stay or not if he can make it appear in the catalogue that the number of students has increased under his presidency."

Unless I am greatly mistaken, this private note, which had no thought of publication, will touch many responsive chords.

In this communication I have spoken only of the moral side of the football debauch. I have said nothing of the neglect of work caused thereby. This is another story.

Very respectfully, MEDIUS.

November 27, 1902.

"LATTER-DAY SUPERSTITIONS."

TO THE EDITOR OF THE NATION:

SIR: Assuming what is almost certainly the case, that your readers are misinformed respecting Theosophy, I hope it is not presumptuous in one who professes information on the subject to say that Mrs. Tingley is not a member of the Theosophical Society established by Mme. Blavatsky and Col. Olcott, and that she has repudiated all connection with it. Furthermore, by explicitly condemning one of the most prominent of Theosophical writers, she has thereby implicitly rejected the views of all other Theosophical authors of to-day. Mrs. Tingley, moreover, is called by her followers their "Leader," while the members of the Theosophical Society have never acknowledged any leader, and to them the possibility of leadership is wholly unintelligible. Theosophical students —while, of course, they are entirely indifferent to the opinion of those who are ignorant of their beliefs and pursuits—are nevertheless unwilling to be classed, by implication, with those who have long since seceded from the body known throughout the world as the Theosophical Society, the sole aim of which—I would alone add—is the study, by purely scientific methods, of the manifestation of the Divine Wisdom in the visible and invisible realms of nature.

FREDERIC WILLARD PARKE.

BOSTON, MASS., November 30, 1902.

# Notes.

Mr. S. S. Rider announces, in his Providence *Book Notes,* the near completion of his 'History of the Development of a Constitutional Government in Rhode Island.' This off his hands, he will resume the issue of his much-prized Rhode Island Historical Tracts.

Messrs. Scribner will publish next week Gen. De Wet's vigorous work on 'The Three Years' War.'

Little, Brown & Co. give notice that their three-volume trade edition of 'The Speeches and Other Writings of Daniel Webster, Hitherto Uncollected,' goes over till after the holidays. Nearer are 'The Last Days of Pekin,' translated from the French of Pierre Loti, by Myrta L. Jones, and 'First-Hand Bits of Stable-Lore,' by Francis M. Ware, finely illustrated.

In our favorable notice last year of the Blashfields' 'Italian Cities' (Scribners) we spoke of this work's capacity for interleaving with photographs by tourists whom it had served as an uncommonly trustworthy unconventional guide-book. Whether acting upon this hint or not, the publishers, who have purged the plates of some of the typographic infelicities pointed out by us, now offer the two volumes greatly enhanced in beauty and in value by forty-eight full-page illustrations from Alinari photographs. The selection has been admirably made and is remarkably unhackneyed; we cannot recall a better in a work of this character. Each subject is carefully described in the table. Here is a gift-book indeed.

A presentable one-volume edition of Burns's Poetical Works, annotated by William Wallace, LL.D (London: Chambers; New York: Dutton), is characterized by clear type and numerous illustrations from paintings, often of Scottish scenery. The notes are at the foot of the page.

John Lane extends his pocket "Lover's Library" with 'Love Poems of Herrick,' with the usual delicate colored borders and pretty binding.

A notable example of compression without illegibility and of comprehensiveness without bulk is offered by the latest volume in the "Oxford Miniature" series, viz., 'Aurora Leigh, and Other Poems, by Elizabeth Barrett Browning' (H. Frowde). The selections are from the early poems, together with a general miscellany and the Sonnets from the Portuguese. The Oxford India paper enables the 948 pages to occupy no more cubic space than 3 inches x 4½ x ¾. There are indexes by first lines and by titles.

While discoursing *de minimis,* we may mention a reprint of Thoreau's 'Life without Principle,' with Emerson's brief sketch of the author, published at the Sign of the Hop-pole, Eden Bridge, Kent, Eng. There is not much to say of it except that the Chiswick Press has done well by the typography of the oblong page.

Houghton, Mifflin & Co. have been well advised in going abroad for an illustrator of Kate Douglas Wiggin's 'Penelope's Irish Experiences' in a new edition. Mr. Charles E. Brock's deft hand has adorned Mrs. Wiggin's lively chapters amusingly and characteristically with pen sketches in the letterpress, with which they harmonize very successfully.

Alice Barber Stephens's designs for Little, Brown & Co.'s new edition of Miss Alcott's 'Little Women' are of a superior order. They are elaborate wash-drawings, clever in execution, full of detail, with a feminine mastery of female costume and a happy regard to the fashion of the day of the "little women." Each has a full page to itself, if we except the vignette of the title-page. Few classics are so well treated.

Messrs. Wainwright and Palmer's 'Harvard Alphabet' (Cambridge: Harvard Cooperative Society), is a favorable sample of the college humor that has sustained the *Lampoon* for so many years. The verse is bright, and the illustrations (by two unnamed designers) make a good match. It should be said that much of the jingle is collegiate rather than Havardiensian, so that at other institutions this handsomely made volume is capable of finding favor. Yale, we are sure, would take kindly to the letter G:

"G what a Game!
Why the deuce can't we score?
It is always the same,
Hully Gee! what a game!

The half-backs are lame
And the line men are sore.
Gee! what a game!
Why the deuce can't we score?"

With the letter H, embodying an old Jo, the case might be different.

'Recollections of Dublin Castle and of Dublin Society, by a Native' (Brentano's) is amusingly written, evidently by one who has had experience of Dublin life in the fifties and sixties. Perusal will bring up many recollections, both sweet and bitter, to those who have lived in the metropolis of Ireland within the period treated. The book is, however, more than less of a caricature, and is as likely to be acceptable to thoughtful Irishmen as must be "nigger" literature to persons of the colored race. The burlesque portraiture of the Earl of Carlisle (Lord Morpeth), one of the best of noblemen, is peculiarly ungracious. Books such as this and 'Ireland Sixty Years Ago,' which appeared in the forties, are seldom written concerning

phases of life among people who have the power to compel respect.

It is pleasant to welcome a genealogy in which moderate size and sufficient fulness are so well joined as in the 'Descendants of Richard Everett of Dedham, Mass.,' by the late Edward F. Everett of Cambridge (Boston: T. R. Marvin & Son). The family is not a very large one, and cannot be said to have been always prominent in the whole length of the annals of New England. In the last century, however, it had its full share of honor in the persons of the Rev. Oliver Everett and his gifted sons, Alexander H. and Edward, and grandson, William Everett; Horace Everett of Vermont; the Rev. Dr. Charles C. Everett of Harvard, and David Everett, author of "You'd scarce expect one of my age." The notices of all of these, while short as biographies, may perhaps be described as models for their place in a book of family genealogy. There are several portraits in the volume, among them two of the Hon. Edward Everett, one of the Hon. Horace Everett, which might almost be taken for a head of Rembrandt, and one of the author, Edward F. Everett, which, in the opinion of a classmate, is a wonderfully good likeness. The volume declares itself to be "privately printed," yet appears to be offered for sale. It comes to us by way of the above firm, but we understand that application for copies should be made to Mrs. Edward F. Everett, Cambridge, Mass.

Seventeen years ago we spoke of a work by Dr. Douglas Graham as "a valuable professional book for which, and for the subject to which it is devoted, we venture to predict distinguished success. But it will come slowly." The third edition of his 'Treatise on Massage' (Lippincott), illustrated and much enlarged, is evidence of this success. The treatise is a capital demonstration of the value of external treatment in many and serious conditions, and its considerable claims do not transcend the truth. One might wish the style more dignified at times; but facts are better than style, and these are perfectly satisfactory. We are glad to commend it again to our medical readers and to intelligent laymen.

The D. Van Nostrand Co. bring out an eighth edition, "carefully revised and enlarged," of Mackrow's well-known and indispensable 'Naval Architects' and Ship-builders' Pocket-Book.' More recent examples of ships might be cited than the obsolete *Agincourt*, *Bellerophon*, etc., while the persistent misspelling "Mesaure" (p. 615) suggests that the revision might be still more "careful."

Mrs. Candace Wheeler's 'How to Make Rugs' (Doubleday, Page & Co.) is an earnest plea for the resuscitation of the hand-loom of our foremothers, put to the use of producing rag, cotton, and woollen rugs and portières. She appeals for workers to the farmer's family and rural communities, and incidentally to any "kind and cultivated" folk who can act as go-betweens for the country supply of the loom and the city demand. The book is a practical one of direction as to details of coloring and weaving, with the true artistic feeling one would expect from the writer. May the ideas of such women as Mrs. Wheeler and Mrs. Albee bear abundant fruit in our *machine*-carpeted land!

Of Mr. H. W. Macdonald's essay entitled 'Electric Waves' (Cambridge, Eng.: University Press; New York: Macmillan) we can only say here that it constitutes a highly important contribution to the mathematical theory of electricity, going down to the very bottom of the subject, and putting it in a much clearer light for the mathematician.

Part IX. of 'The Georgian Period,' the excellent publication of the American Architect and Building News Co., is at hand. In this number much attention is given to the neighborhood of Charleston, S. C. The text and plates may be considered as being in continuation of Part X., forming with it a study of the very interesting and characteristic "Old Colonial" architecture of the Sea Island district and of the upper country which depends upon it. Since the days when the exigencies of civil war carried some of us to the seacoast thereabouts, there has been little occasion to visit the somewhat out-of-the-way villages and places of summer resort in which these admirable houses and almost equally interesting churches are to be found. But the city of Charleston itself furnishes St. Michael's Church, to which several plates are given, and St. Philip's Church, which is almost as fully illustrated. There are also the unique and attractive village church at Santee and some admirable tombs, of the kind which were built on the plantation for the inhumation of successive generations, like the very well known instance at Mount Vernon. The text is furnished by C. R. S. Horton, E. Eldon Deane, and Olive F. Gunby.

The same firm announces 'The Seats of the Colonists and Other Furnishings.' The idea once entertained of including colonial furniture in 'The Georgian Period' has, it seems, been definitively abandoned; and the work just named will be undertaken if the subscriptions are sufficiently numerous. The cost of it is to be $20. Horace C. Dunham of Boston and W. Galsworthy Davy, a well-known English compiler of archæological books, will furnish measured drawings and photographs, and the book promises to be of very great interest and value.

Adelaide Keen's 'With a Saucepan Over the Sea' (Boston: Little, Brown & Co.) is a compilation noticeable for wise selection and judicious condensation. Like many of its predecessors, however, its use will be confined to those who have more than elementary knowledge of cookery. The professional domestic cook, we fear, can hardly be induced to read it and follow faithfully its directions and suggestions. Nothing but praise can be bestowed upon this epitome of the more savory and piquant culinary concoctions of the various European nationalities. The author is to be congratulated upon the discrimination which leads her to include in her list garlic sauce (Provence). Unfortunately, she gives the formula in terms so general that it will not be intelligible to more than one in a thousand into whose hands the book may fall. The making of this sauce involves a great deal more than she indicates in the recipe. It is observable in almost all cooking compilations issued in this country that a *liaison* made of beaten yolks of eggs to combine or amalgamate the ingredients of a soup or sauce is rarely mentioned, whereas abroad this amalgam is strenuously insisted upon. In the recipe for garlic sauce, Miss Keen makes no mention of this important factor.

The sixteenth volume of the 'Collections of the Wisconsin Historical Society,' just issued, is eminently a source book of knowledge regarding Wisconsin under the French régime from 1634 to 1727. The editor, Secretary Thwaites, has here compactly stored multitudinous historic materials in part known only to himself, or not before translated, or accessible only in the archives of Canada or France. The work is distinctly annalistic, having topics ranged under more than a hundred dates. The seventy-three volumes of 'Jesuit Relations,' edited by Mr. Thwaites, and as many more other works, are laid under contribution, so that many subjects imperfectly treated in former volumes of the Society onward from 1855 are elucidated. The rise and progress of fur trade and missions, which walked hand in hand, are cleared of many obscurities. Indians are shown *in puris naturalibus*, just as they were when first encountered by whites. The difficulty or impossibility of benevolent assimilation between fur traders and natives is strikingly illustrated, each proving a curse to the other; the one becoming a hard master and the other a refractory slave. The corruption among French officials is a startling object-lesson that irresponsible power will be abused so long as man is man. A mission was established near the head of Lake Superior in 1660; how much had then been done in Massachusetts? In 1701 more than 30,000 pounds of copper ore were mined on Blue Earth River. This history will be doubly read, thanks to thirty-five pages of index by Miss Blair, who, by her wonderful labor in that line for the 'Jesuit Relations,' has won national laurels. Every page makes references we are eager to trace.

The *National Geographic Magazine* for November controverts the prevailing impression that Lake Erie is getting lower. The contrary is true, according to Prof. E. L. Mosely, who asserts that "the slow tilting of the earth's crust in the Great Lake region" is deepening the lake. The evidence on which he relies is mainly the existence of submerged stumps and stalagmites, the formation of marshes, the conversion of peninsulas into islands, and of islands into reefs. "At many places in northern Ohio roads and houses have been moved south on account of the encroachment of the water. Many orchards have fallen into the lake. The same is true of the Canadian shore. Nowhere is there any building up at all comparable with the amount of land lost. Since 1809, when the first survey was made, more than 500 acres have been lost in Erie County along the lake and in the eastern part of Sandusky Bay, while the enlargement of the western part of the bay probably amounts to several square miles." Considering its source, the article on the course of the retail coal trade by the Chief of Division of Mineral Resources is distinctly disappointing as a contribution to our knowledge of a subject of great importance. From a brief account of the work of the Signal Corps for the last fiscal year it appears that the telegraph system in the Philippines was increased by 2,600 miles, making the total 6,434 miles. In Alaska, 1,121 miles of land lines and submarine cables have been laid, and there were turned over to the Cuban Government 3,500 miles of wire and equipment which

had been put in during the American occupation.

In the *Geographical Journal* for November the Rev. George Grenfell describes the upper Congo as a waterway, its currents, floods, and the various obstacles to navigation. There is now on the river a fleet of more than a hundred steamers of all sizes, "from small launches up to crafts carrying between 200 and 300 tons." This is the growth of twenty-one years, the first steamer having been launched in November, 1881. It would be greater but for the difficulty of obtaining food. "After leaving the Pool, nothing or next to nothing is to be obtained for the first 180 miles. . . . After carefully counting the houses in the villages on the banks of the river, and allowing a very full average for the inhabitants of each house, it is perfectly clear that there are not more than 125,000 people in the villages and towns along the 980 miles of waterway." Though the author makes no comment on this fact, it would seem to be a strong confirmation of the charge that the Belgian method of treating the natives tends to depopulate the Free State. Major Rycroft, in telling of a trip along the Mediterranean coast of Egypt, calls attention to the archæological interest of the journey, as everywhere west of Alexandria "one comes across the well-preserved foundations of ancient towns, which should well repay careful investigation." Prof. E. Suess discusses the problems offered by hot springs and volcanic phenomena, especially the question, "whether the water of boiling springs is vadous [that is, of superficial origin] or hypogene." Other articles are a sketch of Capt. Sverdrup's explorations in the Arctic, by Sir Clements Markham, and a visit to the Hoggar Twaregs by W. J. Harding King.

*Petermann's Mitteilungen*, number ten, contains a summary, by Dr. G. Schott, of recent observations in respect to the distribution of the surface salinity of the oceans. From the accompanying chart it appears that in the Atlantic there are two large areas, north and south of the equator, with a very high percentage of salinity, but in the Pacific there is one comparatively small area with a like percentage south of the equator. W. Stavenhagen sketches the history and present condition of cartography in Russia, and the editor, Dr. Supan, sums up the scientific results of the German and English antarctic expeditions so far as they have been received.

The publishers of *McClure's Magazine* follow good examples in issuing a Complete Index from June, 1893, to April, 1902, inclusive. Authors and subjects together, it fills twenty-nine pages in double columns.

Prof. W. E. Mead of Wesleyan University, Middletown, Conn., solicits answers to inquiries concerning "two distinct ideals of teaching composition" in schools as stated in Circular No. 3 put forth by the Pedagogical Section of the Modern Language Association of America. Those who may be desirous to aid in the investigation, which has a practical end, should send for this circular as soon as possible.

'The Cynic's Calendar of Revised Wisdom for 1903' (San Francisco: Paul Elder & Morgan Shepard) is well named. The division of parts between Oliver Herford, Ethel Watts Mumford, and Addison Mitzner is not wholly revealed. The calendar is in book form, and each monthly subdivision bears a perverted motto, like "Fools rush in—and win, where angels fear to tread." Red borders and red designs give a lurid attractiveness to the cynicism.

—Henry Loomis Nelson writes of 'The So-called Steel Trust' in the December *Century*, continuing that magazine's series of articles on the great business combinations of the present industrial era. Mr. Nelson is rigidly expository, not argumentative. Indeed, he has fought so shy of the argumentative phases of the subject that one feels some defect in the exposition. For the future he ventures only the conditional prophecy that "if the theory of the United States Steel Corporation is vindicated by the test of time, a great advance will have been made by it in the industrial world, which will inure to the welfare of labor and to the benefit of the consumer, as well as to the profit of those who have made the venture." The reader may add for himself the obvious conclusion from the facts presented, that such a universally beneficent outcome of the Trust movement must depend upon the ability of the people, through the national Government, to impose, and the readiness of the combinations in good faith to accept, such legal regulation of the movement as will hold in check the temptation to extortion which great financial power always tends to excite; and will give due assurance against the domination of Government agencies by corporate influences. Prof. W. T. Hewett of Cornell University contributes a very interesting and appreciative sketch of the work of F. W. Robertson, pointing out with keen perception the reasons why his influence must surpass in depth and permanency that of such men as Beecher, Spurgeon, Newman, Liddon, Caird and others, who attracted much wider attention in their time. Weir Mitchell makes a brief study of some seven hundred examples of personal heroism displayed in the attempt to save others from bodily harm. The instances were collected during a period of ten months by a clipping agency, as the result of a discussion over the question whether the civilized world is improving in the quality of altruism. Plenty of altruism in specific cases is developed, but the results are admitted to throw little light on the original question. It would be interesting to have Dr. Mitchell discuss the fact that these displays of altruism in great peril are often by men whose everyday life is, to outward appearances, altogether selfish.

—Richard Harding Davis opens the Christmas *Scribner's* with an article on "The Gentle Art of Bull-fighting." With the eye chiefly upon the profuse illustrations, one might well question the ethical utility of such matter in an American family magazine, but the text puts very effectively the essential brutality and cowardice of bull-baiting, its utter lack of that evenness of chances as between the two sides to the contest which is the foundation of all true sport, as well as its spectacular brilliancy and its power to appeal to a morbid taste for the sensational. Mrs. Lucy Derby Fuller contributes a few letters from Richard D. Blackmore, which she received at various dates from 1879 to the year of his death. Among the items of personal interest to be gleaned from them are his strong repugnance to photographic celebrity, his distrust of his own power as a judge of literature, his keen appreciation of the American interest in his books, and his love for the poetry of Paul Hamilton Hayne. The Editor moralizes upon the vast expansion of American wealth during the present generation, but without any definite conclusions. In "The Field of Art" Will H. Low mildly deprecates the announced intention of Columbia University to establish a department to include practical instruction in painting and sculpture. Aside from the features mentioned, and two short poems, the number is given up to fiction.

—The December *Harper's* is devoted chiefly to fiction and poetry in recognition of the Christmas season. Distinctively Christmas stories, however, are noticeable only by their absence. Margaret Deland draws upon the Old Chester folk for an excellent story, and shows that the resources of Dr. Lavender had by no means been exhausted by former efforts. Among the more serious contents of the number the first place belongs, without contest, to Mr. Swinburne's article on Goneril and Regan. His well-known tendency to superlatives is used without restraint. The one tragedy of "King Lear," he says, would prove its author the greatest poet that ever lived as clearly as does his entire work. The Hebrew prophets and the author of Job may surpass him in imaginative sublimity and passion, but are quite incomparably inferior in imaginative intelligence. Sophocles is his peer in nobility, beauty, and kindliness, "but the gentle Shakespeare could see farther and higher and wider and deeper at a glance than ever could the gentle Sophocles." Aristophanes, with all his infinitely joyous wit and infinitely inexhaustible humor, can set nothing against Falstaff or the Fool. All this from the first column; but it fairly represents any page of the four. In connection with Sophocles, Mr. Swinburne remarks that "Antigone herself—and with Antigone alone can we imagine the meeting of Cordelia in the heaven of heavens—is not so divinely human as Cordelia." This rather strikingly recalls two lines of Carducci's in his stanzas "Beside Shelley's Urn," a sort of *trionfo*, passing in review in pairs the inhabitants of "Fancy's resplendently lovely sea-girt island":

> "La pia Cordelia chiama—Deh, candida Antigone, vieni!
> Vieni, o greca sorella! Cantiam la pace a i padri."

John D. Champlin, jr., gives us the "True Captain Kidd," stripping the pirate hero of much of the wickedness that has made him popular. Booth Tarkington puts in a spirited plea for the Middle West against a certain condenscension in Easterners, and the Easy Chair drops literary criticism for a moralizing ramble over the grounds of a typical county fair.

—The visit of the Emperor William to his uncle at Sandringham has brought with it a visit to Oxford which will doubtless do much toward shaping the policy adopted at Berlin as to Rhodes scholars. Dr. G. R. Parkin, appointed by the Rhodes Trustees to frame a scheme for the appointment of the American and Colonial schol-

ars contemplated in the Rhodes will, has no sooner left Oxford than he is succeeded by two representatives of the German Emperor, bent upon a similar errand, and assisted by the experience already accumulated by Dr. Parkin's uncommonly successful plan for feeling the pulse of Oxford upon the general question of Rhodes scholarships and Rhodes scholars. Messrs. Kielhorn and Schmidt have, as Dr. Parkin had done before them, drawn up a list of questions which they have addressed to the several Oxford colleges. One of the plans under consideration seems to be the appointing of young men fresh from the German secondary schools. These youths would go to Oxford for a year, which would be counted as a part of their university career in much the same way as if it had been spent at a German university. The great argument in favor of this plan seems to be that a number of young Germans are in the habit even now of resorting to Oxford for a year. Against it is the consideration that the schoolboy age is one which is too impressionable; youths at this stage might easily learn to love English ways too much or to detest them unreasonably.

## NEW EDITIONS OF POE.

*The Complete Works of Edgar Allan Poe.* Edited by James A. Harrison. 17 volumes. Thomas Y. Crowell & Co. 1902.

*The Complete Works of Edgar Allan Poe.* With a critical introduction by Charles F. Richardson. 10 volumes. G. P. Putnam's Sons. 1902.

At last Poe has come into his own. His text was long the most neglected in our native literature; it is now, if not the best, certainly the most edited of all. Our classics cannot be too often issued, and both these new editions have, each in its own way, novel points of excellence unshared by others. The coincidence of their publication strongly emphasizes the established place of Poe in our standard literature, and the care with which his fame is cherished. The Virginia edition is, indeed, an old-fashioned labor of love, the work of three gentlemen of the University of Virginia where Poe was educated, and sets him forth with local pride as a Virginia product. The more sumptuous "Arnheim Edition" of Messrs. Putnam, introduced by Professor Richardson of Dartmouth College, presents Poe exclusively as a "world-author." In other respects, the two editions are also opposed; and, if the former receives greater attention here, it is because of its unusual claims. The "Arnheim" is a careful standard reprint, in substance, and is content to take its place with others. The Virginia editors are of a different mind. They endeavor to reconstitute the text; they claim that they have freed it from the corruptions of other editors, and that it is now presented in its original integrity for the first time. Such a claim—the question being what is the standard text of one of our most distinguished authors—deserves scrutiny.

The first point made by the Virginia editors (and it is often reiterated) is, that they have gone to the original sources. A hasty reader might get the impression that they only had done so. Griswold, of course, had the original sources, as Poe's executor, for so much of Poe's work as he included in his edition. It is not the fact of going to the sources that counts, but rather the use one makes of them. Griswold attempted no more than a fairly good reprint of what seemed permanent or interesting in the miscellaneous papers of a writer, lately dead, whose place in literature was still to be judged. The edition so made served its purpose until, with the increase of Poe's fame and the lapse of time, something more seemed due him. Stedman and Woodberry then gave a new edition; they went to the original sources, rearranged the matter, modernized the mode of printing as regards spelling, punctuation, and so forth, corrected errors in dates, names, quotations, foreign terms, and the like, and, in a word, established a text such as any author desires of his own works. This was, in fact, a critical edition. There is another way of editing the sources, namely, to reproduce them in their original state. This the Virginia editors have adopted. They have retained the contemporary form in which Poe's writings appeared, in all the details of the printing, and have corrected errors only in the most necessary cases, and then with notice to the reader. It is a facsimile method of editing. Either method has advantages of its own, and both have been applied to many great authors; but, in general, the former is the best for the general public; the latter is the most useful to the special literary student. With this general statement as to the character of the editing, and with the remark that the arrangement is chronological, by divisions, the results may best be illustrated by taking the parts separately, and examining them with regard to the three prime virtues of editing—fulness, accuracy, and authority.

In the "Tales" and "Poems" there is no new matter, and the verbal text does not differ in any material point from that generally received, such variations as there are being in the nature of very minor corrections. The original sources, printed and manuscript, are the same used by other editors, except that the first publication of "The Angel of the Odd" in the *Columbian Magazine* has been found and collated. The identification had been previously made by the late W. M. Griswold. Further research by the editors might not have been fruitless, however; for example, the first publication of "The Sphinx," for the text of which Griswold has been the only authority, was in *Arthur's Magazine*, January, 1846, and an earlier text of "Mystification" than any collated may be found in the *American Monthly* for June, 1837. The novel feature of the edition, under "Tales" and "Poems," is a variorum, showing the state of the text in the different forms published by Poe. As is well known, Poe was accustomed to revise his work of all sorts, and print it over again whenever he had a chance. The extent of this revision is remarkable, and the illustration now afforded of it by this laborious compilation is complete for this section. Woodberry had already done the same thing for the "Poems," but the extension of this method to the "Tales" is the most peculiar and valuable trait of the Virginia edition.

To confine attention to the "Poems," "The Raven" may be regarded as a fair example by which to test the accuracy of the collation. "The Raven" was issued by Poe in the *American Whig Review*, corrected in the *Broadway Journal*, and revised in the edition of 1845; it now is given either in a fourth form, that of Griswold, or a fifth, that of the Lorimer-Graham copy (originally Griswold's) of the 1845 edition, with MS. corrections by Poe. There are thus five distinct forms of the poem. If the variorum of the Virginia editors be compared with these, the following results appear. In the account of the first form, two readings, *mortals* and *something*, are recorded, but do not occur; in that of the second, the same readings are recorded, but do not occur, a variant in stanza xi, 5 is omitted, and a misprint, *vied* for *tried*, should be noted; there is no account of the third form; there is no account of the fourth form, except a reference made to it in the account of the first, and the reference is incorrect; the fifth form is the one adopted in the text. The editors give, however, an account of the form in the *Southern Literary Messenger*, which is verbally the same as that in the *Whig Review*, but differs in punctuation. In describing this, they omit six readings, give in stanza xi. the *Broadway Journal* reading by mistake, and in stanza ii, 2 (as also in the *Broadway Journal* form in the same place) adduce a variation where none exists.

The raven is an ill-omened bird, and makes here a pretty nest of errors. It is not given to editors to be faultless, and this is a peculiarly trying kind of work; the rest of the editing is, on the whole, much more to be trusted, so far as we have examined it. A few other errors may be noted in passing, in case the work should be revised, as it needs to be: in "Al Aaraaf," 1831, lines 26-30, are omitted; in "Israfel," 1831, viii. 4, *so* for *as;* in "The City of Sin" (misprinted *Sea*), 1836, the omission of six lines from 1831 is not noted. The date of "To One in Paradise," in *Godey's*, should be 1834. Misprints are numerous throughout the notes; one in the body of the text, "The Valley of Unrest," line 22, *three* for *there*, may be worth correction. Apart from these matters of detail, we observe that the variant readings of the Philadelphia papers are entirely omitted, as well as those of the Wilmer manuscript and of the manuscript facsimile of the lines to Mrs. Shew.

To pass to the critical writings, it is here that the editors are most proud of what they have accomplished; and if enthusiasm for their author and laborious patience in his service were all there is to editing, they might well be satisfied. They have greatly increased the bulk of the section, partly by including reviews hitherto thought too valueless to be revived, and partly by printing the earlier forms of later critical writing in addition to the latter. The method followed is, in fact, the same as in the "Tales" and "Poems," only, instead of giving the variants in notes, the original articles are reprinted. It is better that there should be repetition, it is said in explanation, than that anything of Poe's should be lost. The results are occasionally surprising, owing to Poe's inveterate habit of using his old material over again. For example, a long review of Hall's 'Book of Gems,' from the *Southern Literary Messenger*,' August, 1836, was reprinted, very slightly revised, in the *Broadway Journal*, 1845; the editors, therefore, give it twice—once in volume ix. 91 as "early criticism," and again in volume xii. 139 as "later criticism." Some passages will be thus found

in at least three places. In these ways the amount of critical matter is enlarged by the reprinting of earlier forms of papers which have hitherto been taken only in their final forms, and by reviving a considerable portion of transitory and inferior criticism mainly from Poe's youthful period. The section "Marginalia" is much swelled in this way. In respect to fulness, nevertheless, nothing previously unknown has been found, nor is all that is known included.

The critical section, however, raises a much more important question than that of completeness—the question of the authority of Griswold's text in those portions where it differs from the magazine publication by Poe in his lifetime. The Virginia editors challenge it, and assail Griswold's character after the old manner of Poe's apologists. The subject is brought to a head in the text of the 'Literati.' In the "Editor's Preface" the chief editor says, without qualification: "Of the original thirty-eight papers printed by Poe, five found in the current editions are *Griswold's substitutes for Poe's original articles*. We have rejected the spurious papers and put Poe's back in their places." The italics are his own. In the special "Introduction" to the 'Literati,' he adds: " 'The Literati of New York City,' now for the first time printed under its own title, just as Poe wrote it, was 'edited' by Griswold, who substituted for Poe's papers on Thomas Dunn English, Mary E. Hewitt, James Lawson, C. F. Briggs and Mrs. F. S. Osgood, other papers in the Poe manner. These Griswold versions will be found in the Appendix." The charge is grave, and should not have been lightly made. It is that Griswold, being Poe's literary executor, tampered with the text, and "substituted," in fact, "spurious" papers "in the Poe manner" for Poe's own articles in these five cases; and elsewhere the position taken is that Griswold, unsupported by an independent text, is untrustworthy. Let us take the case of the paper on Mrs. F. S. Osgood. Griswold's text is printed in the Appendix (vol. xv, 271). If the reader will turn to volume xiii, 175, under the head of "Later Criticism," he will find a paper on Mrs. Osgood published under Poe's name during his life in the *Southern Literary Messenger* for August, 1849, and hence here included. It is identical with Griswold's paper, except for some slight variation in the extent of the quotations from Mrs. Osgood's poems, and also for the omission of some five lines at the end. In other words, the paper on Mrs. Osgood, described as "spurious," and written "in the Poe manner," is also printed as Poe's undoubted work. It is hardly credible that so stupid a blunder should have been made, especially when the editor was attacking the character of one of his predecessors; but there the two articles stare the reader in the face.

"We have carefully disentangled what might well be called the snarl of the 'Literati,' " says the editor, and this is the way he began to do it. What is "the snarl of the 'Literati' "? The truth about it is as follows: Poe contributed a series of papers, with this title, to *Godey's* in 1846. At a later time he formed a plan of gathering his critical writings on American authors into a book, and, as usual, he rewrote and rearranged the whole, using his old material. The work was advertised to appear in the spring of 1847, but it was never published. The manuscript of this work, with some parts missing, was found among the Griswold papers. The way in which Poe used it may be readily illustrated. The present writer has before him pp. 79, 80 of the MS. which contain a revised version of the paper on Laughton Osborn in the 'Literati.' Poe used a portion of this to make his introduction to his review of Lowell's "Fable for Critics" in the *Southern Literary Messenger* for March, 1849. The rest has never been printed. In the last-mentioned magazine for October, 1850, appeared "Poe on Headley and Channing," announced as "from advance sheets of 'The Literati,' a work in press by the late Edgar A. Poe." The existence of the work in question, then, namely, a revised 'Literati,' is clear; and from its pages Poe's later critical magazine writings were extracted. He was merely following his usual method when he sent the paper on Mrs. Osgood to the *Messenger* in 1849. From this same source, there can be no doubt Griswold obtained the half-dozen critical papers not previously published, as well as the four other "substituted" papers of the 'Literati,' and also the rearrangement of the papers on Hawthorne and other writers at which the Virginia editors are so indignant.

"Griswold," Professor Harrison says, "has taken the review of Hawthorne in *Godey's Lady's Book* for November, 1847, split it open, inserted another review of Hawthorne from *Graham's Magazine* for May, 1842, mutilated the latter, and then continued with the tail fragment of the 1847 review as colophon, thus dissecting Poe's later paper on the New England writer, and inserting scraps in fragments from one written five years earlier."

This was precisely Poe's way of treating his own work. Griswold would not have taken the trouble to do it. There is no ground to question for a moment that Griswold had manuscript authority for whatever he published differing from or in addition to Poe's printed texts. Even in the case of "The Raven" it must be held an open question whether his version or the Lorimer-Graham version, which he also owned, is of the higher authority. As to the 'Literati,' Griswold was in possession of a manuscript, more or less complete, in part a revision of old work, in part a first copy of MS. elsewhere used in other connections, and, in general, crossing Poe's published work in various ways. It is to be inferred that he used this manuscript, as was said above, for the final form for such papers as those on Hawthorne, and a revised form for the five 'Literati' papers, and the only source for a few pieces; and that he did not utilize it in cases where (as in Osborn's) it would have involved repetition of passages elsewhere appearing.

The truth is, that the editor's prejudice against Griswold has led him to reject Poe's own late and mature revision of his major critical writings in favor of these early, scattered, and fragmentary forms in which they appeared in the magazines in their original helter-skelter production. The same question, it should be observed, arose, though less importantly, in the "Tales." There the editor "straddled"; for example, Griswold's revision of "The Cask of Amontillado" is rejected, "as we have no positive evidence that these changes were made by Poe"; his "Hans Pfaall" and "Metzengerstein" are accepted, "as undoubtedly founded on a revised form of the text in the hands of the editor"; and his "Thousand and Second Tale" is also accepted, but without reason assigned. In conclusion, it must be held that Griswold's authority, so far from being impaired, is strengthened by the present attack on him, and that the edition itself suffers in just that proportion in which it departs from him in substance. In any discussion of the text of Poe the primary fact should never be lost sight of, namely, that Griswold had Poe's papers, as collected and prepared by Poe himself, who expected that he might die at any time and had taken care to ask Griswold to be his executor. Griswold's task was comparatively a light one; he had no motive to tamper with the text, and beyond the fact that he did not go much outside the collections he had received, and did not oversee the printing with great accuracy, there is no fault to be found with him.

We have left ourselves with short space for the remainder of the contents of the edition, *i. e.*, the Letters and the Biography. The idea of collecting the letters was an admirable one, for, taken together, they give, with all their triviality of subject and frequent meanness of spirit, the best personal impression of Poe. The collection is very complete, though a few have been missed, as, for example, the letter to Bryan, published April 16, 1892, in the *Critic*. The editor makes much of including the Griswold papers which were copied for him from the originals at Boston, or procured in other ways. We observe that he does not mention the publication of all the important letters to, from, or about Poe, in this collection, by Woodberry some years ago. The same lack of candor is even more noticeable in the fact that, while he has obtained several of the letters first collected in Woodberry's 'Life of Poe' from the original sources and owners, and has paraphrased such others in it as he could not so obtain, including those to Lowell, he does not mention that biography as the source. In his own biography of Poe there is very little that is new, and that little is discreditable to Poe. He revives the Richmond gossip about Poe's demanding money of a lady of the Allan family and smashing the windows of the house on being refused, and he is the first biographer to state the cause of Mr. Allan's rupture with Poe as being the latter's forgery of the former's name, though the fact has been strongly suspected. His authority is a niece of Mr. Allan, from whom he prints a letter. There is no attempt in the biography to conceal Poe's faults. Indeed, there has been no such collection of the evidence against Poe as is here gathered. The whole of the English episode, for example, is included, and the damaging letter of his friend Thompson—"no confidence could be placed in him in any relation of life"—with many others, revive nearly all the scandal connected with his name. It would hardly have been possible for any one except a professed Southern apologist of Poe to do this without offence; as it is, an unmeasured eulogy of Poe (these things excepted) makes the balance even.

A few incidental blemishes are to be regretted in this part of the work. The sneer at Longfellow's veracity might well have been omitted, and the attitude toward Lowell is an unpleasant one, while such things as the charge of lying brought against Briggs are, perhaps, though ground-

less, to be expected, since the apologists of Poe have always shown an incapacity to appreciate the fact that the character of others beside Poe is at stake in their statements. Altogether, the biography is a very curious mixture of derogatory facts and laudatory remarks. The other critical apparatus of the edition is of very slight value.

On the whole, notwithstanding its shortcomings and errors, its minimizing, obscuring, and undervaluing the labors of others in the same field, and especially its wrong-headed attitude toward Griswold, for which it pays so heavy a penalty in lessening its own authority, the edition is to be heartily welcomed: it gathers together much obscure matter for the student of Poe, and collects in an accessible form much that has hitherto been scattered in many places, and it will range with other editions, not swallowing them up like Aaron's rod, but reposing amicably beside them on library shelves.

## THE ELDER DUMAS.

*Alexandre Dumas (père): His Life and Works.* By Arthur F. Davidson. Philadelphia: J. B. Lippincott Co. 1902.

*The Life and Writings of Alexandre Dumas.* By Harry A. Spurr. Frederick A. Stokes Co. 1902.

*The Speronara.* From the French of Alexandre Dumas. By Katharine Prescott Wormeley. Boston: Little, Brown & Co. 1902.

It was to be expected that the centenary of Dumas would be immediately attended with a fair crop of forced literary growths; both author and publisher find their accounts in the ready sale of the conventional "timely" volume. Miss Wormeley's tolerably fluent translation of Dumas's 'Le Speronare' merits a respectable place in the list of such books, and may be recommended to readers so unfortunate as to require the help of an English version in order to accompany that liveliest of travellers on his Sicilian tour. To look for the original buoyancy of style in the resultant transfer is to court disappointment.

The work of Mr. Spurr, while fulfilling the recognized requirements of an anniversary volume in the steady exaltation of its subject to a height which even the vanity of Dumas might have contemplated with misgiving, shows a far too obvious haste in compilation, and somewhat off-hand methods in accepting or rejecting biographical evidence. For instance, it is unprofitable (as Mr. Davidson says) to concern ourselves to-day as to whether the Marquis de la Pailleterie did or did not contract marriage with the woman from whom his descendants inherited their African quality of skin and hair; but opinion on one side or the other should certainly rest on stronger grounds than an assertion by M. Parigot in his insufficiently documented contribution to "Les Grand Écrivains Français." Mr. Spurr disposes in similar fashion of the difficult subject of Dumas's moral burdens in the matter of literary collaborations by summarily riding over the charge.

The volume that stands at the head of our list offers in every respect a striking contrast to its neighbors. If Dumas, during the period of his waning vogue and fortunes, had chosen to complete the 'Mémoires' of 1852-'54, which originally filled twenty volumes with the doings of only thirty years, Mr. Davidson would have been deprived of a rare opportunity and his English readers of an entertaining book. Fortunately also for both, no equally brilliant and rapid pen anticipated him; and we note that, notwithstanding his ample bibliography of French authorities, the present biographer passes by Fitzgerald's almost negligible attempt in discreet but significant silence. The spirit in which the task has been conducted appears in the grave irony of its first prefatory page. To any but the most literal reader, the suggestion that an adequate biographer of the swarthy giant of letters should combine in himself "the anecdotal facility of Suetonius or Saint-Simon with the loaded brevity of Tacitus and the judicial irony of Gibbon," clearly indicates the very pitfalls which the writer of this life has adroitly escaped. Nothing could be easier than to take too seriously an existence rich enough in fantastic episode or wayward adventure to rival D'Artagnan or Dantès. The Richardsonian moralist might look aghast on a private and professional record in some of its aspects as free from ethical nicety as Casanova's; though, unfortunately for the preacher, distinctly wanting in moral edification, seeing that there shone upon Dumas for fully thirty years the undimmed sun of popularity and success. All this part of a far from model career Mr. Davidson handles lightly, deftly, yet without waiving of deeper issues. He seems to understand better than many English critics the elastic adaptability of moral contexture in what might be called the temperamental outfit of the artist. Declining with equal judgment and taste to give in detail the voluminous *chronique scandaleuse* of private life, he enlivens his pages on this inevitable topic with truly un-Puritanical humor. In reply to a naïve comment by the "Comtesse Dash" on the unsatisfactory marriage of Dumas, he has a characteristic remark. To have been perfectly happy with such a man, says the "Comtesse," his wife should have had "tact enough to shut her eyes to his pranks, . . . she should have humored his love of mystery and intrigue, she should have been always on the point of discovering things and yet never have discovered them, and above all she should never have indulged in any scene of jealousy." Mr. Davidson has doubts as to the mortal possibility of such a paragon; and we may in our turn ask what Dumas ever did to justify the assumption that he might have been deservedly mated with a long-suffering angel (p. 207).

Dumas's methods of literary collaboration form another subject for sensible discrimination. The present volume devotes several pages (170-175, 244-256) to examination of the alleged facts, which undoubtedly show that in Dumas's mind the relations of debit and credit in a literary account might be handled in the liberal fashion of his lax financial bookkeeping. As to the real originality of his work and the slanderous malignity of envious De Mirecourts and others, we may well say of the fellow-members concerned in joint productions,

> " . . . vous leur fites, seigneur,
> En les croquant, beaucoup d'honneur."

Not one of the assistants showed more than mediocre creative talent when working independently. The referring of such questions to the law courts ends, as it recently did in our country, in making a laughing-stock of at least one of the litigants, and possibly of the judiciary as well.

The contrast between the two biographies is emphasized by noting their respective attitudes towards Dumas's efforts to reach the Academy, and their failure. Mr. Spurr, genuinely British in prejudice and expression, is incapable of seeing in that institution anything else than the "triumph of literary convention and snobbery" (p. 280). His competitor, with sounder knowledge and incomparably choicer language, says:

"As we foreigners have often to be reminded—the French Academy is a club with somewhat strict conditions of membership, and to these Dumas hardly conformed. . . . Personal considerations weighed . . . against one who had no certain banking account, who was indiscreet in word and deed, and undignified in demeanor, one, in short, who—with his Mélanies and Idas too much in evidence and too much talked about—lacked that outward respectability which is the chief of all Academic qualifications" (pp. 212-213).

Mr. Davidson is, nevertheless, fully disposed to do justice to the delightful qualities that endeared Dumas to his multitudes of friends, whether worthy or unworthy; the testimony comes both from the gravest sources and the "imperfect, undistilled biography" of gossip. Could the great Alexandre fail to win friends when showing such amiable irresponsibility as is recorded in the following episode? During the street fighting of 1830, Dumas, under a sudden impulse, headed a bob-tailed mob making for the Hôtel de Ville, but found the way blocked by a mass of soldiers:

"Prudence dictated a halt and a parley. As leader, Dumas stepped forward, and was met by a captain, from whom he requested permission for himself and his men to pass. In reply to the usual questions as to his destination and object, he declared that the one was the Hôtel de Ville, and the other to fight. The officer laughed outright. 'Really, M. Dumas, I didn't think you were quite as mad as all that.' If it was ruffling to be called *fou*, it was gratifying to find one's name known to the gallant captain, who explained that he had been to see 'Christine' one night when Dumas, who was in the house, had been pointed out to him as the author. 'That being so,' said Dumas, 'we can discuss this matter as friends.' 'Exactly what I am doing,' replied the officer, 'and as a friend I advise you to disband your men and get off quietly.' 'Well, I'll go back and talk to them about it. Many thanks for your kindness; good-bye, and, by the way, don't forget to come and see my next play; if you want tickets for the first night, send to me at 25 Rue de l'Université.'" (p. 117).

Dumas's literary achievement occupies its full share of space in this volume, though not much substantial weight is added to the vast bulk of critical literature on the subject; the author of 'La Tour de Nesle' and 'Monte Cristo' being one of the happy few whose permanency is settled by no body of critical doctrines ever yet devised. As Thackeray puts it in his first "Roundabout Paper": "Novels are sweets. All people with healthy literary appetites love them—almost all women; a vast number of clever, hard-headed men." In recognizing this, Mr. Davidson rarely drops his light-handed manner when treating of works whose vitality has never depended, can never depend, on the test of a serious critical analysis. It is surely futile, for instance, to debate gravely either the general ethical drift of "Antony," or the inferences to be drawn from the sensational wind-up of this play;

its author's own description of it as a drama of passion relieves us from the duty of looking for a "thèse." The "halo of false martyrdom" which Mr. Davidson would have us see in the fate of Adèle is not implied in the play itself, whether read or acted in the spirit of true interpretation. But the share of attention given in this volume to Dumas's dramatic work is, in the eye of an English reader, excessive; for, with us, contemporary drama holds by no means the exalted position which it occupies in France; nor, save for their marvellous rapidity of movement and the strong dramatic coloring of many of their scenes, do the plays of Dumas *père* seem to warrant anything more than the highest order of melodramatic success. The same qualities set off by sprightliness of dialogue keep some of his comedies alive. The chapters entitled "The Great Novels" and "The Monte Cristo Epoch" are in the nature of synopses, rather than of critical studies, which, indeed, those famous books would hardly justify. As for the fragmentary "Isaac Laquedem," representing Dumas's efforts in the direction of philosophical romance on a large scale, candid examination compels the conviction that its suppression by the Censor was an arbitrary kindness to the author's reputation. Who can doubt that Dumas was here slyly endeavoring to outdo Eugène Sue and Balzac together by uniting their totally divergent methods in a single gigantic incongruity?

The point specially emphasized in Mr. Davidson's treatment of the novels concerns not so much the vivid light with which Dumas could surround historic scenes and characters, as the fundamentally sound impression of history and important relations in the past which are generally to be found in his works:

> "What impression of the main characters and events of French history will these romances leave on a reader who knows French history only through them? Will such an one on the whole see right? Doubtless, yes. About the course of religious strife, of domestic intrigue, of foreign policy, he will gather little that 'serious history' will have him unlearn" (p. 222).

The same order of praise has often been bestowed with equal liberality on Dumas's acknowledged master in fiction. Should any writer of "serious history" feel constrained to dispute the claim of either, we may safely leave him to be dealt with by Mr. Davidson, whose undeniable capacity for brilliant biographical study has not been allowed to mislead his judicial sense.

## THREE NOVELS.

*Confessions of a Wife.* By Mary Adams. The Century Co. 1902.

*Doctor Bryson.* By Frank H. Spearman. Charles Scribner's Sons. 1902.

*Out of Gloucester.* By James B. Connolly. Charles Scribner's Sons. 1902.

With Mr. Laurence Housman in mind, and reflecting that what man has done with profit, man may do, we will not venture to say that no man could have written the 'Confessions of a Wife.' There is a type of fiction, the purely emotional, which has been found to sell all the better for an air of verisimilitude. The absence of a name from the title-page was one of the best advertisements of the 'Englishwoman's Love-Letters,' and in the present case "Mary Adams" is confessedly a nom de plume. But there is no doubt whatever that the book was written for women, and those who agree with Professor Münsterberg will see in it a fresh confirmation of their fears for an American literature which bears the *cachet* of feminine taste and standards. At the time of Mr. Housman's *succès de mystère* we were assured by more than one American woman that the situation described in the 'Love-Letters' was typically British, or, at any rate, European; that, in fact, no high-spirited American would have furnished that spectacle of sentimental slavery to an unresponsive object. But Marna Herwin is of a constancy beside which the "Englishwoman" appears flippant. We confess, for our part, that, in reading the "Book of the Heart," as the heroine prefers to call her diary, our sympathies were all on the side of Dana Herwin. What patience could support the emotional *gaucherie* of a woman who addresses her husband as "Thou Strongest," and signs herself "Your Wilderness Girl in Chains," in notes that meet his eye in unexpected places at the rate of three a day? "Darling," begins a "Second Note," "will you mind two notes from me? I will slip this one under your pillow, so you will find it later than the pincushion one" (p. 94). The Marna type of woman does not profit by experience. On page 152 she writes: "Will you be patient with one of my constitutional notes? It is a good while since I have written you any, for I see that they sometimes annoy you in these days." She goes on to ask her husband what he means by underlining an allusion to a "wearing woman" in a book that she was reading. We are already some months from the day when she wrote: "Thou Glorious! . . . here alone in my rose-colored room, my soul turns to thee as if thou wert a god upon a cloud." We are told later that it was about this time that Dana Herwin began to take morphine.

There are passages in the 'Confessions' that almost incline one to the theory that the book was written as a savage study of the disastrous results of sentimentalism uncontrolled by a sense of humor. The sentiment is always overdone, but it touches caricature when Marna writes, "To Ina in Heaven," "You would have been my bridesmaid, . . . you would have worn a robin's-egg-blue silk mull." We pass over the lyrical treatment of a certain ruby ring called "Heart of the Wife," and content ourselves with a mere mention of what may be called the "ruby gown" *motif*. On page 7 Marna "loves to get into a ruby gown and write like this"; a little later we are told that "my ruby gown, especially the velvet part of it, seems to understand me," and, in fact, for three years the appearance of the ruby gown marks a sentimental crisis. The writer probably intends the reading public to sympathize with Marna, "whom nobody understands," but a woman whose exacting sentiment drives her husband to Montevideo and morphine deserves the consequences. Dana Herwin's return and the stages of his cure from the morphine habit are not badly described. He returns, a broken-spirited man, to a series of reconciliation scenes, and we are left with a characteristic view of his wife: "I got into my ruby gown—the dear old faded thing. I wrote the note and slipped it into his hand, and evaded him and left him to read it."

The hero of 'Doctor Bryson' is a Chicago oculist, and the heroine and all the minor characters are his patients. Two-thirds of the book is taken up with minute descriptions of operations and illness. Two children are introduced in order that one may die of malignant croup and the other go through "Tonnesco's operation" and diphtheria. The hero barely recovers from pneumonia, while the heroine, who to our infinite relief seemed about to escape with simple astigmatism, ends as a star case of hysterical amblyopia. Mr. Spearman is so preoccupied with the pathological that he cannot mention a typewriter, who is of no further consequence to the story, without telling us that she has "lips that breed hemorrhages." The tale itself is a mere thread on which to hang descriptions of up-to-date surgery. It is not Mr. Spearman's realism to which we take exception; in the description of the horrors of disease he is easily surpassed by D'Annunzio. But we forgive D'Annunzio for certain passages, when we do forgive him, because of the undeniable beauty and power of the rest. 'Dr. Bryson' is not a work of art, and it does not fulfil one of the chief functions of a work of fiction, which is, surely, to entertain. It is, however, written with a certain force and power of description, and the picture of boarding-house life in Chicago is dreary enough to be true to life.

'Out of Gloucester' is the rather awkward title of six short stories of the adventures of fishermen of Gloucester and their like. They are written with great spirit, and can be recommended to all who enjoy thrilling tales of sea life. All the stories but one illustrate the racing powers and seaworthiness of the Gloucester fishing-boats, and the daring (not to say foolhardiness) of their skippers in eluding British cutters and poaching within the three-mile limit. "A Fisherman of Costla" is laid in Galway Bay, with which the author is evidently familiar. He is wise in not attempting to reproduce the native dialect; but he should not make an Irishman speak of an outside car as a "jaunting-car," a word never heard from Irish lips; nor is an Irishman likely to call a train "the cars" (p. 118). But these are slight slips in a realistic description of an extremely risky sail in a "hooker" to the Arran Islands from Galway. Mr. Connolly's stories often remind us of 'Captains Courageous,' though he is less interested in the fishing trade of the Gloucester men than in their ability to handle their boats and race them under full sail, regardless of rough weather.

*A Treatise on Title-Pages.* With Numerous Illustrations in Facsimile, and Some Observations on the Early and Recent Printing of Books. By Theodore Low De Vinne, A.M. The Century Co. 1902. 12mo, pp. xx, 486.

This third volume in the series entitled "The Practice of Typography" is built upon a last-year publication of the Grolier Club. Now, withdrawn from that exclusiveness, the essay is offered to the public with a change in proportion. The practical part has been greatly enlarged for the benefit of all who pursue the typographic calling, but also to the immediate advantage of authors and for the general cultivation of taste respecting the art of book-making.

The subject is limited in effect to title-

pages set with type, and their evolution is traced from the printer's colophon at the end of the book (the place still occupied in English usage) to the present time. The French were the first to shift the printer's device from rear to front, and this practice was revived in 1840 by the English Pickering. The German Ratdolt, practising his craft in Venice, first employed engraved borders. Title-pages engraved on copper were indigenous in Italy, which contributed very little to displayed title-pages. Some time before 1840 Didot in Paris contrived the condensed type for title-pages, and to this day Mr. De Vinne finds the average French title-page more attractive than the British or American; the Germans are out of the count, because their Gothic capital letters are intractable.

In part ii. the modern title-page is considered in all its bearings, with some citations of rules and more suggestion of the true principles of composition, with a rich array of actual examples in facsimile, faced now and again by critical resettings—in one case by six. Part iii. is specially designated "Critical," and, among other things, reviews the Kelmscott typography in the light of Morris's avowed aim to produce books not only having "a definite claim to beauty," but "easy to read." Mr. De Vinne cannot think this end to have been attained. He points out some of the difficulties which Morris encountered from his own fonts, and gives unqualified praise only to the presswork, which no fifteenth-century printer surpassed.

All this is illuminating without being dogmatic. We particularly call attention to what is said *passim* about the legibility of masses of lines set in capitals, and about amateur invention of letters in the name of decoration. It should be taken to heart by publishers of magazines who offend every canon of typographic taste by printing poems, not only smothered in futile ornament, pictorial or arabesque, but made absolutely unreadable by being lettered by hand. It passes our understanding how the poets themselves can tolerate such treatment—above all, as often happens, on a first appearance. With most of Mr. De Vinne's likes and dislikes we find ourselves in accord. He always has in mind the parallelogram which conditions the printer's liberties with symmetry; he is radically sound as regards spacing, and emphasis, and the mixture of fonts. His own compositions are irreproachable. Sometimes we could wish for a little more color, and we rather sympathize with the French habit of securing this, even when the stress has to fall on the less significant word. Nor do we feel averse to dashes, at least to the same extent as our author. In objecting *in toto* to the use of the ampersand, he appears to us to overlook its possible decorative function; and we answer his inquiry why should we suffer it in a title-page when we exclude it from the text, by alleging the exigency of space and balance, which is no concern of the ordinary letter-press. The ruled border, again, we have a soft side for, but with reserves: if Fitz-Gerald had in mind those which passed muster with his publisher, we cannot wonder that he invited Wright to "spew at Quaritch's ornamentation." The book closes with ten instructive variations on one theme by Mr. Jacobi of the Chiswick Press. The sixth, seventh, and eighth of these suggest an escape from the weakness too often shown in the regulation three-line publisher's imprint.

We commend once more the present volume, and the series, to all who take an interest in the history and the high maintenance of Gutenberg's gift to mankind. They are a mine of curious information and illustration.

---

*Dante and the Animal Kingdom.* By Richard Thayer Holbrook. Macmillan (Columbia University Press).

The diversity of Dante's admirers furnishes perennial proof of the great Florentine's many-sidedness. A new illustration of this comprehensive charm appears in the above volume. Here we find an author who has nothing but contempt for mediæval science, who misses no opportunity to sneer at dogmatic theology, who repeatedly confesses a lack of interest in the essential features of the "Paradiso," who shows (in this work at least) no sympathy with allegory, but is nevertheless so fascinated by external beauties, the by-play of Dante's genius, that he is willing to devote himself, with "lungo studio" and presumably with "grande amore," to the production of a new Dante book. Let it be said at once that the book is an excellent one: as a collection of valuable material it will long be indispensable to the specialist, and as reading for the general public it ought to prove entertaining even to those entirely unacquainted with the 'Commedia.'

The author's "Animal Kingdom" includes not only man and the lower beasts, but also the devils and the angels. While these latter creatures cannot, by any extension, be called animals, they are in some ways so closely connected with the subject proper that the omission of them would have left a distinct gap. Dr. Holbrook's great merit is to have set clearly before us the mediæval attitude toward animals, and to have interpreted all the references that Dante makes to beasts in the light of the strange folk-lore that had gathered about them. He finds Dante more conventional, in his use of animal traits, than has generally been supposed; in many cases, however, he concedes to his poet direct personal observation. Even when imitating, Alighieri generally contrives to stamp the copy with his own mark. "Dante," says our author, "has known how to give to a mere literary reminiscence an energy that few writers can impart from the observation of real life." As far as we can ascertain his own preferences, the Florentine, according to Dr. Holbrook, would seem to have been indifferent to horses, to have disliked dogs, hated wolves, despised sheep, and admired falcons, which he described with great accuracy. Dr. Holbrook also excels in his chapter on "Falconry," where he succeeds in illuminating the episode of Alichino and Calcabrina.

In his endeavor to say something about every animal mentioned by Dante, the author occasionally (as in the chapter on the goat) fills in with irrelevant matter, or (as in the treatment of the ass) indulges in somewhat fantastic speculation. In general, however, the work is very substantial; and while no important contribution is made to the solution of any of the great problems, a clear and constant light is shed upon all of Dante's beast-shapes, making them appear in their true mediæval aspect. There are eighteen well-chosen illustrations, nearly all belonging to the Middle Ages; the three colored plates are decidedly attractive, but the most interesting, perhaps, are the "Christ of Salerno," the "Three-Headed Satan," and the "Generation of Vipers."

The chief defect of the book (in the eyes of a reader perhaps unduly serious) is its unsympathetic levity of tone. One is constantly jarred, and either amused or pained, by such flippant passages as these: "In thirteen hundred years the world above him has made some changes in divinities and demons, and Charon, son of Erebus, feels that he must obey the new régime. . . . After thirteen hundred years, Minos has grown a tail." A few small inaccuracies and omissions may be noted. On page 24 we read: "It is interesting to learn from what Dante says later [in 'De Vulgari Eloquentia'] that the serpent must have spoken Hebrew." But Dante corrects the statement in question in the "Paradiso," xxvi, 124. From the description on page 55 one would infer that the Minotaur was in immediate proximity to the Centaurs, instead of being separated from them by a mighty precipice. The "acqua" outside the City of Dis is called on page 211 a "marsh *of heretics*." On page 242 the tale of Aucassin is assigned without comment to the twelfth century. In several places one misses a reference to the 'Magnæ Derivationes' of Uguccione da Pisa, recently discussed by Paget Toynbee. In the note on Ciacco (pp. 177-8) might have been inserted the title of Scherillo's article in the *Nuova Antologia* (xciv, p. 427). The story of the whale mistaken for an island (p. 204) occurs in the first voyage of Sindbad the Sailor; it may be worth while to state that the same yarn is contained in the Provençal bestiary published by Appel in his 'Chrestomathie' (p. 204). Good evidence of the existence of fish-ponds in the gardens of rich Italians (p. 217) is to be found in the sixth story of the tenth day of the 'Decameron.' In connection with Bernart's poem, "Quant vei la lauzeta mover," reference might have been made to Smith's 'Troubadours at Home' (II., p. 162), where we find an English translation and the original music of this beautiful song.

---

*The "Times" History of the War in South Africa.* Vol. II. New York: Charles Scribner's Sons. 1902.

The second of the six handsome volumes which are to constitute this history is, like its predecessor, illustrated with excellent maps, and with fine photogravure portraits of notable persons on both sides of the contest. The series is edited by L. S. Amery, fellow of All Souls, while the narrative is written by several members of the *Times* staff of war correspondents.

The most distinctive feature of the present volume, aside from its use of much important material made especially available since the close of hostilities, is its searching criticism of the organization of the British army at the outbreak of the war, and of the conditions, both among responsible officials and in public opinion, which prepared the way for the deep humiliation of the British nation which attended most of the activities in the field, down, at least,

to the period at the end of 1899 when Roberts superseded Buller upon the heels of the disaster at Colenso. In many respects this criticism is profitable to the American patriot, as offering a parallel to the attitude of our political managers towards a scientific preparation for war in time of peace. Witness our mortification at the beginning of the war with Spain, when the only evidence our nation was able to present of its readiness for the belligerency into which the Jingoes precipitated us, was the resourceful body of regular troops who had been so long accustomed to fight under adverse conditions that no neglect of civil functionaries could prevent them from carrying off the only laurels won in our land operations.

The editor of this history recognizes that the British army had made a long stride towards reform of its ancient deficiencies when, after 1875, purchase of commissions was displaced by competitive examination, a bureau of military intelligence was established, and field manœuvres were systematically undertaken. But there improvement practically ended. The Staff Intelligence Department was limited to an entirely insufficient number of officers, with an annual appropriation for its maintenance of about £11,000 as contrasted with some £270,000 a year devoted by the German Empire. Little encouragement was given to officers to widen their professional knowledge and to fit themselves for emergencies. Most of their time was thrown away upon foolish ceremonies, petty accounting, and like routine bookkeeping.

The periods of service of the rank and file were so ill-suited to the taste and peculiarities of the British people, that the standard of recruiting had to be several times lowered to meet the impossibility of securing first-class material, and the ranks became a nursery for "lower-class wastrels." Under fairly good treatment, this inferior stuff was converted into a pretty well-disciplined force for show or for the old-time methods of attack in close column. But there was scarcely any drill in marksmanship, no spirit of personal initiative in critical moments, and so intimate a dependence upon the leadership of the officers that when these failed (and for the new warfare they were almost as ignorant as their men), the regiments were as flocks without a shepherd assailed by wolves. "Many of the generals were nothing more than aged regimental officers, with brains and will power atrophied by a long life spent in unmilitary routine; incapable alike of devising a plan or carrying it into execution."

On the other hand, the apparent disgrace of a necessity of putting into the field more than 200,000 British troops to bring to terms less than 60,000 Boers is reduced when it is considered that the latter were in truth trained warriors, habituated to all manner of self-reliance and courage by constant battle, not alone with wild men armed with bows and spears, but with organized natives equipped with modern firearms and often proving themselves a formidable adversary for any fighting troop of white soldiers. In short, the Boers were amply prepared for the sort of warfare which they were required to wage, with the added vigor always given to defenders of their own firesides; while the British carried to strange, unwonted situations the traditions of European highways and fortified towns, or of warfare with Asiatics whose prowess they not illegitimately held in contempt. Happily for their final fortune, the school of calamity was for the British an effective instructor.

The unmilitary student of such volumes as these may draw from their discussions the lesson, which Americans ought to have learned from dear-bought experience, that a democratic government, whether in England or the United States, is, of all political systems under the sun, the least suited to wage warfare, if economy and prompt efficiency are to be taken into reckoning.

---

*Seven Roman Statesmen of the Later Republic.* By Charles Oman, M. A. With portraits and illustrations. Longmans, Green, & Co. 1902.

Midway between history and biography, Professor Oman has written one of the most readable books which have recently appeared on the subject of the later Roman Republic. Whether one can always agree with his estimates of the statesmen concerned or not, those estimates are definitely conceived and clearly presented. As a sample of his effective characterization, Tiberius Gracchus is described as having "enough brains to see that the times were out of joint, enough heart to feel for the misfortunes of his countrymen, enough conscience to refuse to leave things alone and take the easy path to success that lay before him, and enough self-confidence to think that he was foreordained to set all to rights." But he failed as a leader because of his emotional temperament, his impatience of opposition, and his utter inability to appreciate an opponent's point of view as well as his own. After all the honors which have fallen to the lot of Cornelia down through the centuries, it makes one gasp to hear her son described as "cursed with a mother who was always reminding him that he was the grandson of Scipio the elder." The various schemes for agrarian reform were doomed to failure, Professor Oman thinks, because the statesmen of the time were not sufficiently trained to see where the roots of economic distress really lay. After the Gracchi, are considered in turn Sulla, Crassus, Cato, Pompey, and Cæsar, and along with their personal fortunes one gets a fairly connected sketch of the development of Roman politics for the period covered. Joined with the gross personal vices of Sulla our author finds enough of the old Roman political virtues to bracket him with Cato as unselfish in aim, looking for no personal profit, and devoting his life to his party and his theory of the Constitution. His reformed Constitution failed in the end for lack of motive power, not from flaws in the mechanism. The clock could not go on ticking without the repairer's hand to give the pendulum an occasional push. Cato is energetically defended against Mommsen's ridicule. (Who does not dare an occasional hostile sally into Mommsen's territory now?) Cato was "a thoroughly successful minister of finance, and an excellent and practical soldier." But for the way in which he was foiled by mean and petty spirits, his efforts at reform might have had large and permanent results to their credit. Cæsar is lashed severely for his "Anti-Cato," a rather discreditable post-mortem revenge upon "the one man whom he could not bend" while living.

Mommsen's idealized Cæsar of course comes in for radical rectification. Pompey is held up as his superior, both directly and by implication, in many qualities of personal character which are rightly sought in a really great nature. The level of Pompey's life was above Cæsar's debauchery, above his cruelty, though he failed in the great crisis because he could not read the signs of the times, and did not quite know what it was that he was blindly groping after. Cæsar was a brilliant opportunist, cruel or clement as his policy might demand, dealing sanely and practically with problems as they arose, but without a single trace of real unselfishness or idealism. "Cæsar the altruist is a fiction of the nineteenth century." The Dictator of B. C. 45 "was but the debauched young demagogue of B. C. 70, grown older, riper, and more wary." Even at the age of fifty-four he was "ready to lapse into undignified amours with a clever and worthless little Egyptian princess." Here again one gasps. Surely the dignity of Horace's great ode, "Nunc est bibendum," is more in accord with the real significance of Cleopatra than this flippancy.

Professor Oman regards the Empire as the inevitable outcome of the Republic as it existed during its last century, but not at all an ideal solution of the problems which the decaying Republic had set. Cæsarism conferred countless practical benefits, especially in improving the hard lot of the provincials, but its gifts were purely material. To an age of lost ideals its founder could give no new moral impulse, for he had himself lived down, or had never possessed, any controlling enthusiasm save personal ambition. The Stoic philosophy was the only moral force in existence, and it influenced only the few choice spirits, not the mass. Even a vigorous national patriotism was impossible, despite the efforts to stimulate its growth. The conclusion of it all is that, but for the attacks from without and the new influence of Christian ideals within—both forces for which Cæsarism did not provide—the Empire must gradually have sunk into some such stagnant civilization as that of the Chinese.

**SOME AUTHORITIES ON**

# Edgren's Italian and English Dictionary.

With Pronunciation indicated by subscript signs, and with brief Etymologies. By HJALMAR EDGREN, Ph.D., assisted by Giuseppe Bico, D.C.L., University of Rome, and John L. Gerig, M.A., University of Nebraska. 576+452 pp. 8vo, $3.00 *net*.

*Prof. J. D. M. Ford*, of Harvard.

"It marks an advance over all other Italian-English Dictionaries, especially in its method of indicating the qualities of accented *e* and *o* and the voiced and voiceless values of *s* and *z*. I shall recommend it to my classes."

*Prof. Geo. M. Harper*, of Princeton.

"It is so well done and was so sadly needed that I feel impelled to congratulate you, and through you Dr. Edgren himself, for performing what seems to me a great service to students of Italian. . . . At last we have an Italian-English dictionary which does not copy the old mistakes of its predecessors and which, moreover, is printed in large legible type. Not content with achieving success in these essentials, you have gone further than most makers of 'translating' dictionaries, and have produced an etymological lexicon at the same time. The mnemonic helpfulness of etymologies in learning a foreign language is not to be overlooked, and has been, I think, one of the chief advantages of Whitney's German-English dictionary."

*Prof Oscar Kuhns*, of Wesleyan.

"For years I have been looking for a decent, up-to-date Italian-English Dictionary. I have just found it in Edgren's Dictionary."

*Dr. Kenneth McKenzie*, of Yale.

"It is in every respect superior to the Italian-English Dictionaries already existing . . . The arrangement, made familiar in Edgren's French Dictionary, is practical and I regard the etymological feature as valuable."

*Prof. M. V. Young*, Mt. Holyoke College.

"Very satisfactory and to be introduced here. The Dictionary has been for years a desideratum."

*The Transcript*, Boston.

"A valuable Dictionary, carefully and scientifically prepared according to the most modern lexicographical theories, and forms a handy reference book for the library or desk."

Henry Holt & Co.,

29 W. 23d St., New York. 378 Wabash Ave., Chicago.

*NOW READY*

# THE CHARACTERS OF THEOPHRASTUS

**A New Translation with Introduction, etc.**

By CHARLES E. BENNETT and WILLIAM A. HAMMOND, Professors in Cornell University. 16mo. *Nearly ready.*

LONGMANS, GREEN, & CO., N. Y.

# *NEW AND FORTHCOMING PUBLICATIONS OF G. P. PUTNAM'S SONS*

## *SONNETS FROM THE PORTUGUESE*

By E. B. BROWNING. With 50 illustrations and decorations in color by Margaret Armstrong. 12mo. Cloth, $2.00; one-half vellum, $2.50; red leather, $3.00; full vellum, $3.50; gold-stamped satin, $4.00.

One of the most beautiful holiday books ever printed.

## *THE HUDSON RIVER*

From Ocean to Source. By EDGAR MAYHEW BACON, author of "Chronicles of Tarrytown," etc. 8vo. 100 illustrations, including a sectional map of the River. Net, $4.50. (By mail, $4.80.) *Next week.*

## *THE ROMANCE OF THE COLORADO RIVER*

Being an account of the discovery and of the explorations from 1540 to the present day, with particular reference to the two voyages of Powell through the Great Canyon. By FREDERICK S. DELLENBAUGH, author of "North Americans of Yesterday," etc. 8vo. Fully illustrated. Net, $3.50. (By mail, $3.80.) *Next week.*

## *FAMOUS HOMES*

Library Edition. Two vols. Royal 8vo, in a box, net, $7.50. Vol. I.—Famous Homes of Great Britain and their stories, describing, among other castles, Lyme, Battle Abbey, Blenheim, Cawdor Castle, Holland House, Charlecote, Chatsworth, Belvoir, Warwick. Vol. II.—More Famous Homes of Great Britain. Among others described are Cotehele, Knole, Blickling, Mt. Edgcumbe, Wilton, Naworth, Inverary.

## *ROBERT HARLEY*

The Life and Times of Robert Harley, Earl of Oxford, together with a study of the literary and political conditions of the Reign of Queen Anne. By E. S. ROSCOE. 8vo. 16 illustrations. $2.50. (Ready next week.)

## *WILLIAM MORRIS*

Poet, Craftsman, Socialist. By ELISABETH LUTHER CARY, author of "The Rossettis," "Tennyson," etc. 8vo. 39 illustrations, including one in color and 13 photogravure plates. Net, $3.50. (By mail, $3.75.)

## *THE PAPAL MONARCHY*

By WILLIAM BARRY. Number 64 in the "Story of the Nations" series. 12mo. Fully illustrated, net $1.35; half-leather, gilt top, net $1.60. Postage 15 cents.

The rise and fall of the Hierarchy, the characters and careers of the Pontiffs and the results of Papal influence on history during the period 590 to 1303, that is, from Gregory the Great to Boniface VIII., is the subject of Dr. Barry's most excellent volume. (Ready next week.)

## *ITALIAN LIFE*

In Town and Country. By LUIGI VILLARI. No. 7 in Our European Neighbours Series. 12mo. Illustrated. Net, $1.20. (By mail, $1.30.)

A delightful book in a delightful series. "Full of information, comprehensive, and accurate."—Syracuse Herald.

## *THE YOUTH OF LA GRANDE MADEMOISELLE (1627-1652)*

By ARVÈDE BARINE. Authorized English version by L. G. MEYER, with about 25 illustrations from contemporaneous sources. Net, $3.00. (By mail, $3.25.)

All French history is interesting; but there are few pages so fascinating as the kaleidoscopic career of La Grande Mademoiselle. Her memoirs give unique and valuable pictures of life at the Court of Anne of Austria, and of the wars of the Fronde.

## *RHODE ISLAND*

Its Making and Its Meaning. A Survey of the Annals of the Commonwealth from its Settlement to the Death of Roger Williams, 1636-1683. By IRVING BERDINE RICHMAN, author of "John Brown Among the Quakers, and Other Sketches," etc. With an Introduction by JAMES BRYCE, M. P., D. C. L. Two volumes, 8vo. With maps, net, $5.00. (By mail, $5.50.)

Information About Everything—A Summary of All Knowledge—The Essence of All Learning—May be Found in

# THE NEW INTERNATIONAL ENCYCLOPÆDIA

**Now in Course of Publication. 17 Royal Octavo Volumes, 15,000 Pages.**

**EDITORS**

**Daniel Coit Gilman, LL.D.,** President of Johns Hopkins University (1876-1901) President of Carnegie Institution.

**Harry Thurston Peck, Ph.D., L.H.D.,** Professor in Columbia University.

**Frank Moore Colby, M.A.,** late Professor of Economics in New York University.

Assisted by Nearly 200 Eminent Editors and Contributors.

## NEW ALL THROUGH.

It is the ONLY NEW ENCYCLOPÆDIA published in English during the last ten years.

It is planned on new lines, giving the newest and latest advances in science, invention, discovery, full of new illustrations, and the most recent facts.

COMPREHENSIVE, CONVENIENT, ACCURATE, CLEAR.—It covers all branches of knowledge. It is arranged alphabetically throughout, with abundant cross-references. Every resource of modern scholarship and research has been used to make the information reliable and up to date.

It is copiously and richly illustrated with full-page plates—100 in color — cuts in the text, maps and charts. The illustrations alone if brought together would make a volume the size of Webster's Dictionary. The maps are complete and embody all the latest changes in Geographical and Po itical boundaries; special charts show graphically the facts of Historical interest, Mineral deposits, Agricultural products, etc.

## QUEST of the HOLY
# GRAIL

makes a sumptuous new book, beautifully illustrated with the entire frieze decoration in the Boston Public Library. The pictures are, with a single exception, of full-page size throughout, comprising the fifteen frieze panels and eleven most interesting drawings and studies of details. The frontispiece is a photogravure, the rest of the pictures being attractively done in tints. The text is by Ferris Greenslet, Ph. D., associate editor of the *Atlantic Monthly*. His interpretation and paraphrase of the Grail legends makes a clear, readable, and illuminating accompaniment and explanation of the pictures.

It is a unique, handsome gift book, and is also of permanent interest and importance. Finely printed on choice Ruisdael paper, deckle edge, gilt top, cloth, $5.00 net; by mail $5.16. At the bookstores or of the publishers:

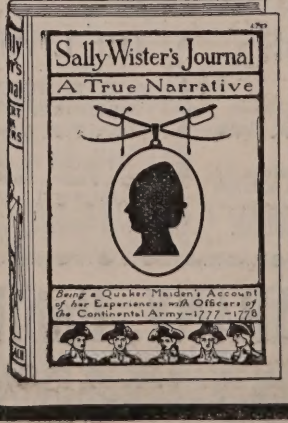
# Sally Wister's Journal

**A CHARMING HISTORICAL ROMANCE—A TRUE ONE**

SALLY WISTER, 16 years old, daughter of Daniel Wister, merchant, of Philadelphia, kept a journal of her experiences during the winter of 1777-1778, while exiled from Philadelphia during its occupation by the British. The family lived with relatives in an old farm house on the Wissahickon, which was occupied at times by various prominent officers of the Continental army, and was in the immediate vicinity of several important military operations. Sally saw much of the officers and heard much of the fighting, and comments on both freely and quaintly. Gen. Smallwood is "tall, portly, well-made: a truly martial air, the behavior and manners of a gentleman"; Capt. Furnival, "the handsomest face I ever saw, a very fine person"; Captain Finley is "wretched ugly"; Maj. Stoddert, "very reserved" but has "an engaging countenance and address," etc. Later the Major grows much less reserved. Another officer who throws off his reserve is Capt. Alexander Spotswood Dandridge, of Virginia, a relative of Martha Washington. Sally describes him in the Journal as "the handsomest man I ever beheld." He asks her if she is a Quaker, and on her saying "Yes," says, "Then you are a Tory," but this she vigorously denies. Gallantry, flirtation, sociability, war and humdrum country life jostle each other in the pages of this unpretentious journal, the whole making a picture of unequaled value for the historian—and of charm for the novel-reader as well.



Sally Wister's Journal
A True Narrative
Being a Quaker Maiden's Account of her Experiences with Officers of the Continental Army—1777-1778

It has been carefully edited from the original manuscript by ALBERT COOK MYERS, M. L., who has collected a great mass of material elucidating the text, and also many portraits, relics, documents, signatures and pictures relating to characters appearing in the Journal. It is beautifully printed on deckel-edge paper, profusely illustrated, and bound in antique style with a cover design by Walter Whitehead. *Circular on application.* ***Cloth, postpaid, $2.00***
***Gift Edition, Half-Levant, in Satin-lined box, $4.00***

# JUST PUBLISHED

## Literary Values

By John Burroughs.

A group of notable essays, presenting Mr. Burroughs' views on literature and life. They are so sound, so vital, so just in judgment, that the book is a distinct contribution to criticism and to literature. 16mo, $1.10, *net*. (Postage extra.) Also *Riverside Edition*, $1.50, *net*.

## Americans in Process

Edited by Robert A. Wood, Editor of "The City Wilderness."

This book is the result of study, by experienced settlement workers, of the process of turning foreigners into Americans in the North and West Ends of Boston. It is full of intimate knowledge of the subject and is based on long and intelligent study. $1.50, *net*. (Postage extra.)

## Where American Independence Began

By Daniel Munro Wilson.

This book has for its centre of interest the remarkable group of patriots—the Quincys, the Adamses, the Hancocks, and others—among whom independence was earliest anticipated and most effectually advocated. With nearly 50 illustrations, $2.00, *net*. (Postpaid, $2.14.)

## The Silva of North America

By Charles Sprague Sargent. Volumes XIII. and XIV. 4to, illustrated with 120 plates engraved in Paris from drawings made by C. E. Faxon.

The exhaustive and monumental work on the trees of North America begun by Professor Sargent in 1890 is brought to completion by these two volumes, the last of which contains an Index to the entire fourteen volumes. Price, $25.00, *net*, per volume. (Sold only in sets.)

## Molière

By Leon H. Vincent, author of "Hôtel de Rambouillet," "The French Academy," "Corneille," etc.

The latest addition to the very charming little books which Mr. Vincent has written on French society and letters in the Seventeenth Century is "Molière." This is the greatest figure in French literature, and his brilliant career is one of the most attractive topics in the range of literary history. 18mo, 85 cents, *net*. (Postpaid 91 cents.)

*READY NEXT WEEK.*

## Correspondence of the Colonial Governors of Rhode Island, 1729-1775

Edited by Gertrude S. Kimball.

The letters that form these two volumes cover the period of Rhode Island history from 1729 to 1775. Collected from the state archives and elsewhere, they present the official relations of the colony to England, and shed much light on the drift of public opinion and the gossip of international affairs. 2 vols. 8vo. Price per volume, $5.00 *net*. (Postpaid.)

## Life and Correspondence of Henry Ingersoll Bowditch

By his son, Vincent Y. Bowditch. With photogravure portraits and other illustrations.

These volumes contain the memoirs of one of Boston's most eminent and honored physicians. Dr. Bowditch took an active part in the exciting fugitive slave questions which agitated Boston in the forties and fifties of the last century, and the record of these and his friendship with Garrison, Phillips, Sumner and other leaders furnishes an interesting sidelight on the eventful period. 2 vols. 8vo, $5.00 *net*. (Postage extra.)

**HOUGHTON, MIFFLIN & CO., Boston and New York**

# E. P. DUTTON & CO.'S NEW BOOKS

## Constable and His Influence on Landscape Painting

By C. J. Holmes. With more than 70 photogravure plates. *Edition de Luxe*, 10 copies for America, printed on Japanese Vellum, with extra plates, $125.00 *net*. Edition, 100 copies for America, $35.00 *net*.

While no pains have been spared to give an accurate and impartial account of Constable's life and character, the main portion of this book has been devoted, first to tracing briefly the rise of naturalism in landscape up to the time of Constable's youth; then to study very carefully the influences under which the painter developed his own personal genius, and to examining thoroughly the true character of his achievement; and lastly to considering the variations and extensions of Constable's practice, which have had so much influence upon the landscape painters of to-day, both in Britain and on the Continent.

## Luca and Andrea Della Robbia and their Successors

By Maud Cruttwell. With over 150 reproductions, 8vo, $8.00 *net*.

This is one of the most beautiful art books of the year, dealing adequately for the first time with a very attractive artist. The study is a most valuable contribution to art literature, and is, as regards illustrations, a veritable treasure-house.

### The Shroud of Christ

By P. Vignon, D. Sc. (Fr.). Illustrated with Photogravure and Collotype Plates. Quarto, $4.00 *net*.

A full and exhaustive examination of the questions raised by the recent public exposition of the Shroud of Christ at Turin, and a careful analysis of the remarkable photographs taken of the Shroud by M. Pia. M. Vignon examines the matter in a thoroughly scientific way, and concludes the portrait on the Shroud is not the work of man, but is the effect of chemical action. M. Vignon puts forward scientifically the experiments made and the results obtained, and arrives at a conclusion which will be of absorbing interest to the world of science, Biblical students, and to all members of the Christian Church.

A descriptive circular sent free on application.

### An Anthology of Victorian Poetry

Edited by the Rt. Hon. Sir Mountstuart Grant Duff. 8vo, cloth, $2.50 *net*.

"Nothing could more feelingly attest the literary richness of the Victorian Reign than this Victorian Anthology, a carefully edited and handsomely printed volume, which well fills its honorable station and will commend itself for many reasons to collectors and readers of the best English poetry of the last century."—*Literary World.*

### A Grand Duchess and Her Court

By Frances Gerard. 2 vols., 8vo, $7.50 *net*.

"We commend this eminently readable work."—*N. Y. Tribune.*

"Such a memoir is history in the best sense and of the best sort. The work belongs to the very first class of historical biography."
—*Literary World.*

### Life and Letters of H. Taine. 1828-1852

Translated from the French by Mrs. R. L. Devonshire. 12mo, 326 pages, $2.00 *net*.

"This is a strong, manly, and healthful book—the picture of a noble mind, reflective and full of philosophy, particularly instructive and suggestive in a rushing, struggling, sciolistic age like the present."—*Daily Telegraph.*

### A Patrick's Day Hunt

By E. Œ. Somerville and Martin Ross, author of "Some Experiences of an Irish R. M.," etc. Illustrated in text and with 8 full-page color plates, oblong, $2.50.

A genuinely humorous piece by the well-known authors of "Experiences of an Irish R M." The story is illustrated by some excellent color plates, and the book makes an ideal gift.

*A New Work of Fiction by* Montgomery Carmichael

### The Life of John William Walshe

By Montgomery Carmichael, author of "In Tuscany." 12mo, $2.00 *net*.

"It is a charming book. It is in fact a peculiarly lovable book—a sort of John Inglesant, written by a man of poetic insight I took it up, fancying that it was merely a biography of an unknown man, which could interest only the man's friends, but I found it wonderfully interesting and charming."—W. L. Alden in *The New York Times Saturday Review.*

### Tiberius the Tyrant

By J. C. Tarver. $5.00 *net*.

"His picture of the early empire and its policy is illuminated by means of many comparisons, brilliantly drawn, between those days and our own. The book is one of manifold interest."—*Nation.*

"One of the clearest, best reasoned and most interesting historical studies we have read for many a day."—*Independent.*

### The Eldorado of the Ancients

By Dr. Carl Peters. Fully illustrated, 8vo, $5.00 *net*.

This last volume by the well-known African explorer deals with the period from 1896 to 1902. Among other things the author brings evidence to show that the "Ophir" of Solomon corresponds with South Africa.

### The Roadmender

By Michael Fairless, author of "The Gathering of Brother Hilarius." 12mo, 166 pages, $1.25.

"Musings of a thoughtful mind enriched by varied culture, in love with nature, in sympathy with the lowly, conscious of the Spiritual Presence inhabiting the world, and in peaceful accord with the Eternal Order."—*Outlook.*

## The Week.

Senator Lodge has introduced a bill to establish the gold standard in the Philippines. By refusing at the last session to concur in the House bill on this subject, he and his colleagues in the Senate have made themselves morally responsible for the loss of a very large sum (estimated at upwards of $1,000,000) by the Philippine Government, not to mention the losses incurred by private individuals through the decline in silver. Mr. Lodge and his colleagues are quoted as saying that the decline in silver was wholly unexpected by them. Of course, it was. Nobody supposes that they intended to deprive Gov. Taft of any part of the revenue of the islands. They thought they understood the subject on which they were legislating, but they failed to take account of the fact that silver has been on the down grade, with very slight interruption, ever since 1873. Or, perhaps, they thought that it could not possibly fall below the price it bore last July, when they were passing the Philippine Government bill. They left out of their reckoning the possible action of countries still on the silver standard—the Straits Settlements, Siam, China, and Mexico. But it is the unexpected which happens. In 1893 silver declined fifteen cents per ounce within three days after the announcement that India had demonetized it. What took place then might occur at any time when any country of equal importance should take similar action. The only country of equal magnitude still on the silver basis is China, and her attitude is uncertain. That of Mexico is uncertain also, for it is hardly credible that she should continue to do business on the principles of the blind pool as outlined in the decree of President Diaz of November 25. The reasons why she has not sooner abandoned the silver standard are that she is again the largest silver-producing country in the world, as she was in the time of the Spanish occupation, and also that the adoption of the single gold standard would involve an advance of the wages of the wretched peons.

---

Senator Cullom, by calling up the French reciprocity treaty on Monday, made a striking demonstration of the difference between reciprocity *in posse (i. e.*, in the President's message) and reciprocity *in esse (i. e.*, in the Senate). Everybody is willing to assent to the principle in the abstract, or "when conditions shall permit," or "whenever it may seem expedient"; but the moment you suggest an actual, a negotiated reciprocity treaty you have Depew protesting for the glovers, Hoar vociferous for the pinchbeck-jewelry industry, Lodge and Aldrich variously darkening counsel and making the worse the better reason. The scene was instructive. It showed that the Republicans of the Senate are unwilling even to discuss any matter that involves tariff reduction, and it proves to the many Republicans who have voted for serious reconsideration of the tariff schedules that they have been swindled out of their votes. It buries one spadeful deeper that hoary fraud, "the tariff revised by its friends." Senator Cullom says he will call up the French treaty next week. We sincerely hope he will do so. Every time the ultra-protectionists rise to that lure they will look more selfish as men and more ridiculous as statesmen.

---

Congressman Littlefield's so-called anti-Trust bill is free from Constitutional objections, and it offers the chance of taking one step towards the control of corporations engaged in interstate commerce which are large enough to be dangerous. All economists of note who have dealt with the Trust question in public discussion are agreed that the first step to be taken is to secure publicity of the affairs of Trusts, and that the proper method of controlling them is by the taxing power. In order to obtain data for the exercise of the latter power the former is a needed preliminary. Mr. Littlefield's bill provides that every corporation doing an interstate business and having more than $500,000 capital shall file with the Interstate Commerce Commission each year a statement of its capital stock and debt, with all particulars, the value of the property represented by the same, and the market value, together with the earnings, expenses, interest, dividends, taxes, permanent improvements, salaries, and wages paid. The Interstate Commerce Commission is to have power also to examine the officers of the corporation under oath touching these matters. In short, the same powers are to be exercised in obtaining facts as are now exercised in obtaining the facts from railroads engaged in interstate commerce, and by most of the States in dealing with local railroads. A tax of 1 per cent. per annum is to be imposed on so much of the capital stock of such corporations as consists of water. There is no reason why this bill should be called an anti-Trust bill, except that the Trust promoters are very much opposed to it, as the railroad men were to the Interstate Commerce bill when that was first proposed. Mr. Littlefield's bill has been reported favorably by the sub-committee of the House Judiciary Committee, and will no doubt be agreed to by the whole committee. It will then become the leading measure of the present session.

---

We trust that Governor-elect Pennypacker of Pennsylvania will hasten to explain away the latest painful aspersions on Senator Quay. It is a task for which Mr. Pennypacker alone, we think, is fitted, for he was the one who first discovered in Quay a greater statesmanship than that of Webster or Clay. Quay favors the admission of Arizona and New Mexico as States. He so yearns to number these Territories among the Federal sisterhood that it appears he wrote a letter advising that Democratic victories be arranged in each. This was in order to attract Democratic votes to the Statehood project. Quay's Republican associates opposed the admission of these Territories, but Quay stood firm as a rock. It caused comment, but what cared he? Now he is to join with the Democrats in a minority report, for the committee has reported a bill granting Statehood to Oklahoma alone. Somebody at Washington has suggested that Quay had some other motive than that founded upon his exalted statesmanship. Testimony before a Senate committee has even been raked up, indicating that the value of a mine in Arizona owned by a brother of Senator Penrose of Pennsylvania would be largely increased by the enactment of the omnibus Statehood bill, with the unkindly inference that perhaps other great men in Pennsylvania have a finger in the pie. These are the cruel rumors which we trust Mr. Pennypacker, Quay's official defender, will hasten to explain away.

---

Secretary Hitchcock's warning against the palpable land frauds in the West, together with the discoveries made in the investigations of the Federal grand jury now in session at Omaha, serves to attract attention to a disgraceful state of wholesale swindling in the disposition of the public domain. The actual settler, the man who would turn the sod and plant the seed, has been forced out of the open range by the covetous owners of cattle and sheep. The frauds by which they have sought control have been glaring and unconcealed. At first they attempted to scare the settlers by means of hostile demonstrations. His crops were destroyed, his stock driven off, and he was threatened with personal violence. But where one settler was forced out of the contest another took his place. There was always a settler looking over the barbed-wire fence, and eager for the cattleman's domain. It has been a common thing for the stockman of the

West to fence up thousands of acres that ddi not belong to him.

---

An end to this sort of robbery was inevitable. The cattlemen and their rivals, the sheepmen, sought to obtain a quasi-title to their land by a species of entry in which they were assisted by the cowboys in their employ. Every herder has entered his name as a homesteader, and he has an assurance that his claim of "residence" will be sworn to by some other cowboy, who will expect the same service in return. This is trifling compared with the swindling of the Government that has gone on under the "widow's claim" provisions. A widow of a soldier of the civil war may take up a claim without actual residence, obtaining a deed from the Government at the expiration of five years. On this basis rest many of the most patent frauds. Agents have secured the signatures of widows all over the Middle West who, in good faith, have made formal entry, and have agreed to prove up their claims five years hence. They have received or are to receive about $150 for their service. The cattle companies and the syndicates operating for them are to be the beneficiaries; and in the end will obtain, unless the deals are frustrated, vast areas at a merely nominal sum. It is estimated that during the past year in Nebraska alone, where the movement has been discovered as being most noticeable, the fraudulent entries have amounted to 1,000,000 acres. Congress should act, and make it impossible for a single acre of the public domain to go to individual owners except through the actual residence of a homesteader on 160 acres for five years, and his improvement of the land.

---

It is something of a shock to learn that "the President's friends" at Washington are a little worried about the delegates to the Republican National Convention to be held in 1904. We had supposed that the President and his friends felt as serene and comfortable about these delegates as if they were all elected and pledged and safely corralled in the Presidential headquarters, munching sandwiches, and figuring out the patronage to be distributed in the beautiful spring days of 1905. But we know now that the contrary is true, for our information is as nearly official as information about delegates ever is. Mr. L. T. Michener, formerly of Indiana, and still a political power in that State though now a resident of Washington, has let the cat out of the bag. A few days ago he wrote about thirty letters to knowing persons in Indiana asking their views. "It is believed," he said, "that Senator Hanna will try to get the Presidential nomination in 1904. Some of the President's friends are a little uneasy about it. Do you think Hanna could take Indiana away from Roosevelt—or Fairbanks?" And the worst of it is, the replies thus far received do not especially tend to quiet that little uneasiness of the President's friends. If Fairbanks is a candidate, he can have the delegates, the replies declare with striking unanimity. If not, Roosevelt and Hanna will have to fight it out. But there is a crumb of comfort—Hanna says he does not "want the job"; so perhaps it makes no difference about the Indiana delegates.

---

The announcement that Major Edwin F. Glenn, Fifth Infantry, of water-cure fame, is to be tried once more, proves in a gratifying way that the War Department has again been stung into action by those advocates of humanity who have been termed calumniators of the army. It is all the more apropos in view of President Roosevelt's inclusion in his message of his stump-speech defence of the army. Major Glenn's first trial for administering the water cure resulted in his conviction, and punishment by the ridiculous fine of $50. His second trial, it is reported, is the result of his having casually chronicled the fact that he had had several natives killed for misleading an American column. Apparently the circumstances of this killing were too much even for Secretary Root to stomach. Hence, Gen. Davis is to formulate charges and try the gallant Major. As we pointed out at the time of his first trial, Major Glenn's case is a particularly flagrant one, because he went to the Philippines in 1900, after the hard fighting was over. His offences could not, therefore, be charged to nervous exhaustion, due to campaigning with an insidious foe, or explained in any other way than as committed in cold blood. Two of the officers, by the way, who were accused at the same time with Major Glenn, Lieut. Conger and Surgeon Cook, have never been tried, despite the promise of the President that every incriminated officer should be put on trial.

---

The Baltimore *News* has been testing some of the valuable information sent to the press from the Bureau of Statistics at Washington. The particular line of investigation followed by the *News* relates to our trade with China, the remarkable growth of which is set forth in the statistics. Thus, it is shown that the imports into China from the United States, as computed by Chinese authorities themselves, have grown from 5,093,182 taels in 1895 to 23,529,606 taels in 1901, an increase of 350 per cent. in six years. According to the same authority, the increase of imports from Great Britain during the same time was only 25 per cent., and that of Russia only 60 per cent. This exhibit, showing the advantage of having a neighboring trading-station, was calculated to encourage everybody who had favored the taking of the Philippines for commercial rather than humanitarian purposes. But the editor of the *News* thought that it would be well to look a little farther into the subject, and, being of a suspicious nature, he inquired, first, why the year 1895 had been selected as a starter. The reason was, that the exports from the United States to China in that year were exceptionally small, being only $3,603,840. They were nearly twice as great in the following year, 1896, and three times as great in 1897, or $11,924,433. Of the great gain of 350 per cent. in trade with China since 1895, 230 per cent. had taken place before we had even dreamed of taking the Philippines. But by going back to the eighties other facts of considerable pertinence were discovered. In 1886 our exports to China were twice as great, and in 1891 two and a half times as great, as they were in 1895, the year selected as the datum line by the statistician at Washington. His suspicions being confirmed thus far, the editor took up the published statistics of our own Bureau, and there he found that in the four years from June 30, 1897, to June 30, 1901, our exports to China actually decreased from $12,000,000 to $10,500,000. This fact, if it has any bearing at all on the Philippines question, should teach us to rely more upon humanitarian than upon commercial results to justify us for what we have done, and to look to an approving conscience rather than to our pockets for our final reward.

---

Gov. Odell's voluntary statement that the Legislature will not be allowed any direct interference in the matter of the Pennsylvania tunnel franchise is of great interest for more reasons than one. It places him in the unusual position of speaking for that body—a place hitherto occupied by that peerless statesman, Mr. Thomas Collier Platt. That gentleman, by the way, recently declared that the Legislature *should* interfere, and punish the recalcitrant Aldermen by taking their power away or by abolishing them altogether. Apparently, therefore, the Legislature has two dictators. We say, apparently, for as a matter of fact Benjamin B. Odell is the real boss, and not the feeble, broken-down politician from Owego. If this is so evidently the case, what is the necessity for reëlecting Platt to the Senate simply in order that he may keep up the pretence that he and he alone still owns the Legislature?

---

The Schenectady militiaman who was expelled from the Painters' Union for serving with his company has secured an injunction from the Supreme Court at Albany, restraining the union from depriving him of his rights as a member. His suit carries also a collateral claim for wages during the time he has been

idle because of his expulsion, and for other damages. The suit, unfortunately, does not touch the main issue—whether a labor union may put itself in an attitude deliberately hostile to the power of the State to protect itself. The complaint appears to assume that a union may make its own rules. It could, for example, refuse to admit all men under or over a certain height, or put a clause in its constitution forever barring left-handed men, or members of the Seventh-day Baptist Church. All the injunction in the case of Militiaman Potter assumes is that a labor union is bound to administer its own rules fairly, and not to change them without due notice, and then only by regular process. It is held that Potter was expelled contrary to the constitution and laws of the union. The broad question of the legal responsibility of labor unions is hardly opened by this suit. The next step would be to test the complaint of a non-member who has made a contract in view of union rules. An award of damages to Potter would advance the day when labor organizations will be held to the responsibility that binds all other bodies doing a collective business.

---

The recent report on national finance presented to the Chamber of Commerce by Mr. J. Harsen Rhoades embraced three subjects of the highest importance. The first deals with the maintenance of parity of all kinds of money, and recommends that the Secretary of the Treasury be empowered to make gold and silver dollars interchangeable at the Treasury. The present law requires the Secretary to maintain parity, but does not indicate any method or provide any means of doing so. The recommendation of the Chamber of Commerce (which ratified the report) is that the simplest of all methods for maintaining parity be adopted—by giving the holders of silver dollars the option of exchanging them for gold ones if they desire. They have this option now as regards the subsidiary coins. The halves, quarters, and nickels thus hold a preferred place over the "standard silver dollar," so called because it is not a standard—*lucus a non lucendo*. This is one of the oddities of our patchwork monetary system. Congressman Hill of Connecticut has been working hard to have the solecism corrected. His original bill for that purpose is now a part of the Fowler bill. It would, no doubt, pass by a good majority if it were placed before the House distinct from other measures. Connected with this are two minor suggestions, which need not to be particularly discussed now—one calling for more subsidiary coins, and the other opposing any further coinage of silver dollars from the bullion in the Treasury.

---

Another feature of the report of prime importance is the recommendation that the Secretary be authorized to use his own discretion as to depositing the money of the general fund in banks, and that he be authorized to accept State and municipal bonds as security therefor. Mr. Jacob H. Schiff, one of the signers of the Committee's report, dissented briefly from this recommendation, not because he thought that the Government's money would be unsafe in such cases, but because the public deposits might be used to serve political ends. But this objection lies against the law as it now stands. The accusation of depositing money in favorite banks, and for party purposes, has been repeatedly brought against the head of the Treasury in times past. Secretaries Sherman, Folger, Fairchild, Windom, and Gage were thus accused by political opponents, and without any foundation for the charges. Our system being what it is, this evil, if it be an evil, will continue, whether the special security required for the deposits be one thing or another, and whether interest be paid by the banks or not. A change in the existing Sub-Treasury law seems to be impending, and it cannot come too soon.

---

Just as Vermont is leaving the prohibition ranks and New Hampshire seems likely to do the same, the great Canadian province of Ontario has passed what may be called a resolution in favor of the suppression of the saloon. The effect of Thursday's vote is moral only, for the referendum was held under conditions which made impossible a technical victory for the Prohibitionists. It was required that they should poll 212,700 votes for the measure—a majority of the votes actually cast in the general election of 1898. When it is remembered that the vote on any abstract measure is always far less than the vote for a man, it will be seen that for the Prohibitionists to vote at all was in the nature of a forlorn hope. Provided those opposed to prohibition, plus the stay-at-homes, were a majority of the vote of 1898, they might view with equanimity the largest plurality for prohibition. It is estimated that the Prohibitionists had a majority of 50,000 of the votes cast last week, but the polling was comparatively light, and the Prohibitionist vote fell short of the arbitrary figure set for it. Out of fifteen cities nine, including Toronto, voted for prohibition, so that it must be admitted that the anti-saloon people made a gallant fight. One cannot help seeing a certain Machiavellian cunning in Minister Ross's handling of the whole matter. He has ingeniously contrived that his province shall have the moral satisfaction of voting against the saloon, without the practical inconvenience of being deprived of it.

---

The passage of the Education bill in nearly its original form is a personal triumph for Mr. Balfour. The measure will be little modified in the Lords, and England will for the first time have a uniform system of primary education, and an organization which is empowered to deal with the pressing matter of public secondary education. The system, considered as a system, seems workable, and even the Liberals will feel that it is better than the former condition. That the Balfour scheme can last long in its present form we much doubt. There is a fundamental unfairness in the bargain by which the voluntary (chiefly Church of England) schools offer their buildings as an equivalent for support from the taxpayers, meanwhile retaining control of the schools. These buildings, though nominally private, are in large part already public property. The voluntary subscriptions by which they were built were in large part credited against the tax levy, and the Government, where it needed the school buildings, would be quite justified in expropriating them at a low valuation. As it is, the thousands of Church schools become public because the public pays for their maintenance, but remain private because the old managers retain a majority of the local committees, and the bill provides for respecting the sectarian "atmosphere" of each school. We doubt if the English people will long abide by so bad a bargain, and we confidently expect to see the people put in full control of the denominational schools. Meanwhile a rather bad educational measure stands as a monument to Mr. Balfour's parliamentary tact.

---

In rebuking German workingmen for voting as Social Democrats, Emperor William necessarily assumes to know better than they do where their true political interest lies. That, of course, does not embarrass him. He frankly takes all knowledge for his province. Yet even his easy air of infallible wisdom does not go well with the fact that the party which he denounces for its complete folly has a larger voting strength than any other political group in Germany. The steady rise of the Social Democratic vote, in the successive elections to the Reichstag, has been the most significant phenomenon in modern German politics. There can be little doubt that the party will show itself still stronger numerically at the election next June, despite the Emperor's protests. Indeed, the present drift of legislation in Germany, with the surrender of the Government to the Agrarians, is finely calculated to make Socialist votes. Nor should it be forgotten that German Socialism, politically considered, is by no means the wholly evil thing the Kaiser would have us believe it. Thousands of Germans are in the Social Democratic ranks simply because they think they can there more effectively register their dissent from sheer absolutism in government.

### *SPEAKER REED.*

It has long been and long will be impossible to refer to the late Mr. Reed without calling him the Speaker. As Seward was always Governor to Lincoln, so the masterful Speaker of 1889-'91 forever linked his name to the office. The fierce controversies which raged about his innovations on old practice have now abated, and we can calmly weigh his action with something of the serene impartiality of history. Looking back upon his break with the ancient law and tradition of the House, we do not see to-day, any more than we could see at the time, how it can be denied that his audacity was revolutionary. The particular vice of his attitude was that, in order to obtain authority regularly, he assumed it irregularly; in order to enable his party to make a new rule, he himself made it off-hand. In other words, he counted a quorum in order to make it lawful to count a quorum. That was essentially a revolution in parliamentary practice, and its subsequent legalization by Congress does not alter the character of Speaker Reed's original act.

Nor does the later record of Congress, under the "Reed rules," satisfactorily bear out the exaggerated claims made in his behalf. He himself, in characteristic but dangerously sarcastic phrase, thanked God that the House of Representatives had "ceased to be a deliberative assembly." What he meant was, that a weapon had been forged to force Congress to vastly greater expedition in a vastly greater amount of business. But an inspection of the *Congressional Record* will put a quietus on the pretension. As a matter of fact, the House sees as many bills sink into the grave as before, wastes as much time, and has as meagre a product to show for the labors of a session. We have always to bear in mind the simple truth that Congress is one of those bodies of which it can be said that, the more you change it, the more it remains the same thing. It is not in the rules of the House, but in its inherent nature, that the obstacles to rapid and inconsiderate legislation lie.

"You think," said Congressman Cannon once, in a burst of angry candor, "that because I am Chairman of the Committee on Appropriations, it is my business to make appropriations. But my duty really is to prevent them from being made." Somewhat the same may be said of the House as a whole. Perhaps its most important function is to put a hook in the nose of impetuous legislators. If every heady and hurrying Representative could drop a crude bill in the slot and draw out an enacted law, there would be an end of a stable social order. Congress has to deliberate in spite of itself. It has to compel individual or sectional interests to submit to the consensus of the whole country. That is a thing which could not be done by a Congressional machine turning out statutes as a press throws off printed sheets. Speaker Reed did not really create such a machine, despite the loud assertions of the time; and it is just as well that he did not. No doubt he facilitated the majority's having its way sharply and decisively when it knew what it really wanted; but in the matter of sheer "efficiency," judged by the amount of work done and the time consumed in doing it, he left the House very much where he found it.

It was, after all, the personal quality of the man, more than his actual public service, which gave him a place apart. He was that rare phenomenon among ambitious politicians in a democracy—a man with positive convictions and a tongue that spared neither friend nor foe. He seemed, in his reckless use of biting speech, to have taken to heart the advice which Talleyrand gave to Thiers: "You wish to rise; make enemies." It was partly, no doubt, the temptation of his own incisive wit. He could puncture absurdity and inflated humbug as quickly as he perceived them, and he never found it in his heart to refrain. Almost at the very beginning of his Congressional career, he mortally offended some of his constituents, who had applied to him to secure them some condemned cannon, by endorsing on their letter of application, "I am not in the old junk business." He could not stay his hand, on such fit occasion. From that moment until the day when, scorning to "flatter crime where it sits throned in brief omnipotence," he levelled his sarcasms at a flaunting Imperialism, he was typically the American in public life who had a mind of his own and spoke it pungently.

The political success which Mr. Reed won is really the best proof of an unusual ability, beyond that of a mere master of flouts and gibes. A democracy does not readily warm to a public man who ridicules its follies. One whose words "crystallize into epigrams as they touch the air," must be able to convince men that he has weight as well as wit if he rises by the suffrages of a people who so like to be flattered, and whom it is so easy to flatter—as easy as lying. Seldom does a politician with a cynic turn, like Mr. Reed, go far; and he has a title to distinction in the fact that his supporters saw more in him than the sharp tongue which made them wince even while they voted for him. Almost equally remarkable is it for a public man to retire voluntarily, as he did, without moroseness or bitterness. He never concealed his opinion of President McKinley or of the methods by which the nomination of that gentleman was secured in 1896; yet it was not with the sourness of a disappointed man, but with the proud sense of an intellect and character superior to base time-serving, that he spoke of the men who had risen to power through sedulously consulting the tastes of the "strong beast" under which Plato figured the populace, and declaring that whatever it wanted was the deepest wisdom and the highest morality. Some one asked Mr. Reed not long ago if he had not greatly missed the fascinations of public life. He replied frankly that he had feared he should do so, and did not know but he might yet come to do so, but that thus far "the Lord had been good" to him, and had preserved him from that misfortune. Such a cheerful temper, in retirement from great power, is as infrequent as it is admirable.

There was undoubtedly in the man a strain of shrewd and sturdy Americanism, of the old-fashioned sort. This it was which made it impossible to trick him with the glamour of our latter-day Imperialism. He was too solidly based to be swept away by the rush of new-fangled doctrines which came with the Spanish war. He laughed at them; he parodied them; he poured out his irony upon them; he turned them to ridicule, and transfixed their champions with the darts of his sarcasm; but deep down in his heart he was filled with a sincere and patriotic grief that his countrymen should seem for a time to be running after those tawdry glories. A sinewy Yankee, smacking of the soil, he took his place beside that other racy product of our native earth, Mark Twain, in employing the arsenal of his wit against the false and fleeting impulses of the hour which would introduce the new Empire into old Americanism. It is his unyielding opposition to that folly, and the calm confidence with which he looked to see it fall in ruin, that made his later years the most truly serviceable of all his life, and that deepen the regret we feel that such a man—so ill spared—should have been taken away before filling the measure of his days.

### *THE TREASURY REPORT.*

The first leading feature of the annual report of the Secretary of the Treasury is the one relating to income and expenditure. The receipts for the fiscal year ended June 30, 1902, were $684,326,280, and the expenditures $593,038,904, leaving a surplus of $91,287,376. The receipts from internal revenue for the year were $271,880,000. The repeal of war taxes did not take effect until the end of the fiscal year. For the next fiscal year the estimates from internal revenue are $222,000,000, and the estimated surplus from all sources is $48,000,000. This depends, however, upon the continuance of good times. If there should be a commercial reaction, the balance might be on the other side of the ledger. The expenditures do not include anything for the sinking fund. Under existing laws it is presumed that all, or most, of the surplus will be applied to

the purchase and cancellation of United States bonds. Purchases for the last fiscal year reached the large sum of $70,410,000, with which $56,071,000 of bonds at par value were bought, the remainder being paid for premiums.

This large slice taken out of the public debt lessens the aggregate security available for the national banknote system, and brings us nearer to the time when other means must be found for keeping any kind of paper currency going other than Government issues. Secretary Shaw anticipates the approaching dilemma by suggestions concerning the issue of banknotes based upon the general assets of the banks. This is much the most important part of the report and has evidently been the subject of Cabinet consideration, since it is directly in line with the President's message. The latter referred to "the recurrence of financial stringencies which injuriously affect legitimate business," and dwelt upon the need of an element of elasticity in our monetary system. The Secretary holds the same views and goes more into detail. He thinks that the time has already arrived when it will be necessary to adopt one of two policies. "Either the Government debt must be perpetuated as a basis for national-bank circulation, and additional bonds issued as occasion may require, or some other system must be provided."

Some discretion is given to the Secretary to extend a portion of the existing debt by converting short-time bonds into others running thirty years at 2 per cent., and thus putting off the day when the Government must adopt some other system; but he has no discretion to put out additional bonds. Therefore, the currency must remain inelastic, even if it does not shrink by reason of the rising market price of the bonds, which makes it more profitable for the banks to sell these securities than to hold them for the small profit that can be derived from note issues. Not only is no substantial relief to be obtained by extending the short-time bonds, but such extension disables the Government from using its surplus to pay off at par the bonds maturing within a brief period. In short, there is no use in further delaying the consideration of means for issuing a circulation based upon the general credits of the banks.

The Secretary thinks that a very small tax upon circulation to provide a common redemption fund for the notes of failed banks would suffice, and he does not favor the policy of making notes a first lien on the assets. Probably a little further reflection will lead him to change his mind in this particular, seeing that our present system not only gives the note-holders a first lien on assets, but gives also the Government's guarantee that this first lien shall be sufficient for the purpose of redemption of the notes on demand. Both the Scotch and the Canadian systems give note-holders the first lien, and it is a fact to be remembered also that our own banking systems before the civil war were all tending toward the same conclusion.

An analysis of bank failures under the national system shows that a tax of one-eighth of 1 per cent. would have covered all loss to noteholders, even if there had been no bond security for note issues. This tax, the Secretary thinks, should be considered a "premium of insurance" and the Government the "underwriter." This is a very weighty suggestion, since it implies that the Government is to guarantee the goodness of the notes, as it can well afford to do, since it has the power to impose the tax or fix the premium of insurance. All opposition to assets currency ought to cease when the Government guarantees its goodness.

There is no recommendation for branch banks. One thing at a time is a good rule. The principal mistake of the Fowler bill lies in the attempt to do too many things at once, thus combining in the common opposition everybody who objects to any single feature of it. The Secretary has no doubt taken a lesson from the failure of that measure to command the assent of the Republican caucus at the last session. By putting himself in line with the best thought of the day in the matter of banking reform, the Secretary has rendered a good service to the country, and one which may not improbably bear fruit in practical legislation during his term of office.

The Secretary makes another excellent recommendation—that he be allowed to deposit the Treasury surplus in banks without specific security, and that the Government receive interest therefor, such deposits to be made after special examination of the banks so chosen. He would abolish the useless distinction which the law makes between receipts from customs and other receipts, so that the deposits may be made direct from the Treasury instead of from the internal-revenue offices. When we consider the trouble that has beset successive Secretaries in their attempts to avoid a disastrous accumulation of idle funds in the Treasury, and the public agitation thereon, we can only wonder that Congress has permitted the present senseless and antiquated system to continue so long. A bill of ten lines on the plan suggested by the Secretary would cure this evil completely, and with entire safety to the Government, besides realizing a considerable income from interest on deposits. It would also give the Secretary more discretion than he now enjoys as to the payment of premium on bonds purchased. He would not be forced to buy bonds to reduce the surplus. He would be free to take them or not, according to the price asked.

### *VENEZUELA THEN AND NOW.*

The astonishment of a traveller from Venezuela who had been in this country in 1895, and should return here to-day, would surely rival that of any assumed visitant from Mars. His melancholy might equal even that of Macaulay's naked New Zealander sitting on the ruins of London Bridge. For what an amazing transformation would not our Venezuelan have to note! Seven years ago he and his fellow-countrymen and his native land were as the apple of our eye. On their behalf we were ready to go to war with the greatest naval power on earth. To prevent our "sister republic" from having an inch of territory taken from her, we were as ready as Hotspur to shed our dear blood drop by drop. There was, in fact, a most effusive, not to say maudlin, swearing of eternal Pan-American friendship, and let the rest of the world come on if it dared!

But now, to Venezuelan eyes, we must seem to have suffered a sea-change. It is a question to-day, not of a dispute over a boundary line in the swamps and tangled forests of a semi-tropical country, but of very hard cash demanded at the cannon's mouth. Great Britain never proposed to delimit her claimed Venezuelan territory by force; but her war-ships are now insulting American waters by their presence, and, side by side with German cruisers, are preparing to move upon unhappy Venezuela just as if she were Abyssinia or Persia, with no big brother to protect her. "Where," the Venezuelan traveller might well ask, "is the noble ardor of 1895? Where is America for the Americans? Where the immortal Monroe?" Where, indeed! The Venezuelans are treated by the American press and public to-day as if they were nothing but a nuisance. "Good enough for the miserable Dagoes," is the common remark about the news that Germany and England are to seize Venezuelan ports and collect a long-overdue debt. To leave out no drop of bitterness from the cup pressed to the lips of the Venezuelan traveller, he would have to read solemn and very dull newspaper editorials, telling him that he never did understand the Monroe Doctrine anyway.

The thing which Americans ought to bend their minds to understand, however, is that the temper in which such affairs are handled makes all the difference in the world. We are convinced that it would have been just as easy to set the country aflame against Germany this year over Venezuelan wrongs as it was against England in 1895. The madness of that time was wholly without good reason. A distinguished American, long resident in England, then wrote from London to a friend in this country, "We can see that you are very angry, but we haven't the faintest idea what about." The only explanation was

that the Administration managed to give the impression that England was contemplating a great outrage, and the people were ready to fly to arms without stopping to ask what it was all about. A similar belligerent note from Washington to-day against Germany would undoubtedly lead to a similar result. It would be easy to make out a plausible case. "The scheming foreigners *say* that they only want to collect money justly due them, but how do we know that the debt is a just one? Is it not an example of the land going with the money? How do we know that, once in possession of the sacred soil of republican America, these monarchists will ever give it up? We must resist the very beginnings of aggression. The Monroe Doctrine is in peril, and we must awake, arise, or be for ever fallen!"

But President Roosevelt has met the situation with such calm good sense that the country is as quiet and indifferent as it would have been in 1895 had a similar course been followed then. The correct attitude was indicated unmistakably in the President's latest message. "No independent nation in America need have the slightest fear of aggression from the United States." So much for that side; then for the other—"It behooves each one to maintain order within its own borders, and to *discharge its just obligations to foreigners*." That tells the whole story. The language used is perhaps a little harsh; it will no doubt grate on some South American ears; it is in a tone which we should never think of using towards Italy, for example, or of tolerating for an instant if used by Italy towards us. But it states the true position accurately. No stretch of the Monroe Doctrine or of American big-brotherhood will enable the South Americans to assume the part of spoiled children. If they are naughty they will be whipped and sent off to bed. If they play fast and loose with their international obligations, they will have to take the consequences. No ægis of Monroeism will be held over them. We shall neither pay nor guarantee their debts nor prevent their creditors from forcing them to settle. They are always welcome to our good offices, but just at present our good offices consist in telling them bluntly to be decent and meet their obligations to foreigners. It is a great point gained. The firm and sound position taken by President Roosevelt in all this business contributes not only to the peace of the world, but to our public peace of mind. We shall not begin to see horrid visions and to talk of war every time a South American country takes to playing its tricks, and shall look upon the sailing of a foreign warship to enforce justice in South America as calmly as we should upon a deputy sheriff going out to make a levy.

## *OUR SULU TREATY.*

The announcement in the fall of 1899 that Gen. J. C. Bates had negotiated a treaty with the Sultan of Sulu which forever bound him to our service as a loyal vassal, at a cost of only $760 monthly in "salaries," was received with joy by the Imperialists and by the McKinley Administration. It was possible, its organs said, that we had made a mistake in not working through or buying up Aguinaldo, but that was then a dead issue. In this Sulu matter we had taken a leaf out of England's book and had improved upon it. It established, as every one could tell at a glance, a political order similar to that among the minor principalities in India and in the Malay states. It was bound to work well, for the *Tribune* described it as the "happiest omen" for the future good government of the Philippines, and regretted that similar arrangements could not be made with all the other "grand divisions" of the archipelago. With that wise foresight which ever distinguished him, Gen. Otis saw in this treaty a "happy adjustment of all apprehended pending difficulties." A serious observer in Manila even wrote that "the foundation which has been so admirably laid by Gen. Bates may well stand for years as the basis of the work of the others who may come after him."

Of course, there was a fly in the pot of ointment. The pesky Anti-Imperialists could not refrain from pointing out that this treaty was practically dictated by the Sultan of Sulu. Gen. Otis had no troops to spare from Luzon at that time, so the Sultan decided that our tribute to his majesty should be $760, and not $599.99, or $699.99, or any other bargain-counter figure. Then the Anti-Imperialists insisted that the "party of moral ideas," which had once freed a race at home, stultified itself by becoming a party to the slavery practised in the Sultanate. Assistant Secretary of State Hill at once came to the Administration's defence and "indignantly denied" these aspersions. We were no more responsible for the customs of the Moros, he explained, than we were for the scalping propensities of the Sioux. The fact that the Sultan acknowledged our sovereignty had nothing to do with the matter. The Constitutional provision forbidding slavery under the United States brought up a nice point in Constitutional law, "about which there will be wide difference of opinion." But, any way, he said, in dealing with such questions we must use "practical means," and, as Mr. Roosevelt had even then taught us, we must all bow low before the god Practicality. In any case, Mr. Hill said, "the spirit and genius of our American institutions" would not long permit slavery and polygamy to continue under our flag. But the *Tribune* scorned such a qualified defence. "To not one of the conditions is exception to be taken on any ground of equity or reason" was its whole-souled declaration.

Well, three years of the Empire have passed since then and the "foundations so admirably laid by Gen. Bates" have begun to tremble and shake. The Sultan is content, for when he failed to get his money the other day he telegraphed to Manila and "ordered it hurried along." The Philippine Commission "immediately held a meeting" (according to the *Sun's* dispatches), and appropriated the money out of the Philippine revenues. Naturally, the good Sultan is pleased at this prompt recognition of his powers. Not so Gen. Davis, the new commanding general in the Philippines, one of the "others" who have "come after" Bates and Otis. Gen. Davis demands "that the Bates agreement be abrogated and set aside; that no sultan or king over all the Moros of any region or over other dattos be recognized"; and—wicked as it may seem when viewed in the light of 1899—insists that "no pension or subsidy be allowed to any sultan or heir apparent, or to any other chief, and that government over the Moros be military." There, be it observed, speaks the true soldier. No diplomacy or filthy lucre for him. He knows his policy means war, for he calls upon Congress to act, because "the Moros surely will never willingly give up the rights they now enjoy."

But what of that? There has been comparatively little American blood spilled of late. "When these born pirates," Gen. Davis says, "feel the weight of our power, they will believe we are in earnest and respect us, but until then they will despise and hate us." So he would have our new policy of blood and iron "announced at once and enforced at every cost." But this bull in the china shop is not willing to stop there, for he continues to demolish the arguments of 1899 in the following plain and satisfactory way:

> "If we pursued the English or Netherland plan, governing native races through native kings, sultans, rajahs, and dattos, then this sultan would fit into the scheme, but it seems to the writer quite out of the question for us to quote to the Moros the Declaration of Independence, and particularly the clause which asserts that all men were born free and equal, and at the same time concede to certain persons living under our flag the inherited legal right to tax, enslave, and even behead their fellowmen."

What in the world are Secretary Root and President Roosevelt about, to allow a general to "let daylight" into their policy in this way?

As for ourselves, we think Gen. Davis entitled to a vote of thanks from every lover of his country for his plain speaking. The hypocrisy and hollowness of our attitude towards the Moros are now as evident as is our wrongdoing in Samoa since King Oscar's rigid investigation. But Gen. Davis has rendered a greater public service than that. He

has laid bare the exact nature of our rule by force—by rifle and cannon—in the archipelago. "I see in all this," writes an army officer of rank now in Manila, referring to the general outlook in the islands, "the manifestation of the well-known inclination of humans to rule arbitrarily unless held in check by a determined public. Our very Presidents, our Secretaries of War, and our generals here and in Cuba have shown an ill-concealed desire to rule despotically, even when reared in a republic. And our army officers—well, you should hear some of their ideas as to how we should handle these people."

Gen. Davis has ventilated these ideas in advocating fire and slaughter among the Sulu Moros. Considering the news they are getting from Luzon of the cessation of agriculture, of the destruction of 90 per cent. of the field animals, of a debased currency, of pestilence, famine, and starvation—all as a result of our benevolent assimilation by force—no one can blame them if they should resist Gen. Davis to the last gasp, in case Congress approves of his un-Christian policy of conquest.

## *EDUCATIONAL DIVERSITY.*

At the last Oxford Convocation the traditional requirement of Greek at responsions (a qualifying examination which follows matriculation by only a few months) escaped repeal by a narrow majority. The Oxford discussion has found a wide echo in the press, and England is going over the pros and cons which with us, some twenty years ago, followed the publication of Mr. Charles Francis Adams's "A College Fetish." Curiously, the most valuable aid to an apparently lost cause has come from the ranks of the enemy. Sir Philip Magnus of the City and Guilds of London Institute (a technical and industrial institution) writes in the *Spectator* of November 22 a plea for the retention of Greek at Oxford, on the ground of maintaining a wholesome diversity in higher studies:

> "Education would lose in width and variety if all universities were to adopt the same conditions for the admission of students; and we may be certain that if Greek be no longer required as a necessary subject of examination in responsions at Oxford, the *language will gradually cease to be studied in nearly all schools*, and exact scholarship in this country will seriously suffer. It is because I desire to see our new universities *stamped each with its own individuality* that I should be sorry if the University of Oxford took any step that would dissociate it from its great traditions, and indirectly tend to introduce undesirable uniformity into the teaching of our secondary schools."

The educational drift to-day is unquestionably towards uniformity of institutions and diversity of studies within each institution. The elective and group systems which perhaps make for the individualizing of the student, as surely make for the reduction of institutions to a common category. It is no longer possible to say "alle we studie the same Latyne," but it is coming to be the case that all our students at about the same period make their choices from about the same list of subjects with numerical coefficients. The colleges, as far and as quickly as they may, are trying to turn out A. B.s "equally as good as" those of Harvard or Johns Hopkins. It is highly significant that no American university has asserted a distinct preeminence, or even a distinctive character, such as the traditional reputation of Oxford for classics, of Cambridge for mathematics. Why one goes, say, to Columbia rather than to Princeton, or to Harvard rather than to Yale, could hardly be expressed in terms of intelligent academic preference, and the small colleges retain their prestige on wholly valid but also completely unacademic grounds. Much of this uniformity is the inevitable result of simultaneous reforms in the colleges, much of it is wholesome and in the direction of thoroughness as against display. The remarkable thing is that institution after institution should be so willing to give up the tradition under which it has achieved a distinctive success, to assume that there is no dignity and scarcely safety except in following at a respectful interval the leading universities, finally to prefer frankly utilitarian ideals of education. We hear much talk of the peculiar advantages and special function of the small college, but where is this faith proved in works? Which are the small colleges that are not, as fast as their means permit, trying to become simply a large college in miniature? Few but the Roman Catholic colleges.

Now the value of the elective system may be regarded as settled, and the fact that Greek is only most desirable, not indispensable, in a liberal curriculum may also be considered as proved. What is not proved is that all the colleges should, therefore, renounce Greek, or put it in the category of elementary histology, contemporary fiction, and experimental psychology. The precept, "Hold fast that which is good," is by no means obsolete. The newest theories of education become fads unless the conservatives offer a sturdy opposition. Too ready and too universal assent seems likely to deprive higher education of any concurrent testing of various theories. Colleges, like men, are afraid of "getting left," and the result is that we have insufficient data to determine the value of any educational system. If only for the sake of experiment and the advance of educational science (if such a science there be), we need a few backward institutions—a few Oxfords to train our practical youth in impractical lore, and to show confidence in the generally disciplined as against the specifically trained spirit. This is why an officer of the newest kind of English technical school wishes Oxford to retain the traditional requirements that assure every graduate a certain acquaintance with the historians, poets, and dramatists of Hellas.

This discussion might have more than an abstract bearing. If a few of our American colleges would stand firm upon the traditional course in Greek, Latin, mathematics, and philosophy, teaching each student the elements of one natural science and of two at least of the modern languages; assuming that he who knew the Attic dramatists intimately would need no ambassador to Shakspere, Corneille, Molière, and Goethe, we believe that what might seem a wholly reactionary experiment would be fully justified by its practical results. Because it seems best for the average American student to browse at random through an elective schedule, it by no means follows that it is not good for *some* American students to follow an austerer way. And this is better done in a college where the *genius loci* is steadfastly favorable, than attempted amid the confusion of tongues of a modern university. The small colleges should look well to it before they sacrifice the strength of the traditional curriculum and engage in the hopeless competition with the "American-plan" menu now offered by the universities.

## ANDRÉ CHÉNIER.

PARIS, November 19, 1902.

M. Émile Faguet is a distinguished critic, whose feuilletons in the *Journal des Débats* are always read with much pleasure. The volumes he has published on French literature are very interesting, and it is almost a pity that he should take time every week for the analysis of plays which are almost always without merit. He has just added a volume to the series of "Les Grands Écrivains Français," and undertaken to inform us very thoroughly about the great poet André Chénier, one of the victims of the French Revolution.

André-Marie Chénier was born at Galata, a suburb of Constantinople, on October 30, 1762, in the house of his father, who was French Consul, Louis Chénier, agent of a commercial house at Marseilles. In Constantinople he was the "deputy" of his nation—that is to say, the representative of French commerce at the French Embassy. Louis Chénier married in 1755 Elisabeth Santi-Lomaca, belonging to a family which pretended to be allied to the hospodars of Wallachia and Moldavia. He was afterwards appointed Consul-General in Morocco. Madame Chénier remained in Paris for the education of her children. Her husband resigned in 1782, and returned to France. When the Revolution broke out the family was divided in sentiment. The ex-diplomat was very conservative; Madame Chénier, who was semi-literary and had associated with many writers and artists, was a "démagogue," to use her husband's expression, and imparted her principles to her son Marie-Joseph, whom she preferred to André, the future poet.

André had for his spiritual fathers Lebrun, the poet; David, the painter; and

Brunck, an archæologist. "The first objects set before his eyes," says M. Faguet, "were antique medals, engravings, and scenes from the Iliad." The first serious conversations which he heard were intermixed with verses, with tales of travel, citations from Winckelmann, from the Greek Anthology. In 1773 the boy was placed in the Collège de Navarre with his brother Marie-Joseph. He there excelled in his studies, and became acquainted with the brothers De Pange and the brothers Trudaine, whose names often appear in his writings. In 1782 he was attached, as gentleman-cadet, to the Angoumois regiment, which had Strasbourg for its garrison. His rank was intermediate between the officers and the non-commissioned officers. The life in the regiment did not suit him; his health was delicate. He returned to Paris after a short time, and gave himself entirely up to letters and to society. He was not handsome; we have a portrait of him, painted by Suvée in the prison of Saint-Lazare, on the 29th Messidor, An II.; it shows him with a very large head and forehead, out of proportion to his body; already bald, with flowing hair, wide eyes, a very sinuous mouth. The expression of the face is refined and agreeable. He read immensely and made comments on his readings; these notes will probably soon be published in their entirety. He made himself familiar with all the Greek and Latin authors. He was very eclectic, and did not neglect English and Italian literature. M. Faguet tells us that he became an enemy of the Christian doctrine. "As to this idea that Christian morality is not superior to that of the ancients, he is very explicit. Against the authenticity of the history of Jesus, against the resurrection of Christ, he has vigorous and passionate pages. He is an anti-Christian radical." But we must not infer from this that he was a friend or admirer of the philosophers of the eighteenth century. He had great contempt for Helvetius, a moderate admiration and no esteem for Voltaire (which showed a rare independence of mind at the time when Voltaire was the idol of society). The pages on Voltaire cited by M. Faguet are a very eloquent though sometimes very unjust satire.

The typical man of the eighteenth century, an infidel through ignorance, fashion, vanity, was not at all of Chénier's type. His portfolios, so long closed, and opened only lately, show him to have been a sort of moralist, like La Bruyère or Vauvenargues. He was observant, and traced good portraits in the manner of La Bruyère, without giving the names of his models. Before everything, he loved the Greek writers, and his poetical genius found its aliment in their writings. He was not a fervent admirer of our writers of the seventeenth century, but he knew them well, and he may be considered as the last of our classic poets. "He does not wish," says M. Faguet, "to be a Neo-antique; he means to be antique. He does not wish to be *racinisant*, nor *ronsardisant*." His genius was really original, and all independent minds are more or less isolated. His ambition was to give to France another Ronsard, better and more intimately aquainted with the ancients.

In 1782 he made a journey for his health to Switzerland and Italy, intending also to go to Greece; but he found himself too ill at Naples, and returned to France by short stages. He composed verses all the way, and compared himself on his return to Ulysses coming back to Ithaca. After this he was for several years to be inspired by the recollections of Italy and Sicily.

"This first manner of Chénier," says M. Faguet, "is exquisite, and has been universally regarded as the very characteristic of his genius, though we must take care not to confine it wholly within those two narrow limits. . . . The Ionian Sea and the light winds of Sicily sing in the verse of André Chénier as they do in those of Homer, Callimachus, and Theocritus." "He really sees like the ancients, not, as do most modern writers, with a mixture of abstract ideas interposed between the object and the writer; not, as do many others, through a light mist, very poetical also, but which makes the lines uncertain; but with the clearness, the precision of the lines of a bas-relief. For, as his master Winckelmann well said, if the modern genius is picturesque, the genius of the ancients is sculpturesque."

The model of this first manner of Chénier, its masterpiece, if I may say so, is in all French memories; there is not a schoolgirl, not a well-educated young man, who does not know by heart "La Jeune Tarentine," and does not sometimes recite it, I ought to say, sing it, as the verses are as melodious as the most melodious music.

"Elle a vécu, Myrto, la jeune Tarentine!
Un vaisseau la portait aux bords de Camarine."

This "Jeune Tarentine" will be forever found in French anthologies; it has an indescribable freshness, as well as pathos, that preserves all the purity, the nobility of the ancient pathos, which never was melodramatic, convulsive, and horrible.

Chénier became acquainted with the Countess Alfieri, who continued to be called the Countess of Albany, as she had long been known under that name before marrying the great Italian poet. His health had very much improved, and he led a worldly life, a life of gaiety, the kind of life which made Talleyrand say afterwards that those who had not lived in Paris from 1780 to 1789 did not know "la douceur de vivre." Chénier entered at that time, as a poet, upon what M. Faguet chooses to call his second manner. The "Élégies" differ from the antique poems; they are more Roman than Greek, and are sometimes Romantic. "They are complex at the same time and unique; they proceed from a lascivious ardor which reminds us of Catullus, to the deep and tender melancholy which reminds us of La Fontaine and announces Lamartine; they show us the eternal follies of the poet who laments, frets himself, despairs, who reconquers himself, abandons himself, or laughs at himself."

"Ah! que ceux qui, plaignant l'amoureuse souffrance,
N'ont connu qu'une oisive et morne indifférence,
En bonheur, en plaisir pensent m'avoir vaincu,
Ils n'ont fait qu'exister; l'amant seul a vécu."

These four verses are not a bad specimen of the spirit which is found in the "Élégies." The most characteristic and personal of these poems is an elegy which begins with the words: "Souvent le malheureux songe à quitter la vie," and which has become classic, like "La Jeune Tarentine."

Chénier was appointed Secretary of Embassy in 1787, attached to M. de la Luzerne. He left Paris with much regret, almost in despair; he consoled himself by studying English literature. He wrote a didactic poem, "L'Invention," which was a sort of preface to a philosophical poem, "Hermès," that much occupied his mind. We find him in Paris in 1790, and a member of the "Society of the Friends of the Constitution" with his friends Trudaine and De Pange. This society was formed by the most eminent men who were to make a mark in the Revolution. His first political work was an "Advice to the French People on its True Enemies," published in the *Journal of the Society of 1789*, on the 28th of August, 1790. It was a sort of manifesto of the Society, already alarmed by passing events. Speaking of the summary executions which were taking place in the streets of Paris, "Surely," says he ironically, "it cannot be denied that since all power emanates from the people, the power of hanging also belongs to it; but it is painful to think that it is the only one which the people's representatives don't wish to exercise themselves." Chénier's political programme will be found not only in this pamphlet, but also in the poem called "Le Jeu de Paume." Chénier published several other political poems—the "Hymn on the Triumphal Entry of the Revolted Swiss of the Châteauvieux Regiment" (April 15, 1793); an Ode to Charlotte Corday, in which he said:

"Ta douceur, ton langage et simple et magnanime,
Leur apprit qu'en effet, tout puissant qu'est le crime,
Qui renonce à la vie est plus puissant que lui."

He fiercely denounced the Jacobins, he protested against the excesses of the Revolution, he wrote four pamphlets in order to save the life of Louis XVI.

After the death of the King he ceased to write, and retired in despair to Versailles, and tried to console himself by writing fragments of his philosophical poem "Hermès," which was to remain unfinished. Chénier returned to Paris in the worst hour of the Terror. He thought himself safe in the house of his parents, but he was almost immediately arrested. He remained four months and thirteen days in the prison of Saint-Lazare, finding there some friends and making some acquaintances. Among these was one, Aimée de Coigny, whom he has made immortal by the beautiful and touching poem "La Jeune Captive." He wrote in prison some "Iambes," in which his indignation found vent against the monsters in power:

"Souffre, o corps gros de haine, affamé de justice!
Toi, Vertu, pleurs si je meurs."

He appeared before the Revolutionary tribunal on the 7th Thermidor, and was on the same day executed in the Place de la Révolution. Nothing is known of his last moments. Forty-five hours afterwards Robespierre was hurled from power; and the reaction of Thermidor against the Terror began.

# Notes.

The New Amsterdam Co. will republish immediately Harmon's 'Journal of Voyages and Travels in the Interior of North America,' from the Andover edition of 1820. It will form part of their "Commonwealth Library" of tales of explorers.

*Poet-Lore* this month undergoes a transformation into the *American Quarterly*, which is to "stand for the literary movement of the present time in all countries, and for the social ideals and tendencies now

shaping progress in thought and life." It will add to *Poet-Lore's* scope "a department distinctly sociological," for which George Willis Cooke allies himself with Charlotte Porter and Helen A. Clarke. The place of publication is 16 Ashburton Place, Boston.

We continue our list of new editions for the gift season with mention first of 'Sir Walter Scott's Minstrelsy of the Scottish Border,' edited by T. F. Henderson, and published in four volumes by Blackwoods in London and Scribners in New York. Mr. Henderson's competence for the task of improving the latest revised issue of this monumental work (some seventy years since) will be felt by any one who reads his preface, in which he mingles praise of Professor Child and his great ballad collection with some criticism when discussing, as with Andrew Lang also, the origin of the ballad. So voluminous a work could not dispense with small type, but the impression is clear, on excellent paper, with broad margins. The binding is cheerful, and nothing is wanting to make these volumes a possession to be highly prized.

One must go almost as far back as to Mr. Henderson's predecessor for the first edition (1847) of Miss Pardoe's 'Louis the Fourteenth and the Court of France in the Seventeenth Century.' It comes to us now, as readable as ever, in three volumes, from James Pott & Co. The get-up is sufficiently attractive in all particulars. The endurance of this work is a tribute to the author's command of a style popular in the best sense and worthy of emulation.

The fresh appearance of the 'Ingoldsby Legends' (John Lane)—for the first we must revert to 1840—has for occasion the illustrations of Mr. Herbert Cole, whose face, we take it, in cap and bells, looks out at us from the headpiece to the list of his designs. They are spirited pen-and-ink sketches of considerable range and not infrequent decorative quality, and cooperate valiantly with the bright covers to make the volume attractive to all who plunge again or newly into the time-honored humor of the Legends.

The Dent-Macmillan reproduction of Thackeray's Prose Works, under Walter Jerrold's supervision, proceeds with 'The Virginians,' which require three of the modest olive-green volumes. Mr. Brock's illustrations, some in sanguine, are effective, and there is a photoprint after Marochetti's bust of the author in Westminster Abbey.

Companionable to the feel and not dissimilar in outward appearance, with flexible green leather covers, are Carlyle's 'Sartor Resartus: Heroes: Past and Present' (Scribners), and Tennyson's Poetical Works (Thomas Nelson & Sons), each again with its portrait, but Carlyle's early, after Lawrence's portrait, and the photograph of Tennyson in his latter days. The Carlyle is more condensed in the letter-press, and if the paper is thin in both cases it does not affect the legibility, and does make for the comfort of the hand in holding.

'The Social Comedy' (*Life* Publishing Company) is one more collection from that paper's inexhaustible store of social pictorial satire. Cynical much of it is; little of it that is not bright; occasionally a dash of coarseness. The average drawing is high, and as the majority of the designs are in wash, a more harmonious if a thinner quarto would have resulted from excluding most if not all of the pen sketches.

Volumes xix. and xx. of Prof. de Sumichrast's translation of Théophile Gautier (George D. Sproul), concluding 'Le Capitaine Fracasse,' and adding 'Tableaux de Siège,' show the same care as their predecessors in the collection. In the case of the latter we would recommend to our readers the introduction explaining the circumstances that called forth its striking pictures. Both volumes are, as before, pleasingly illustrated. The almost simultaneous publication of a new translation of Gautier's 'Voyage en Italie,' by Mr. D. B. Vermilye (Brentano's), affords the opportunity for an interesting comparison with one of Prof. de Sumichrast's earlier volumes. On the ground of literalness there is little to choose between these two versions; differences or omissions in either case may possibly be accounted for by referring to divergences in original editions; but Prof. de Sumichrast certainly shows, in a number of important passages, a much more idiomatic precision in regard to equivalences of diction and construction. His translation moves with easier and lighter speed.

Mr. Henry H. Bonnell's cumbrously titled 'Charlotte Brontë, George Eliot, Jane Austen: Studies in their Works' (Longmans) is a pedestrian but not uninforming work. There is nothing notably new between its covers; the style is uneven, and at best lacks distinction; the original criticism is disjointed, and quite devoid of the vital, discriminative insight which is the chief source of pleasure and profit in critical writing. Yet Mr. Bonnell has read widely and with enthusiastic sympathy. He has contrived to weave a web of quotations from the three woman novelists and their critics, held in form by a binding of personal comment, which is likely to prove instructive to readers who are beginning to take their fiction seriously. The author is disposed to think that the order of names on his title-page represents a descending order of merit. He makes the astonishing remark that his consideration of Jane Austen is "offered as a dessert after the more solid courses which have preceded."

'How to Attract the Birds,' by Neltje Blanchan (Doubleday, Page & Co.), contains much information about our common Eastern birds, and gives an interesting presentation of certain conclusions of investigators who are seeking the philosophy of some of the ordinary phenomena of bird life. It is in the main an excellent compilation and will be valuable to the general student, for it has freshness of treatment, yet is free from the burdensome details of first-hand knowledge. It would be pleasanter reading, however, if the author had coördinated her matter a little more carefully, leaving out the sub-headings that confront one at the beginning of paragraph groups. The first chapter tells how to invite birds to live near our homes by offering nesting sites, water, and attractive food-plants. Other chapters treat of nest-building, rearing the young, migration, the philosophy of coloration, and the value of the birds' work as destroyers of harmful plants and insects. There is also a good account of some naturalized foreign birds. The author has made careful use of the literature of her subject, especially of Mr. Thayer's articles on coloration, Mr. Olds's on bird songs, and the publications from the Department of Agriculture on economic ornithology. If Professor Cook's forthcoming work on migration had been available, the chapter on that subject might have been enriched.

One may not learn anatomy from text-books alone, but the printed and illustrated page retains for study what the scalpel reveals. The latest and perhaps the best of these aids is a 'Text-Book of Anatomy,' edited by D. J. Cunningham, F.R.S., and of many academic degrees (Macmillan). It is very copiously illustrated from original drawings, many colored, 824 in all. A large number of these represent soft tissues hardened by the formalin process, and are more accurate than those in the older style. The text rests on the doctrine that "a more or less close or remote blood-relationship links together all the members of the animal kingdom," and represents the very latest teaching in embryology and ontogeny, which lightens the dry details of anatomy proper.

The ninth volume of Cohen's 'System of Physiologic Therapeutics' (Philadelphia: Blakiston) is devoted to the therapeutic influences of heat, natural and artificial light, and water—or, more properly, waters—administered within and without, by Drs. Winternitz of Vienna and Kisch of Prague, with complementary chapters by competent Americans. It is eminently practical, is excellently written, and is a complete and trustworthy treatise. Dr. Eshner's translation is most acceptable, the American chapters are well written, and the whole book is heartily to be commended as readable and serviceable.

The twelfth annual issue of indispensable *Minerva* (Strassburg: Karl J. Trübner; New York: Lemcke & Buechner) is much enlarged, as one may see by comparing solely the table of contents for the United States as compared with last year's measure. Especially to be remarked are the exhibition of the Senate of the University of London, with the new affiliation of Westfield College; and the constitution of the new British Academy, with list of members. In the table of student statistics, the University of New York ranks nine in point of attendance, with 4,499, standing next after Moscow. The frontispiece is an etched portrait of Léopold Delisle, General Director of the National Library in Paris, whose half-century of service with that institution has just been celebrated.

The *National Geographic Magazine* for December opens with a study, by Prof. I. C. Russell, of the various observations of the volcanic eruptions on Martinique and St. Vincent. Among the topics treated are the number of active craters, the variation in the eruptions, their products, the causes of death and the downward volcanic blasts. Some idea of the enormity of the mass ejected may be obtained from the statement that "during each hour that Mont Pelée or La Soufrière was in full blast, something like 48,000,000,000 cubic feet of dust- and stone-laden steam were driven out." Prof. Russell's conclusion is that "perhaps the chief lesson taught by the recent volcanic eruptions in the Antilles is the meagreness of our knowledge concerning the interior of the earth"; and in order to make a substantial addition to this knowledge he advocates the maintenance at Washington of a magnetic and seismo-

graphic observatory. Dr. E. O. Hovey describes the eruptions of La Soufrière as observed by him in May. Mr. W. A. Miller tells how to obtain a copyright of a map or chart. To the note chronicling the recent placing of the remains of Columbus in the mausoleum in the cathedral at Seville should have been added, that there is almost conclusive evidence that the sarcophagus which the Spaniards carried to Havana from Santo Domingo in 1795, and from thence to Spain at the close of the late war, contained, not the remains of the great discoverer, but of his son Diego.

Calendars for 1903 are now almost at the flood. That denominated "The Child," in six sheets strung together, each with a color design of generous size (Philadelphia: Charles W. Beck, jr.), need not fear rivalry. It is hard to say whether Jessie Willcox Smith or Elizabeth Shippen Green, who collaborate artistically, bears away the palm; let the nursery decide. Miss Green furnishes the one humorous plate, assimilating a little tot to the toadstools about her. Miss Mildred Howells's "Whist Calendar," in twelve sheets (Boston: Noyes, Platt & Co.), is, for the text, a collection of rules and witty sayings about whist, in which Miss Howells finds the suggestion for a colored picture in the old style, as in the case of Talleyrand, Napoleon, Pickwick. This calendar will amuse and instruct. From E. P. Dutton & Co. we receive a "Book-Plate Zodiac Calendar," in black and white, designed by Elizabeth R. Finley, not very happily; "Three Little Girl Sketches," drawn on stone by Sewell Collins; and sundry English specimens in the well-known styles of the London house of Ernest Nister, such as the "Fra Angelico Calendar," illuminated after the master; the "Venetian Calendar," six colored scenes; the little "Dutch Tile Calendar," very dainty in blue; "Wise Saws," also for children (proverbs illustrated); "Roses," "Gems of the Season" (floral), "Sweet Memories" (for lovers), these of large size, and finally the Madonna della Sedia, flanked by Fra Angelico's angels, with the calendar proper suspended by ribbon. These make a good average of excellence.

In connection with the foregoing we may fitly mention the volume of nearly 450 pages entitled 'Every Day in the Year: A Poetical Epitome of the World's History,' edited by James L. and Mary K. Ford (Dodd, Mead & Co.)—not a mere anthology, we are warned in the preface. To sample at random, we select January 21 (Thackeray's "Execution of Louis XVI."), noting by the way an error of "January 2" for "21" in the event item; January 22 (Theodosia Garrison's "God Save the King," on Edward VII.'s accession; Edward Lear's and George T. Lanigan's humorous "Akond of Swat"; Ben Jonson's "On Lord Bacon's Birthday"; and Byron's "On My Thirty-seventh Birthday"). February 22 gives us two poems on Washington's birthday, and one on Bill Nye's. So we might proceed to demonstrate the queer juxtapositions. The collection, in spite of this and of some padding with trivial events and verse, will have its use and its admirers. There is an index of first lines, another of titles, and a third of poets; we miss one of the persons celebrated.

—Francis H. Nichols, the author of 'Through Hidden Shensi,' contributes to the December *Atlantic* a strong paper on the Chinese dislike of Christianity. This is not, he shows, merely one phase of a national repugnance towards foreign religion as foreign. Buddhism and, later, Mohammedanism made their way to widespread favor in China, though both of foreign origin. The real reason for the discrimination lies in the failure of the advocates of Christianity to understand and appreciate the Chinese point of view. The missionary wrongly condemns Chinese life *in toto* as heathenish and bad, and practically demands the denationalization of the Chinaman as a condition of his acceptance in the Christian fold. Mr. Nichols criticises merely the mistakes of method, not the fundamental aim of the missionaries, and holds that the great need of China to-day is the general acceptance of Christianity. "Less talk about a missionary spirit and more of the spirit of Christ in mission work" is the best ground of hope for such a result. Ambrose P. Winston writes of the Trade Union and the Superior Workman, combating without entire success the idea that unionism harms the cause of labor by its efforts to limit the amount of work done by the individual laborer, and to prevent any system of pay by which the superior workman may increase his earnings through his superiority. George Chamberlain describes present conditions in Brazil, calling particular attention to the feeling against the United States aroused by the Spanish-American war and our insignificant share in Brazilian trade. Woodrow Wilson's address on the "Ideals of America," delivered on the one hundred and twenty-fifth anniversary of the battle of Trenton, is published in full.

—The appearance of Lowell's anti-slavery papers calls forth from a writer in the *Atlantic* some remarks on Lowell as a man of temperament. While due credit is given for a great variety of separate literary virtues, such as fervor, vivacity, gaiety, flash of epigram, opulence of interests and sympathies, range of illustration, abundance of allusion, and fecundity of ideas, the quality of moral unity in his nature is specifically denied. Such a denial can hardly be maintained on a comprehensive view of the man and his work. It may be admitted that his writing does not show "the weighty advance of massed forces, the surging movement that seems inevitable, the flow, unstudied and irresistible, of great prose, such as Raleigh's and Bunyan's, or Milton's and Burke's, at their height"; but credit for moral unity of nature can scarcely be withheld on the ground of failure to rise to the grand movement of a Burke or a Milton. The real test for moral unity is not in the choice of the light or the heavy missile, but in the constancy of aim; and, judged by an intelligent application of this test, Lowell will hardly be found wanting. Epigrams are no doubt a dangerous temptation to irrelevancy, self-contradiction, mere smartness, and many other evils, but Quintilian tells us that they are useful "dum rem contineant"; and it is not often that the flashes from Lowell's pen fail to throw light upon the point at issue. Formal philosophical reasoning was not in his line, but a study of his life-work, literary and otherwise, shows that it was grounded upon definitely conceived principles. The ups and downs were but ripples upon the surface; the stream went steadily on in its appointed way, and the careful eye need never be at a loss to determine its direction.

—One of the most stately publications of the present season is the seven-volume 'Variorum and Definitive Edition of the Poetical and Prose Writings of Edward FitzGerald, including a Complete Bibliography and interesting Personal and Literary Notes: the whole collected and arranged by George Bentham, with a Preface by Edmund Gosse' (Doubleday, Page & Co.). Only the first three volumes have come to hand; and while they do not wholly disclose the richness of the contents, they sufficiently illustrate the method of this compilation. From the "prose writings," it must be said at once, the Letters, which far outweigh in value all FitzGerald's other prose, are excluded, save that permission has been obtained to make extracts from them bearing upon the successive works here reproduced edition after edition. In place of the scholarly mode of variorum exhibition in parallel columns, we have here in volume i., for example, the 'Rubáiyát' of Omar Khayyám, first edition; in volume ii., the same, second edition; in volume iii., the same, fourth edition, and fifth edition (so nearly identical with the third that the latter is not reproduced textually). *Pari passu* with the Quatrains we have the several issues of 'Saláman and Absál,' of 'Euphranor' and 'Agamemnon.' The Spanish transfusions will fill the next two volumes, with 'Polonius' thrown in; the sixth comprises 'Sea Words and Phrases along the Suffolk Coast,' 'The Bird-Parliament,' and the 'Oedipus,' while the seventh is filled with a miscellany embracing a translation from Petrarch, the introduction to 'Readings in Crabbe,' the Memoir of Bernard Barton, etc. The original title-pages are given in facsimile. The variorum and bibliographical notes are accommodated at the foot of the page. The original pagination is indicated in the margin. In short, with a few accessories, what is aimed at here is to endow the purchaser of the set with FitzGerald's publications in their several stages. The sumptuousness of the form, however, adds something to the manual labor of comparison, which must still be (for contents of the first three) volume by volume.

—Little remains to be said except in praise of the typography, presswork, and handmade paper, which have the clear and generous quality of the De Vinne Press, beginning with the well-designed, rubricated title-page. Flaws like the inconsistency of accents on pp. xvii., xviii. of volume i. (Attar, Attár) are rare; but in our copy of volume iii. there is an unaccountable mixture after page 108. This page is followed by two leaves containing prefatory extracts relating to 'Euphranor' (folio xi., though how related to any previous Roman enumeration is not perceptible), breaking off unfinished and not continued on the verso, which duplicates page 102 of the preceding 'Saláman'; the third page likewise duplicates page 103; the fourth page of this insert is blank. Mr. Gosse's brief introduction exemplifies the difficulty of saying anything new about FitzGerald, and, in fact, the only novelty we have observed in it is the sample of the Latin translation in which FitzGerald first showed the influence of Omar; but this cannot be novel to the wor-

shippers of Old Fitz. They will need no further account of this edition, *simplex munditiis*, to be moved to procure it straightway. They may re-read, with what reflections seem pertinent, the author's modest words to Cowell nearly half a century ago: "I hardly know why I print any of these things, which nobody buys; and I scarce now see the few I give them to. But when one has done one's best, and is sure that best is better than so many will take pains to do, though far from the best that *might* be done, one likes to make an end of the matter by Print."

—Mr. Gustav Kruell's Beethoven might have seemed to any engraver an accounting in full for a year's labor; but this artist's facility is bounded only by his interest in his theme, and he has followed directly on the heels of that masterpiece with another, a head of Jefferson. This is the third of our Presidents (reckoning already Lincoln, in two phases, and Grant) whom Mr. Kruell has celebrated in his grand manner, and, as usual, a comparison of the technique of these classical examples, from one hand, of the highest attainment in wood-engraving offers a most interesting study. A growth in free handling is manifest, but always the treatment is subdued to the character illustrated. The basis of the present work is Gilbert Stuart's portrait of Jefferson in the possession of Bowdoin College, but with the customary divination which our engraver has the secret of applying to his models. In color and in brushlike quality this plate belongs with his later productions, and for the first time he has introduced an accessory, in the shape of a column in the background, which both balances the composition and connotes the statesman. The print, on Japan paper, is to be seen at Wunderlich's, in this city, and may be had of Mr. Kruell, at No. 331 Main Street, East Orange, N. J.

## POLLARD'S HENRY THE EIGHTH.

*Henry VIII.* By A. F. Pollard, M.A. London: Goupil & Co.; New York: Charles Scribner's Sons. 1902.

"Fine feathers make fine birds," but Mr. Pollard's 'Henry VIII' has other titles to favor besides the brilliancy of its plumage. Like the previous volumes of this series which the Messrs. Goupil are devoting to the sovereigns of England, it is magnificently printed, and abounds with well-executed photogravures of quarto size. At the same time it is the work of a sound historian and an accomplished essayist. Although Mr. Pollard has for his predecessors Mr. Andrew Lang, the late S. R. Gardiner, and Dr. Osmund Airy, he is by no means eclipsed. He gives us history and not letterpress, a striking portrait and not a miscellany of facts.

Before coming to the text, we shall say a word or two about the illustrations. What Vandyck was to the court of Charles I., that, and in our opinion more, Holbein was to the court of Henry VIII. There is therefore no dearth of subjects, and the galleries of England have been thrown open freely to Mr. Pollard. Out of forty-four illustrations, eleven are reproduced through permission of the King, while the treasures of ducal collections are disclosed with equal liberality. Every one who has had the good fortune to go through the private apartments at Windsor will remember how rich they are in the best examples of Holbein's brush and pencil. From such sources as this and the Duke of Norfolk's gallery, Mr. Pollard has been able to draw, apparently at will. Indeed, the wealth of artistic material which England affords has placed a certain restriction upon his choice of subjects. The Leo X. of Raphael, the Charles V. of Titian, the Erasmus of Holbein himself, are excluded from a work into which they might easily have been brought but for excess of riches. In their place we get such native types as Henry, Sir Thomas More, Thomas Cromwell, Thomas Howard, and the young Edward VI., all by Holbein; and where recourse is had to the Continent, it is simply for the sake of depicting some one, like Cristina of Denmark, who might have become an English Queen, and of whom there is also a very fine portrait. We do not see how Mr. Pollard's selections could be improved; nevertheless, one cause of regret suggests itself. Holbein did not paint all the people who must be represented in an illustrated life of Henry VIII., and some of those whom he did paint best, fall below the due standard of historical importance. For this reason we get a bevy of Queens by inferior artists, and are not led to realize how many of Holbein's masterpieces were done in England.

A new life of Henry VIII. at once recalls Froude's 'History,' Brewer's prefaces to the first four volumes of the 'Letters and Papers of the Reign of Henry VIII.,' and Mr. James Gairdner's article in the 'Dictionary of National Biography.' In point of opportunity, Mr. Pollard has the advantage of all these predecessors. Not only does he stand upon their shoulders, but the scope and design of his book favor a more direct appeal to the average reader. Froude's glorification of Henry is simply one ingredient, however important, in a long and anti-sacerdotal history. Brewer's prefaces are attached to a series of original documents which none but professional students open. Mr. Gairdner's admirable and learned sketch is conformed to the strict requirements of a biographical encyclopædia which embraces seventy-three volumes. On the other hand, Mr. Pollard writes for an audience that is well educated but does not care to wade through an ocean of technical details. To have explored the latest sources is with him a preliminary and not a final step. His proper function he finds in the delineation of character and in the statement of broad results. Unlike Froude, he does not thrive on paradox; unlike Brewer and Gairdner, he is not handicapped by erudition. He has a fine theme, and he knows how to treat it within reasonable compass.

Most of us have been led by our constitutional studies to look upon Edward the First as the greatest of English kings, but Mr. Pollard does not hesitate to style Henry VIII. "the most remarkable man who ever sat on the English throne." It may be urged with some force that "remarkable" is a vague and colorless word which commits the writer to no verdict regarding virtue or capacity. However this may be, the careful reader will soon perceive that Mr. Pollard feels deep admiration for Henry's power and strength of purpose. He is not a worshipper of brute force, nor does he seek to ferret out extenuating circumstances whenever a queen, a cardinal, or a minister is sent to the block. He leaves Henry a supreme but astute egotist, whose vigorous despotism carried England through the crisis of the Reformation with much success. And furthermore he makes the English nation the ready accomplice, not the passive victim, of its king.

To explain the cheerfulness with which the masses followed in the steps of their sovereign, even though the path led them to the foot of many a scaffold, Mr. Pollard adduces several reasons. In the first place, it was well recognized that Henry's life was the only safeguard against civil war. The crude alternative of despotism or anarchy was presented to a generation that had not yet forgotten the Wars of the Roses. The King's legitimate offspring, and they alone, could wear the crown of England without involving the realm in another series of bloody campaigns and ruthless proscriptions. Hence arose the national anxiety over the question of royal wedlock. Secondly, Henry was a ruler of magnificent strength and presence, proficient in all sports and manly exercises. Here Mr. Pollard can use an illustration which is so modern and so apropos that it almost sounds like an *argumentum ad hominem:*

"In archery, in wrestling, in joust, and in tourney, as well as in the tennis court or on the hunting-field, Henry was a match for the best in his kingdom. None could draw a bow, tame a steed, or shiver a lance more deftly than he, and his single-handed tournaments on horse and foot with his brother-in-law, the Duke of Suffolk, are likened by one who watched them to the combats of Achilles and Hector. These are no mere trifles below the dignity of history: they help to explain the extraordinary hold Henry obtained over popular imagination. Suppose there ascended the throne to-day a young prince, the hero of the athletic world, the finest oar, the best bat, the crack marksman of his day, it is easy to imagine the enthusiastic support he would receive from thousands of his people who care much for sport and nothing at all for politics. Suppose, also, that that prince were endowed with the iron will, the instinctive insight into the hearts of his people, the profound aptitude for government that Henry VIII. displayed, he would be a rash man who would guarantee even now the integrity of parliamentary power or the continuance of cabinet rule."

Finally, Mr. Pollard asks us to remember when we are considering the relations of Henry VIII. and his subjects, that the English of the sixteenth century were both hard-hearted and mercenary:

"Their prevailing characteristics," he says, "were a passion for material prosperity, and an absolute indifference to human suffering. . . . There is no sign that the hideous tortures inflicted on men condemned for treason, or the equally horrible sufferings of heretics burnt at the stake, excited the least qualm of compassion in the breast of the multitude: the Act of Six Articles seems to have been a highly popular measure, and the multiplication of treasons evoked no national protest."

Once more, as in the days of Henry I., we see a tacit alliance between king and people against those who would disturb the public peace by their intrigues and opposition to the crown. How, indeed, could any one talk of tyranny when every measure of the least importance received the express sanction of Parliament?

In his analysis of Henry's career and

policy Mr. Pollard evolves a very interesting formula:

"His reign, like his character, seems to be divided into two inconsistent halves. In 1519 his rule is pronounced more suave and gentle than the greatest liberty anywhere else: twenty years later, terror is said to reign supreme. It is tempting to sum up his life in one sweeping generalization, and to say that it exhibits a continuous development of Henry's intellect and deterioration of his character."

The chief thing which can be urged against this neat and antithetical epitome is the improvement of the King's morals in his last years, and his corresponding profession of higher aims. During the middle part of his life he was at no pains to make such general professions of good intent as are contained in the royal speech of 1545, yet his power had not declined, nor did he need to conciliate popular favor. Mr. Pollard is free from the prejudices of a partisan, and his estimate of Henry's character will carry weight. An intelligent egotist may possess many political virtues, and with a fair share of these Henry VIII. must needs be credited. As to one point, at least, we have little doubt. Mr. Pollard's book is likely to strengthen the general belief in Henry's ability. No politician was ever less a doctrinaire at the outset, but in the end he proved himself able to grasp the bearings of a general principle. His insight deepened with his years, and experience begot clarity of view. No one after Wolsey's fall became in a true sense his minister. Cromwell and Norfolk were useful assistants, but they were hardly more. Among other political accomplishments the King learned how to keep his own counsel. When Sir Henry Wotton went to Italy, Alberto Scipione, an old Roman courtier, gave him for counsel the saying, *Pensieri stretti ed il viso sciolto*. This Machiavellian proverb Henry VIII. had learned before him. From a boy he had been known for his hearty manner. In later years he seemed open, but remained close. He became one who would burn his cap rather than it should know his secrets. The development of such a trait may not be a sign of increasing amiability, but it bears witness to a growing interest in statecraft.

Mr. Pollard, when depicting Henry's attitude towards those ecclesiastical questions which were the chief problem of his time, portrays him as the great Erastian of the Reformation, as an Erastian before Erastus. The truth of this opinion is, we should think, indisputable, for the Act of Supremacy can bear no other interpretation. Accordingly, we shall not discuss the point, but there is one matter connected with it which we must pause to notice. During the sixteenth century two motives were conspicuously strong in the public life of Western Europe. The one was the love of religious truth (or, perhaps, we should say, of dogmatic orthodoxy); the other was worship of the state. It happened inevitably that these two forces were brought into the most acute conflict. The contest of Church and State assumed a new form, but it was no less acute than it had been in the eleventh and twelfth centuries. As a result of this antagonism, more than one country wavered and was lost. At the best it settled a doubtful issue only by the horrors of civil war.

Where others suffered, England obviously escaped. According to the view of all but Catholics, she took the right side, and the breach with Rome cost her no more than the price of individual executions, which were, on the whole, so few as to be called inconsiderable. England, likewise, appears to have been the most Machiavellian of European states at this crisis. As Mr. Pollard says, Englishmen in the reign of Henry VIII. "were dominated by the idea that the State was the be-all and end-all of human existence. It supplied an excuse to despots and an inspiration to noble minds." Under such conditions, "the devotion paid to the State made expediency, and not justice or morality, the supreme test of public acts. . . . Traitors were not executed because they were immoral, but because they were dangerous." And as a result, "the nation purchased political salvation at the price of moral debasement: the individual was sacrificed on the altar of the State."

Here, at last, we come to Mr. Pollard's estimate of Henry VIII. and to the conclusion of a most able book. The King who carried England through the crisis of the Reformation and thus shaped her destinies to the present day, was above all else a self-seeker. He perceived the popular indifference to politics and the popular craving for a commercial success that could be secured only by domestic peace. With this as his main source of strength he made himself a tyrant, "and despotic power developed in him features, the repulsiveness of which cannot be concealed by the most exquisite art appealing to the most deep-rooted prejudice." He sought the greatness of England, and labored for it earnestly, but with no ethical purpose, and simply because he himself wished to be great. This is not altogether a pleasing picture; "yet it is probable that Henry's personal influence and personal action averted greater evils than those they provoked." He saved England from such a calamity as the French wars of religion, and, unless the history of the nation has all been a mistake since 1529, he did well to take the side of Protestantism.

Why the good deeds of St. Louis worked out badly and the bad deeds of Henry VIII. worked out well, we shall leave it for the theologians to determine.

## WOODBERRY'S HAWTHORNE.

*Nathaniel Hawthorne.* By George E. Woodberry. (American Men of Letters.) Boston: Houghton, Mifflin & Co.

There is something of the marvellous about a man distinguished from the common by a rare and beautiful imagination. People are always wanting to have the wonderful faculty explained by establishment of relationship between it and the man's character, with a probable theory of its development through the conditions and circumstances of his life. No man more than Hawthorne has excited this sort of curiosity, and by none has it been more completely baffled. His personality was so vague, so almost imponderable, and his imagination so resplendent, that any attempt to explain the greater by the less is foredoomed to failure. His latest biographer, Mr. Woodberry, has not made the attempt, but, on the contrary, has emphasized a disparity between the man and his genius, and has rather taken the view that his imaginative faculty was not developed, or indeed perceptibly affected, by the actual living of life. Most biographers have looked at Hawthorne through a film; but, before beginning his work, Mr. Woodberry appears to have brushed the cobwebs from his brain and so regarded his subject in the cool light of reason—intellectually, not imaginatively. The result is a readable and valuable book, admirably arranged, and infused with a critical spirit which seems to us rather severe as regards the man, and clear, firm, yet not dogmatic, as regards his work.

The author is largely permitted to tell his own story, to reveal himself through his letters, note-books, and those passages of his tales that are unquestionably autobiographical. This is the best, indeed the only, way to give the personality of Hawthorne solidity or even tangibility. His external life was so slight in outline, so free from human complications, so scantily involved with the work, the pleasure or the pain of other men, that it offers no help for the incarnation of his exquisite genius. And, left so liberally in his own hands, the union of flesh and spirit is not seen to be quite perfect. There is always a shy, unpretentious, honest man separated from his kind by no fault or desire of his own, but by the will of an inexorable genius, from whose thraldom he could never long escape, and to which, after every period of liberty, he was doomed to return.

Mr. Woodberry is so conscious of this separation that he dwells upon the detachment of Hawthorne's imagination from his life and character, and says that he "left himself out of his work as much as any man can." It is true that he left out the self of the Boston wharves, of the Salem Custom House, of the Liverpool consulship, even of Brook Farm. These incongruous practical activities, this living of life, had indeed no sort of effect on his imagination, almost no reflection in his imaginative work. But the self—not simply his own individuality, the self compounded of two centuries of Puritan ancestors—enters largely into his work. He had, as Mr. Woodberry shows, so small a claim to individuality independent of antecedents that he was as a bond-slave to the Puritan idea, the Puritan principle of being. To quote Mr. Woodberry:

"He took practically no interest in life except as seen under its moral aspects as a life of the soul, and this absorption in the moral sphere was due to his being a child of New England. It was his inheritance from Puritanism. What distinguished Puritan life and the people who grew up under its influences was an intense self-consciousness of life in the soul—in a word, spirituality of life; and Hawthorne, as he came to find himself in his growth, disclosed one form of this spirituality both reflectively and imaginatively in his writings, the form that lived in him."

Approaching him imaginatively (as Mr. Woodberry does not), it is quite easy to believe that from his birth he was under what Spiritualists call the "control" of his "grave, bearded, sable-cloaked, and steeple-crowned progenitors." Hawthorne thought these gentry would have disapproved of him and his id vocation of tale-telling; on the contrary, one can believe that they came in force to his christening, dowering him with their all-important conscience, their poverty of human sympathy, and substituting for

their impulse towards physical adventure an imagination perfectly fitted to celebrate them and ensure their earthly immortality. Without hinting at the fascinating notion of direct ancestral intervention, Hawthorne is often dimly aware and resentful of some controlling influence obstructing freedom of action. Referring, in a letter to Longfellow, to his long "accursed solitude" in the chamber under the eaves, he deplores having been carried apart from the main current of life by "some witchcraft or other." It was during these years of almost involuntary self-immolation that the ancestors identified him with themselves, that he became more intimately at home with them, their history, manners, customs, beliefs and thoughts, than he ever did with living men.

During that period the work he was to do and the way it was to be done were determined. He was to immortalize the Puritan, to express his great preoccupation with sin, especially secret sin implacably ravaging the soul; and also his superstitions, his strange childish concern about witches and dooms and hereditary curses wreaking vengeance for wrong upon innocent generations. This was to be done in a form of romantic fiction in which the outward and visible are but signs of the inward and invisible, and the particular person, incident, or object a concrete symbol of a universal, abstract, moral condition.

In the chapter entitled "The Old Manse" Mr. Woodberry's analysis of his author's temperament and art is an admirable bit of criticism. His reflections on racial and local influences are especially suggestive Admitting, for instance, the provinciality of many of the tales, he limits it to the manner, for the following interesting reasons:

"He escapes from provincialism in the substance because he was a New Englander, not in spite of that fact; for the spirituality which is the central fact of New England life itself escapes from provincialism, being a pure expression of that Christianity in which alone true cosmopolitanism is found, of that faith which presents mankind as one and indivisible. Hence arises in Hawthorne a second distinctly Puritan trait, his democracy. He looks only at the soul; all outward distinctions of rank and place, fortune, pride, poverty, disappear as unconcerning things; he sees all men in the light of the judgment day."

Besides being true as regards Hawthorne, this passage is almost exciting as a declaration of faith from a son of New England. But Mr. Woodberry is consistently loyal, and all he says about Hawthorne as a New Englander and about the special appeal of his work to New Englanders is sympathetic and affectionate. No one, we think, who is not deeply concerned about the fair fame of New England can quite agree with his remarks on 'The Scarlet Letter.' Hawthorne, he says, has not here given an historical view of New England; though the tale has its roots in Puritanism, it is only incidentally a New England tale; also, it is a relentless tale, without mercy or hope, without Christ, and therefore describing only a half-truth about Puritanism, and that the darker half. To believe that there was much light, love, and mercy in the Puritans is perhaps a triumph of family pride over evidence. To the moral universality of Hawthorne's great romance ample justice is done, but there is not, we think, adequate toll paid to its extraordinary beauty and the perfection of its execution. "The Scarlet Letter," says Mr. Henry James "has the beauty and harmony of all original and complete conceptions, and its weaker spots, whatever they are, are not of its essence. One can often return to it; it supports familiarity, and has the inexhaustible charm and mystery of all great works of art." Great works of art inevitably suggest enduring existence; to us 'The Scarlet Letter' seems absolutely imperishable.

Some amend for this coolness towards 'The Scarlet Letter' is made in the appreciation of the romance known both as 'Transformation' and as 'The Marble Faun,' which, Mr. Woodberry thinks, has "greater breadth, finer beauty, and more profound mystery than the American tales." Grace and beauty we perceive in it, but to us it is not comparable with "The Scarlet Letter' for unity of design, for force of impression, for dignity and simplicity. In fact, it never seems to us a masterpiece. In spite of his admiration, however, Mr. Woodberry detects the central weakness. His concluding remarks on the romance are worth quoting, both for the substance and the expression:

"One wishes that if he [Donatello] were to have a soul, he might have come into it in some way of natural kindness dissociated from a moral theory. The theory—and here is the one discord—is, after all, felt to be an exotic in the Italian air. . . . It is the same wherever the story is taken up; it is charming as an artistic work, but when we begin to think about it, the method of approach is proved to be wrong, because it solves nothing and ends in futility. It is throughout a Puritan romance which has wandered about and clothed itself in strange masquerade in the Italian air. Hawthorne's personality pervades it, like life in a sensitive hand. It is the best and fullest and most intimate expression of his temperament, of the man he had come to be, and takes the imprint of his soul with minute delicacy and truth. It is a meditation on sin, but so made gracious with beauty as to lose the deformity of its theme; and it suffers a metamorphosis into a thing of loveliness. To us it is in boyhood our dreams of Italy, and in after years the best companion of memory; it is also a romance of nature and art, and of the mystery of evil, shot through with such sunshine gleams, with the presence of pure color and divine forms, as to seem like the creations of the old mythic Mediterranean world, which, though it hold shapes of terror, was the most beautiful land that the imagination has ever known."

## RECENT POETRY.

One of the most curious revivals in recent literary history has been that of the short-lived fame of the late William Ellery Channing, commonly known as Ellery Channing to distinguish him from his more famous uncle of the same name; the nephew being Emerson's friend and Hawthorne's biographer, who has lately died in Concord, Mass., at the age of eighty-three. An admirably printed volume (Philadelphia and Concord: James H. Bentley), bears on the title-page 'Poems of Sixty-five Years, by Ellery Channing, selected and edited by F. B. Sanborn.' The editor speaks simply and touchingly, on the first page, of "the short biography which so secluded a poet must need in coming before the grandchildren of those who first welcomed his verses in the year 1840." Those grandchildren who assume, like other young people, that fame comes at once or never, will be amazed in turning these pages at the strength, the beauty, the grace, the keen sympathy with nature and with the human heart that will be found in the poems of this last of the Transcendentalists. Thoreau's rare qualities long escaped observation, and Channing is too closely linked and allied with Thoreau for him not to share, perhaps, in the same tardy recognition. How many living American poets at any rate could put into fifteen lines such depths and such cadences as in these (p. 168)?

TO-MORROW AND TO-MORROW AND TO-MORROW.

To-morrow comes? dost say, my Friend, "To-morrow?"
Far down below those pines the sunset flings,
Long arching o'er, its lines of ruddy light;
And the wind murmurs little harmonies,
And underneath their wings the tender birds
Droop their averted heads—silent their songs.

But not a word whispers the moaning wind—
Nor when in faint array the primal stars
Trail with the banners of the unfurled Night;
Nor even when the low-hung moon just glints,
And faintly, with few touches, sears the wood;
Not there, not then, doth Nature idly say,
Nor whisper idly of another day;
That other morn itself its morrow is;
That other day shall see no shade of this.

In 'Captain Craig: A Book of Poems,' by Edwin Arlington Robinson (Houghton, Mifflin & Co.), we have the latest work of one of the most promising of our younger poets—one who, like so many persons gifted in the same way, has not yet mastered his own powers and has to follow his muse for a time, not direct it. His very singleness of mind sometimes defeats itself and leaves his meaning unconveyed. Obscure he may be and has a right to be, for his thoughts are always worth consideration, but it must be frankly owned that he sometimes draws near the unintelligible. He brings marvellous color and music into his verse when at his highest point; yet, like Browning, he loses himself and his readers in regions of abstract thought. But he has a nature innately candid, has no desire to pose, and has been perhaps mainly embarrassed by working too much alone. It may be well for him that his surface has not suavity enough. If he said things with more uniform melody, he might be more easily flattered and perverted. A young poet needs some inaccessible domain of even rudeness to which he may retreat to assert himself. This book is likely to be passed unnoticed by all indolent readers, and with impatience by those a little more careful; but those more careful still will revert to it again and again, and wish health, fortune, and encouragement and still farther development to one who could write it. There is not a trivial or meaningless thing in it; and when there is obscurity, it is often like that of Emily Dickinson when she piques your curiosity through half a dozen readings and suddenly makes all clear. Such a song ends at last, as this volume does, with a note of triumph (p. 169):

TWILIGHT SONG.

Through the shine, through the rain
We have shared the day's load;
To the old march again
We have tramped the long road;
We have laughed, we have cried,
And we've tossed the King's crown;
We have fought, we have died,
And we've trod the day down.
So it's lift the old song
Ere the night flies again,
Where the road leads along
Through the shine, through the rain.

. . . . . .

Through the shine, through the rain,
We have wrought the day's quest;
To the old march again
We have earned the day's rest;
We have laughed, we have cried,
And we've heard the King's groans;
We have fought, we have died,
And we've burned the King's bones,
And we lift the old song
Ere the night flies again,
Where the road leads along
Through the shine, through the rain.

We have long since called attention to

the meditative and eminently original poems of "Owen Innsley" (Miss Lucy W. Jennison), and it is pleasant to meet again her name on a title-page; the book in this case being 'Love Songs and Other Poems' (The Grafton Press). This volume contains, not merely thoughtful and melodious English poems, but also songs in German, French, and Italian, besides many translations ranging from the Spanish to the Russian and modern Greek. We extract this inscription of the book to the mother of the poet:

DEDICATION.

Mov'st thou, perchance, in strange and starry spheres
Afar, beyond the impenetrable night
That shrouds the tomb, smiling at the old fears
Of death, encircled by all-conquering light?
Or dost thou sleep where thy last bed was made,
Beneath the violets and the scented grass,
Careless alike of sunshine and of shade,
Of morns that linger and of eves that pass?

Ah! who shall say? No eye can pierce the dark,
No strained ear tidings catch of weal or woe
Out of the silence; and no single spark
Illumes that portal through which all must go.
Yet this we know: Death is a kind of birth,
And brings one sacred immortality;
Thou livest in thy traces left on earth;
Thou livest in thy children's memory.

'The Call of the Sea, and Other Poems,' by L. Frank Tooker (The Century Co.), is one of the many volumes justly dedicated to Mr. Stedman by grateful young poets, and is one of those few, moreover, in which the very finest poem is judiciously placed first (p. 3):

THE CALL OF THE SEA.

Day and night I have heard it: "Arise and come
to thine own!
The surf is loud on the shore, and the spume
is white in the gale,
This is the rapture of living. Oh, how can the
land atone
For the loss of the vibrant shrouds and the
joy of the slanting sail?

"Follow, then, follow the free wind over the waste
of gray!
The sweep of the billows shall rock thee, the
scent of the brine shall allure;
Though Death and Oblivion mock thee, thou shalt
joy in thy master's sway;
His scouring shall arm thee in might, make
thee strong in thine hour to endure.
. . . . . .
"Over the rim of the world make thy uncertain
quest;
Starlight shall mark thy course, fog and the
spindrift bar;
Thou shalt exult in the storm, in the calm of the
sea thou shalt rest;
Seek danger, and find it not; seek peace, and
miss it afar.

"It will lift thee on wings as an eagle; it will
be both singer and song;
A lamp to thy soul in need, a snare to thy
wandering feet;
Blind to thy love or hate, it will save thee alone
of a throng;
True to its own untruth, it will make thy
ruin complete."
. . . . . .
Day and night I have heard it: "Arise and come
to thine own!
The spume is like smoke in the blast, and the
flaws are black on the lee.
Thou who art thrall to the winds that over the
world are blown,
Rejoice in the harping gale, rejoice in the
rolling sea!"

This is the high-water mark of the volume; the low-water mark is to be found in the following unfortunate stanza from the poem "The Messenger" (p. 127):

"The sprawling legs and drooping head
Of his tired steed enraged him so,
That, all his pity being dead,
He struck him many a cruel blow.
As well expect song from dead lark,
Or color from the rose at dark."

'Poems and Verses,' by Edward Sandford Martin, the genial author of 'A Little Brother of the Rich,' will have most interest for many readers by reason of the author's tribute to a classmate, well known as Governor of Massachusetts. The poem (p. 19) was read at the dinner of the Harvard Class of 1877, in Boston, June 29, 1897, the year following Gov. Russell's untimely death:

WILLIAM EUSTIS RUSSELL.

Hard hit? Ah, yes! denial's vain—
Far from our thoughts and wishes too.
Stripped of our best, we meet again
To share a cup that's tinged with rue.
Dear man, how proud he made us all!
Our honest statesman, patriot, mate,
Whose very rivals lived to call
His death a mischief to the State!

With shining eyes we watched his course
Impetuous to an early goal;
A man of an inspiring force,
Whose pockets could not hold his soul!
Who strove without surcease or fear,
Nor from his task withdrew his hand
Until the fame of his career
Edged the far corners of the land.

His head was clear, his heart was good,
His speech was plain without pretence;
Men trusted him as one who stood
For honesty and common-sense.
Ah! not unshared is our distress,
Nor here alone is missed his face;
A million freemen, leaderless,
Still wonder who shall take his place.

When one reads the 'Book of Joyous Children' (Scribners), by James Whitcomb Riley, one feels that such an author has spent the last few non-publishing years to some advantage. The dialect is, of course, that Western child-dialect (*ist* for *just*, for instance) which has been found exasperating to the author's Eastern readers. But the familiar portion of the dialect is always effective, and one envies the "little tads" for whom it is designed, even if he does not know from experience what a "tad" is. The illustrations, but that only one source is mentioned, would seem to come from two—the one set almost too much idealized, the other too little. The zest and the animal spirits of these verses are inexhaustible, rising to the climax of vocal vigor in the following (p. 60):

BILLY AND HIS DRUM.

Ho! it's come, kids, come!
With a bim! bam! bum!
Here's little Billy bangin' on his big brass drum!
He's a-marchin' round the room,
With his feather-duster plume
A-noddin' an' a-bobbin' with his bim! bom! boom!

Looky, little Jane an' Jim!
Will you only look at him,
A-humpin' an' a-thumpin' with his bam! bom! bim!
Has the Day o' Juugment come
Er the New Mi-len-nee-um?
Er is it only Billy with his bim! bam! bum!

I'm a-comin'; yes, I am—
Jim an' Sis, an' Jane an' Sam!
We'll all march off with Billy an' his bom! bim!
bam!
Come hurr*awin*' as you come,
Er they'll think you're deef-an'-dumb
Ef you don't hear little Billy an' his big brass
drum!

Of the various Christmas books for children we should select 'A Pocketful of Posies,' by Abbie Farwell Brown (Houghton, Mifflin & Co.), in which, however, the running border in scarlet seems rather to overpower the rhymed stanzas on the page; and the 'Great Procession and Other Verses for and about Children,' by Harriet Prescott Spofford (Boston: Badger), which has more charming tales and more felicitous word pictures. The opening words, for instance, on "The Great Procession" prepare for this (p. 9):

"Did you ever happen to think, when dark
Lights up the lamps outside the pane,
And you look through the glass on that wonderland
Where the witches are making their tea in the
rain,
Of the great procession that says its prayers
All the world over, and climbs the stairs,
And goes to a wonderland of dreams,
Where nothing at all is just what it seems?

"All the world over at eight o'clock,
Sad and sorrowful, glad and gay,
These with their eyes as bright as dawn,
Those almost asleep on the way,
This one capering, that one cross,
Plaited tresses, or curling floss,
Slowly the long procession streams
Up to the wonderland of dreams.

"Far in the islands of the sea
The great procession takes up its way,
Where, throwing their faded flower-wreaths down,
Little savages tire of play;
Though they have no stairs to climb at all,
And go to sleep wherever they fall,
By the sea's soft song and the star's soft gleams
They are off to the wonderland of dreams."

The volume 'Up from Georgia,' by Frank L. Stanton (Appleton), is one of the healthiest Southern books. It accepts the past as inevitable, at least, if not fortunate, and, among other things, it presents negro life in as cheery a light as before the war, though the following song (p. 27) may or may not represent that:

WHEN THE FALL TIME COMES.

There's somethin' like a jingle an' a tingle in the
air,
Fer the honey's jest a-drippin' from the hives;
The fields are lookin' frosty with the white that
blossoms there,
An' the corn crap's jest the biggest of our lives!

Summer's a-goin'—
Needn't beat the drums;
We're bound to have a showin'
When the fall time comes!

There's somethin' like a jingle an' a tingle every-
where,
An' the blue smoke has a meanin' as it curls;
They're tunin' of the fiddle, an' there's music in
the air,
An' we'll soon be swinging corners with the girls!

Summer's a-goin'—
Needn't beat the drums;
We're bound to have a showin'
When the fall time comes!

It is pleasant to see a volume of poems from Minneapolis, where Mr. Arthur Upson's 'Westwind Songs' is printed (Brooks). These pages do not, like the same author's 'Octaves in an Oxford Garden,' show the imprint of one atmosphere only, but range from the Avon to Mackinaw, and even include the Bodleian Library and "The Flying Cranes" at Crane Island, as well as the wheat elevators of the West and a letter of approbation from Carmen Sylva in Rumania. In another book partly by the same author, 'Poems,' by Arthur Upson and George Norton Northrop (Minneapolis: Brooks), we have varied music, with many suggestions of great composers. It is beautifully printed, apparently for "members of the Samovar Club," but shows an unhappy whim or mannerism by which all compounding hyphens are abandoned, and we read not only of "redgold" and "terrace-stair," but of "blossomchalices" and "tea-rosetrees."

There comes from San Francisco an attractive volume, 'Songs of the Press and Other Adventures in Verse,' by Bailey Millard (Elder & Shepard). The author has that private fault, commonest in journalism, of unexpectedly complaining of his "own sad unworth" in a dedication to his mother; but his strictly professional poems are sometimes full of vigor, like that of the "Lamore Scoop," a railway tribute to a girl reporter (p. 18). The book has sonnets also to "Thoreau of Walden" (p. 111), who is called "Lycurgus of the pen, austere and dread"; and "to Edward Carpenter in England" (p. 101); and to one of the most heroic figures of the nineteenth century, John Muir, the explorer (p. 48):

MUIR OF THE MOUNTAINS.

A lean, wild-haired, wild-bearded, craggy man,
Wild as a Modoc, and as unafraid,
A man to go his way with no man's aid,
Yet sweet and soft of heart as any maid.

Sky-loving, stalwart as the sugar-pine,
Clean, simple, fragrant as that noble tree,
A mountain man, and free as they are free
Who tread the heights and know tranquillity.

A man whose speech hints of no studied art,
But careless straying as the stream that flows,
And full of grace, poetic as the rose
Which to the wind its pure song-petals throws.

A relish of the larger life is his,
And reverence rapt and wonder and deep awe
For any beauty Nature's brush may draw;
A man of faith who keeps each primal law.

Another curious outcome of California life is seen in the occasional books of almost international poetry which come through the Golden Gate, the fruit of foreign travel thither, sometimes Japanese,

then Spanish and then again English. We find such, for instance, in 'Moods and Outdoor Verses' (San Francisco: Elder & Shepard), by Richard Askham, with a word of introduction by Edwin Markham. This book was apparently written mostly in California; the "Envoi" is dated at San Francisco, its place of publication; but the printing was done in London, and the introduction written in New York. There is an agreeable flavor of genuineness and sympathy in the verses; and Mr. Markham has something to learn from his English friends as respects entire simplicity of manner. In one of the poems, apparently written across the water, one finds an agreeable mingling of the two atmospheres—or hemispheres (p. 86).

IN ENGLAND—MAY.
(To —— at the piano.)

If mine could write it as your fingers play,
Across the village and its white highway,
Across the park and palings, you should feel
The sea-breeze blowing through the Golden Gate
Among the many-shouldered hills.
The Bay
Would bid us out again on holiday,
And Tamalpais would set his perfect line
Against the blazing noon.
And you and I
Would make a lovers' picnic in a nook
By some deep runnel, that carves out his way
Among the naked roots of giant trees
Darkening up above,—ancient until
The wonder of the centuries of Man
Seems as a child's.
Then while the shredded light
Twinkled about the gloom of those huge limbs
Circling us in—then would we sigh and say,
"How good to be in England, just for May!"

'Wild Roses of California' (San Francisco: Robertson) has the same bright coloring with the rest, and the same background of flowers; but it has, beyond most of these books, a touch of human interest, and indeed of Wordsworthian simplicity, in the following (p. 26):

THE MINER'S LITTLE DAUGHTER.

My father dear works in the mines,
Down in the tunnels dark.
I sing so much he often says
I am his "meadow-lark."

Our little cabin on the hill
Is 'mid the tall straight pines,
That seem to whisper all the day
To me about the mines.

I've twined some vines about the door,
I keep the house with care.
My father calls our cabin home
His "castle in the air."

I never put my clean gown on
Till just before our tea,
Because when father first comes home
He's black as black can be.

And when he's coming up the trail,
As soon as him I see,
I fly to meet him, and he leaves
Some black, of course, on me.

The man for whom my father works
Is very rich, I'm told;
For he owns land and houses fine,
And mines just full of gold.

I'm rich, I've treasures in the mines,—
"As good as gold" is he;
It's father, whom I love so well,
My father who loves me.

It is interesting to find our new Finnish fellow-citizens contributing like their predecessors to American literature, as in the very interesting and promising little volume 'English Lyrics of a Finnish Harp,' by Herman Montague Donner (Boston: Badger). The increasing interchange between English-speaking nations as regards authors and commercial houses threatens, however, to make local coloring in literature a thing of the past. Here, for instance, is a volume of 'Poems' by Mary Olcott (John Lane). It is dedicated "to Nora Duff in England," with a Greek motto. One of the poems has a title in Greek characters, others are translated from French, and, in short, there is not enough of local coloring in the whole book to show where the poems, as a whole, were written. There is much of thought and beauty in it, but the Prelude leaves it more perplexing than all the rest put together:

"I hide within my book till eyes
Which draw my own shall look and read;
Others may look, yet give no heed:
The printed word has no surprise
For alien eyes.

"Whoever reads, save only one,
May read. But one alone shall find
The impress of the hidden mind,
Uttering speech where speech is none
For but the one."

A fortunate woman is the English Lady Lindsay, who gives herself and others each year a new and happy enjoyment. This year's book is entitled 'A Christmas Posy' (London: Kegan Paul). This author is one of a class, never abundant, now diminishing, who can sing at Christmas tide, each year, a fresh supply of simple Christmas lays or Noels of many lands, and especially from the bewitching old Provençal dialect-lays. The following (p. 50) is, however, an imitation, not a translation, and its cadence is singularly suggestive of William Blake:

IN A GARDEN WILD.

There is a garden,
A garden wild,
And in it wanders
A little child.

The angels are fraying
A path for His feet,
And high in the branches
The birds sing sweet.

And who can know
How His heart may yearn,
Or who can see
What His eyes discern?

But Mary is calling:
"Come home, my son;
The shadows are falling,
The day is done."

'This is for You: Love Poems of the Saner Sort,' selected by William Sinclair Lord (Revell), ranges from Tennyson to Phœbe Cary, and has a little tone of mediocrity, while gathering in some pieces undeservedly neglected, like John Moultrie's 'Forget Thee' (p. 58). The title is the poorest part; the contents are valuable, and singularly free from misprints or undesirable readings.

Mr. Frederic Lawrence Knowles has boldly printed a volume of four hundred pages called 'A Treasury of Humorous Poetry' (Boston: Estes), containing but an unusually small proportion of mere buffoonery like the burlesque on Wordsworth (p. 16) and that on Tennyson (p. 19). Allowing for a few such exceptions, this is the best book of the kind we have ever seen, and the selection and the notes do credit to one of the most discriminating of our younger literary men.

## CIVIL WAR FICTION, AND OTHER.

*Gabriel Tolliver.* By Joel Chandler Harris. McClure, Phillips & Co.

*Bayard's Courier.* By B. K. Benson. Macmillan.

*Aladdin O'Brien.* By Gouverneur Morris. The Century Co.

*Wanted, a Chaperon.* By Paul Leicester Ford. Dodd, Mead & Co.

*Condensed Novels.* By Bret Harte. Houghton, Mifflin & Co.

*The Splendid Idle Forties.* By Gertrude Atherton. Macmillan.

*Barbara Ladd.* By Charles G. D. Roberts. Boston: L. C. Page & Co.

*No Other Way.* By Sir Walter Besant. Dodd, Mead & Co.

During the last quarter of a century the civil war has been the most popular and profitable source of inspiration for writers of American fiction. Every great battle and almost every skirmish has had its celebrant, and the emotions of participants in the struggle have been discussed, analyzed, torn to tatters by gifted children both of the North and of the South. The quality of this fiction is various, ranging from excellent to worthless. The very best was contributed by half a dozen Southern writers, among them Mr. Harris, in the form of short stories written during the eighties. These writers grew up in the dismal years immediately following the war, and they spoke for their people, spoke of their heroism, their suffering and sorrows, in a most touching and surprisingly artistic fashion. The worst of the "war fiction" has been written in the last five or six years, by persons who fall back on memories that are dim and emotions long outworn; and by other, more reprehensible persons who seem to think that emotion and imagination can be supplied by a course of what they are pleased to call historical research.

Mr. Harris's 'Gabriel Tolliver' is a volume of the reminiscent sort. Regarded as a novel, it is very poor work, rambling, shuffling; indeed, without characterization, form, or style. From a passage in the "prelude" we gather that the prelude was an afterthought, meant to declare that the author knows the book to be careless and tedious and unimpressive, and that he is proud of all that. We do not understand such pride, but we feel that it is distinctly not creditable. As a confession of incapacity for a task undertaken, the task of writing a novel, the following passage is incomparable:

"Let those who can do so continue to import harmony and unity into their fabrications and call it art. Whether it be art or artificiality, the trick is beyond my power. I can only deal with things as they were; on many occasions they were far from what I would have had them to be; but as I was powerless to change them, so am I powerless to twist individuals and events to suit the demands or necessities of what is called art."

Perhaps with such original notions of what art is, it would be quite impossible to do anything even remotely artistic; therefore we should perhaps congratulate Mr. Harris on not having tried for art. Besides this pearl of reflection, the "prelude" includes an African legend, the legend of Dilly Bal, a gentleman who sweeps the cobwebs out of the skies. This legend is beautifully told—we would say "most artistically rendered," if it were not for the fear of hurting Mr. Harris's feelings.

'Bayard's Courier,' a long, long narrative of the civil war, from the Southern side, is, without doubt, a flower of historical research. Its genesis is attested by footnotes and maps and a generous sprinkling of dates. The greater part of the matter of this work we are incompetent to criticise. Properly to declare its worth, one would have to know minutely the local history of the war, the topography of several States, and to have at least a good general view of astronomy. The author's knowledge of the position and occupation of several of the heavenly bodies at a given moment about forty years ago especially gives to his novel that air of belonging to the literature of knowledge that removes

it from the jurisdiction of the reviewer of fiction.

The heroes of the novel are twins, separated in youth, and each, in manhood, called to fight for his country, one attaching the idea of patriotism to the North and the other to the South. These twins, known in the army as Junior Morgan and Sergeant Morgan, are unknown to each other, and are always riding across country, bearing important dispatches. It is in describing these rides that the author shows off his astronomical lore:

"The country was open," he says. "The stars were out—in front of Junior shone Arcturus and at his right rear Capella. Seney could see the Pleiades hanging over Frederick, and southward the Bowman, while in the zenith over all the three was Vega, shining peacefully—in the zenith for Jackson and Miles at Harper's Ferry, in Longstreet's zenith at Hagerstown, and overhead of Franklin at Crampton's Pass—shining peacefully on every enemy; peacefully for McClellan back behind Frederick, for Lincoln sleepless in Washington, and for Davis far away from tidings of the Southern army. Men must strive and the impartial stars must shine."

Capella shining at Junior's "right rear" is a fine touch; the fact gives a sort of *cachet* of exact study, and the phrase has a military ring. Though we may not impugn Mr. Benson's knowledge, we may dissent from his wisdom as expressed in aphorism. Possibly the stars must shine, (though nobody can tell what they are doing on cloudy nights), but it is not always true that man must strive, especially without reference to his chance of success in the striving. Mr. Benson, for instance, should not have striven to write a novel—he has no natural gift for novel-writing and no acquired skill. Of course he might have been all right if he had striven to write a history or geography or astronomy.

There are some good things in the tale of Aladdin O'Brien, odd bits of character and scene taken from life, well observed, and imaginatively described. The chapters concerning Aladdin's early relations with the family of Senator St. John, his residence with the excellent Widow Brackett, and his determination to become a writer (preferably a poet), promise an interesting development of character. But Mr. Morris apparently cannot write long from the inside out; and here, as in his first story, 'Tom Beaulieu,' his characterization goes to pieces, and Aladdin sinks to the conventional hero of fast-following adventures. Mr. Morris appears to have "got up" the civil war, especially the battle of Gettysburg, with exemplary thoroughness, but the moment chosen to unload his information is not opportune. What his readers want is a thorough representation of the heart and soul of Aladdin O'Brien, and the most thrilling adventure offered in place of that is but dust and ashes. Yet, in spite of obvious defects, Mr. Morris's work is very interesting. It has sincerity and aspiration, and unmistakable though uneven literary quality. The language is occasionally too independent of precedent. Is it good American to write, "Mr. Bispham absurded," "self-centration," "Claire was a little party"? Is it likely that an eminent Senator's daughter, even at a tender age, would say, "I oughtn't to *of* come," "I know you *done* your best"?

'Wanted, a Chaperon,' by the late Paul Leicester Ford, is an elaborately decorated work. There are several illustrations drawn by Mr. Christy and others, and colored by process. Both drawing and coloring celebrate the mighty dressmaker of the young lady who needed, rather than wanted, a chaperon. Besides these full-page splendors, there are marginal decorations which enclose the text like a frame, and these decorations include many devices—bottles and ribbons and unnatural flowers and monograms. The story is trivial, and does not distract attention from the revelation of the possibilities of printing.

The last volume to appear with Bret Harte's name on the title-page contains half a dozen burlesques of contemporary authors. They are not inferior to a volume of the same sort of stuff written by him many years ago; therefore they will be acceptable to persons whose sense of humor is gratified by exaggeration and frolicsome distortion of names and epithets. A few of the sketches are very funny—funny enough to make Mr. Kipling or Mr. Hope laugh, but not Mr. Hall Caine.

We cannot but fear that Mrs. Atherton's dream of the splendor (if not the idleness) of California in the forties is too comprehensively *couleur de rose*. Even fifty or sixty years ago the earth was aging and a little weary, and we find it difficult to believe that between the Sierras and the sea there lay a happy valley where life was all passion and costume and scenic effect. Nevertheless, there was enough of a now vanished picturesqueness to excite the fancy of a story-teller, and Mrs. Atherton's fancy is exuberant. Moreover, she has an instinct for melodrama and heroics, so her action and people admirably fit the scene. All the stories are romantic, and a certain monotony of impression may be escaped by reading only one every week or month.

One-half of Mr. Roberts's 'Barbara Ladd' is given to her childhood, and most of that half to her attempt to evade the guardianship of her uncongenial maiden aunt. The sorrows of childhood are always touching, but, set forth at length in print, they come to bore maturity, and even to defeat the chronicler's object by forcing the conclusion that the child under discussion was responsible for the sorrows—was, indeed, a bad child. Barbara, however, is never a real child, never a real woman, but always a conventional heroine of the impulsive, emotional type. The whole romance is most correctly of a literary convention. The principal characters, who are of Southern extraction, live in a small Connecticut village during the period of the Revolution. Their minds, their manners, their habits, and speech differentiate them from real people of any country or time, most conspicuously from any conceivable New Englanders of the later eighteenth century. They are all figments of the romancer, who industriously strives to undermine American common-sense, to persuade the nation that its ancestors were persons of the highest distinction, and that they preserved in the wilderness and through generations of common and rude conditions the customs of an aristocracy and the speech and manners of a needy playwright's prince. Mr. Roberts's tale is not any worse than the majority of Revolutionary romances. It is indeed somewhat better than most, for it has passages that breathe the freshness and fragrance of the woods and waters, and, except for the pompous, ridiculous dialogue, is written in good, unaffected English.

Sir Walter Besant was familiar (fluently, almost fatally familiar) with the history of his country, and with the strange things that might be done under the protection of her laws. In his last book, 'No Other Way,' he describes the pathetical situation of a young widow of the eighteenth century, who could not pay her honest debts, and who therefore went to prison and married a negro, of gigantic stature and awful aspect, under sentence of death. Legally, the husband assumed the lady's debts, and so she cheated her creditors and would henceforth have been free as a bird, and happy, if the negro had not cheated the hangman and lived to seek his bride. Every conceivable inconvenience resulting from the negro's selfish behavior is set forth, and an ingenious way out at last discovered. One telling of the tale would be really interesting, but it is all told several times by different people in slightly changed phrases. Perhaps the author did not revise his work, and should not be held responsible for such repetition, though he numbered among those worthy gentleman too frequently intoxicated with their own verbosity. The novel on the whole does not discredit his reputation, which, except when associated with Mr. Rice, was never a reputation to be injured by a book that expresses a genial temper and an otherwise harmless mediocrity.

## CHILDREN'S BOOKS—II.

Happy the boy or girl who shall receive as Christmas gift 'The Book of Romance,' of Andrew Lang's editing, always provided such recipient can keep the book from predestined parental monopoly. The Tales of the Round Table, the Stories of Roland, of Robin Hood, of Diarmid, and other racial fairy-tales are given in the best way, keeping close to original sources. Mrs. Lang has written all but one of them, and H. J. Ford has most understandingly illustrated them with full-page drawings, in colors, and in black and white; the whole a beautiful volume from the house of Longmans, Green & Co. Pleasant, also, for both young and old is Paul du Chaillu's account of his journey to King Mombo's African kingdom, and of his adventures with his friendly band of native huntsmen, among forest creatures, gorillas, elephants, and lesser jungle folk. The illustrations, by Victor Perard, help to bring the ways of African man and beast vividly to view. Charles Scribner's Sons are the publishers. From the Macmillan Company comes another good story for youth, 'Pickett's Gap,' by Homer Greene, with illustrations of a most agreeable sort by J. Rosenmeyer. The story deals with the staking out of a railroad by two rival companies, and the part played in connection with it by a boy over whose grandfather's acres the railroad is to go. D. Appleton & Co. publish 'Jacks of All Trades,' by Katharine Newbold Birdsall, with attractively drawn illustrations in colors (*i. e.*, black and white with occasional red spots) by Walter Russell, and with many expressive little outline sketches by E. S. Truman scattered through the text. The story is about a family of children who turned to account their various abilities for practical work, in order to help the family finances. The note of the small child is a little forced

here and there, and the love interest of the book is too large for its age. But on the whole the story is pleasing and sound, will hold the youthful interest, and, perhaps, suggest sources of usefulness.

'The Other Boy,' by Evelyn Sharp, with illustrations by Henry Sandham (Macmillan), tells how a delicate, clever lad came to live in a family of such boisterously bumptious children that we rub our eyes, asking: "Can this be England?" Having accustomed ourselves, however, to their squabbles, to their calling Miss Nibbins, their favorite governess, "Nibs," and to their father's having much their own style of manners, we perceive that their hearts are meant to be and mainly are in the right places, and we decide that the story will undoubtedly interest young readers, while it will prove harmless if accompanied by a judicious amount of corrective commentary. 'Miss Lochinvar,' by Marion Ames Taggart, illustrated by W. L. Jacobs and Bayard F. Jones (Appletons), is a story for girls, and makes good if rather protracted reading, though with a trend toward the fault of causing all the graces and virtues to centre in one girl. An attractive girl she undeniably is, bringing out of the West heavy batteries of charm and unselfishness to the conversion and regeneration of an unruly family of New York cousins. She makes the baby behave well at table, she brings together the father and the incommunicative son; reconstructs the mammon-loving daughter, wins the tennis match, rescues the ill-treated street dog, and is, indeed, in continual evidence as a saving angel of grace. The story is not exaggerated as such stories go, and it is fitted to attract and interest girls; but we look askance at books where one young person is wiser and better than all other persons of all ages. The chorus of her praises is too deafening.

From A. C. McClurg & Co. comes 'Little Mistress Good Hope,' by Mary Imlay Taylor, with a tasteful frontispiece in colors, and prettily designed illustrations in black and white, touched with greenish blue, all by Jessie Willcox Smith. This is a book of pixy stories, the little creatures being helpful to good children and properly malicious and spiteful toward abbots and tax-gatherers. In the interest of perfect taste and appropriateness, it might have been well to omit the scene of the abbot's frivolous conduct under the influence of a pixy swallowed alive. Incidental pictures of England in her old and merrie times accompany the more serious business of fairy tricks.

R. H. Russell publishes in a handsome volume Richard Le Gallienne's 'Mr. Sun and Mrs. Moon,' a set of so-called children's verses with large full-page illustrations, made in a quaint, interesting fashion. A few of the verses will catch the ear of childhood, a few the understanding. Others are of childhood as contemplated by a grown-up imagination, charmingly tender here, but freakish there, and not above reproach in the matter of rhythm.

'Miss Muffet's Christmas Party,' by Samuel McChord Crothers, with illustrations by Olive M. Long (Houghton, Mifflin & Co.), may worthily stand on the bookshelf that holds 'Alice in Wonderland.' Here is nonsense with distinction, full of nourishment for the children who know their classics in fairy lore, moral tale, and fable. We should say that it would be a favorite proportionately to the young reader's previous bringing up in the way he should go. As to parents, uncles and aunts, a rare flavor of delicate wit shall be their happy portion over and above the children's delight in this choice little book, with its illustrations near of kin to the story in attractiveness.

'The Outlook Story-Book for Little People,' edited by Laura Winnington and published by the Outlook Company, is cheerfully bound, handsomely printed, and illustrated with drawings and photographs of a high order of merit. It is much to say of fifty-seven contributions in prose and rhyme that the greater number are really suitable for "Little People." If here and there a story may be too complex in idea or expression, it is almost invidious to say it when so many are what they should be—short, natural, or naturally impossible, ranging from fairyland to the homes of squirrels and tree-toads. The book is one to be welcomed and desired.

'The Making of a Girl,' by Eva Lovett (J. F. Taylor & Co.), a series of informal chats between an aunt and a Mollie, contains good counsel for girls in their teens as to motives and standards. The attitude is one of sympathy and good sense, and the advice given is both high-minded and practical. It may seem to the reader that a few of the maxims are open to misinterpretation. For instance, in a chapter on Reticence, the dictum, "Never tell the *whole* of the story you are telling, nor speak out your *entire* thought on any matter," might prove misleading to the youthful intelligence, which is apt to fall upon the rule and miss the principle. The book may be classed with the season's helpful literature.

---

*Cross Country with Horse and Hounds.* By Frank Sherman Peer. Scribners. 1902.

The author submits an apology, if one be required, in presenting his book as the only one ever published in America on the subject. Strictly speaking, he may be right; but in 1852 there appeared from the pen of that thorough sportsman, the late Henry William Herbert ("Frank Forrester"), a charming little volume entitled 'The Quorndon Hounds.' In the days when shotguns and fine dogs were rarely found in the possession of any but those who went afield because of the sportsman's instinct, and to whom the mere making of big bags was a secondary consideration, Frank Forrester was an authority on all kinds of hunting and shooting. Meantime, the erection of barbed-wire fences has become so general that only here and there can an ideal country now be found. It is true, however, that in near proximity to some very excellent packs which habitually follow the drag, there are counties in Maryland which were regularly hunted in ante-bellum days, and which are now overrun with foxes. The author takes the reader over the course traversed by one unfamiliar with the hunting field. First, a glossary of hunting words and phrases is followed by dissertations on the conformation, breeding, schooling, and purchase of hunters. The author naïvely remarks that he now rejects many theories which a few years ago were considered true gospel, and suspects that in as many years hence he may repudiate some things which he now asserts with much assurance. This frank admission may make it pardonable to take issue with the author now without waiting for the lapse of time and the mellowing influence of years to bring about a modification of his views.

In several instances he attacks generally accepted views; he may be right, but his reasoning is not conclusive. In fixing upon a standard of conformation, the author opposes the demand for "sloping shoulders," and does not seem to appreciate the reasons for requiring that a saddle-horse or hunter shall not have an upright shoulder. Technical reasons based upon scientific principles may be readily found for this. Elevated withers, not too high and thin, are usually accompanied by sloping shoulders and a rather deep chest; the parts are not absolutely dependent upon each other, and therefore exceptions may be found to this rule. Horses with such conformation are better adapted to saddle purposes than the horse with upright shoulders. If the shoulder-blade is long, broad, and well-sloped, the saddle will rest properly in its place; while if it be short and upright the saddle will have a tendency to work forward on the withers. Horses with upright shoulders are usually rough under the saddle. The author's difficulty in placing himself in the ranks of those who advocate the "slanting shoulder" seems to be that he has rather ill-defined ideas as to what constitutes a sloping shoulder. He presents an illustration of upright shoulders in Barrett, sired by Bonnie Scotland, the premier stallion of the Belle Meade stud for many years. Judged with the French measuring machine, or by the eye alone, the illustration does not sustain the charge of upright shoulders, nor is the statement borne out by the many descendants of Bonnie Scotland, recently dispersed at the closing-out sale of the Belle Meade horses. The objection to drawn illustrations is that one may distort them and thus become convinced through an erroneous hypothesis. The selection of a hunter or any other class of saddle-horse for one's self is a difficult matter; to select one for a friend is doubly so. Having to all appearances a perfect conformation, a horse may not fit a rider, and there may be some disagreeable feature in his movements which will make him otherwise undesirable.

The author has evidently found much enjoyment in the breeding of horses, but here again he has established some theories from individual experience which are not borne out by the accumulated experience of others. The praise lavished on the balance seat, and the sweeping condemnation of gripping the horse with the legs, puts the author in the light of being bent more on change than improvement. Balance is the most important element of a good seat, but the perfect seat is that derived from a combination of balance, friction, or grip and the use of stirrups. Balance will do as long as everything goes smoothly, but a swerve or plunge must find the legs properly placed to close the thighs and knees quickly, else the rider may get an unnecessary fall. The author makes a strange mistake in writing of "the forked or military seat" as if the terms are synonymous. Again, he says: "The military seat with long stirrup leathers has no place in the hunting-field where there is

jumping to be done." Long stirrup leathers have no place in the hunting-field because they deprive the rider of the chance of properly gripping his horse. The military seat as specified in the cavalry-drill regulations of the regular army and other service text-books does not admit of long stirrup leathers; in fact, it contains all the essential elements of the correct seat as described by the author and shown in his illustration facing page 92. The illustrations will appear to horsemen generally as incorrectly titled, for Nos. 1 and 2 show the seat best adapted for gripping, whereas Nos. 3 and 4 illustrate the "tongs-across-a-wall" seat, in which it is impossible to grip the horse because, with the leg extended, the thigh muscles are rounded instead of being flat or hollowed. If these figures correctly show the ideas of the author as to the balance and grip seat, then by all means let him adhere to his language, but the illustrations are sadly at variance with all accepted nomenclature. In illustrating how a horse should be allowed to gather himself when approaching a fence, the figures explain (opposite page 118) what the author desires to show, but by modern photography and in other ways it has been clearly demonstrated that the horse never takes the extended position presented here.

But while arguing with our author we are missing the companionship of the horse and losing the scent of the fox, which are given separate chapters, followed by the meet, riding to covert, and the hunt dinner. Altogether, the book gives one's nostrils a whiff of Genesee Valley air when the autumn leaves are turning and the crops are laid away. In a country where the going is stiff but the hearts are courageous, we can no longer delay to split hairs concerning technical details, but be off to the covert side where the hounds are drawing and from whence the fox will soon be viewed away with the pack in full cry. Typographically the volume is all that can be desired. The illustrations are artistic, and the colored frontispiece especially pleasing.

BOOKS OF THE WEEK.

**"Interesting and Clever, . . .**

it will find a warm welcome. The plot is wholly new and decidedly entertaining . . . The situations that the Englishman, madly in love with his employer, is placed in, are most humorous. One can not foresee how the plot is to be untangled, but the way in which this is done is quite the most clever thing in the book."

—Springfield Republican.

# The ATLANTIC MONTHLY 1903

**Loyal to its brilliant past** **In touch with present conditions**

### HIS DAUGHTER FIRST

By Arthur Sherburne Hardy

*Author of "But Yet a Woman."*

The chief Atlantic serial of the year exhibits to the full the fine narrative genius of our present Minister to Spain. Its plot turns upon the love entanglements in a New Hampshire house-party and the complication of the New York money market. Mr. Hardy has never created more attractive characters or presented a truer picture of contemporary life.

### DAPHNE

**AN AUTUMN PASTORAL**

By Margaret Sherwood

*Author of Henry Worthington, Idealist.*

Against a mellow Italian background the love story of a sensitive American girl and a mysterious pagan person is very attractively presented. It is told with so intimate a sense of the genial pagan spirit that it is fit to rank with such classics as Walter Pater's "Apollo in Picardy."

### LIFE OF THE AMERICAN CITIZEN

Current Experience and Character of the American of To-day.

The Atlantic will print a group of papers, describing, from fresh points of view, the influence of our present civilization and social surroundings upon the life of the "average man." Institutions as varied as the School, the Church, and the Stock Exchange, professions as far apart as the Law and the Trained Nurse will be discussed by competent writers. The first of these articles will be **THE SCHOOL**, by **President Eliot of Harvard.**

### MY OWN STORY

John T. Trowbridge, one of the surviving contributors to the first number of the Atlantic, has written his autobiography under the felicitous title of "My Own Story." This gifted and prolific writer has led a life quite as attractive as his most stirring narratives.

### SIR LESLIE STEPHEN

Sir Leslie Stephen, the eminent essayist, formerly editor of *The Cornhill Magazine* and *The Dictionary of National Biography*, is expected to contribute a group of reminiscent papers, dealing with English men of letters during the last half century.

***Among other Contributors to the Atlantic for the coming year are:***

E. W. HORNUNG
FLORENCE WILKINSON
M. A. DeW. HOWE
WM. G. BROWN
JACK LONDON
FRANCIS GRIERSON
GOLDWIN SMITH

# IMPORTANT SCRIBNER BOOKS

# THE de WET BOOK

*is everywhere hailed, on publication, a remarkable narrative*

"A story of important events simply and well told." — *N. Y. Times Saturday Review.*

*From the New York Tribune of December 6, 1902.*

"*THERE may be other histories more comprehensive and more judicial, but for* REAL, RED-BLOODED INTEREST, *commend us to THREE YEARS' WAR, written by CHRISTIAAN RUDOLF DE WET and published to-day by* CHARLES SCRIBNER'S SONS. *For it is not only a book written by a hand that lately held a sword—or a rifle, and sometimes, by his own confession, the sjambok!—but it is THE FRANK OUTPOURING OF THE MIND of the man whom we may well describe as 'THE NOBLEST ROMAN OF THEM ALL.'*"

"The Evening Post compares the book with Grant's Memoirs and likens the writer to Cromwell."

**With frontispiece portrait by John S. Sargent, plans, map, etc., $2.50 net. (Postage 28 cents.)**

"The sanest, most catholic, and most conclusive art criticism of recent times."—*Atlantic Monthly.*

**The New Illustrated Edition of**

## ITALIAN CITIES

**By E. H. and E. W. BLASHFIELD**

With 48 full-page illustrations in tint from photographs. In two volumes. *$5.00 net.*

EDITH WHARTON calls it "the most interesting book of Italian impressions that has appeared in English since Symonds's volumes. . . . Perhaps, indeed," she adds, "the most remarkable quality of the book is the skill with which various tastes are taken into account, with which the claims of erudition and emotion, of historic exactness and poetic fancy, are fused into a homogeneous 'sensation' of Italy."

*Each of these Books is fully and richly illustrated.*

## UNKNOWN MEXICO

**By CARL LUMHOLTZ**

1,100 pages, 530 photographs, 16 color plates. Two volumes, *$12.00 net.* (Carriage extra.)
The most important record of exploration and discovery in America for many years.

## THROUGH HIDDEN SHENSI

**By FRANCIS H. NICHOLS**

Profusely illustrated from photographs. *$3.50 net.* (Postage 21 cents.)

"It informs us (about China) as we have not before been informed."—*Outlook.*
"A fine piece of literary workmanship and a most delightful narrative of travel."—*The Nation.*

## ACROSS COVETED LANDS

**By A. H. SAVAGE LANDOR**

With 150 photographs by the author. Two volumes. *$7.50 net.*

Dealing importantly with Persia and Russian ambitions, it is also a travel work of absorbing interest, studied with the freshness of view and keenness of observation characteristic of Mr. Landor's former well-known works, and, as in those works, full of unusual incident.

## ALL THE RUSSIAS

**By HENRY NORMAN**

More than 100 illustrations from photographs. *$4.00 net.* (Postage 26 cents.)

"Of the charm of this book no quotation will convey an idea, nor can we here do justice to its importance."—London *Academy.*

# CHARLES SCRIBNER'S SONS, New York

# The Nation

VOL. LXXV—NO. 1955. THURSDAY, DECEMBER 18, 1902. PRICE TEN CENTS.

Branch Public Library
Rockland St. 21 '08

"Four first-class books for the young have come from the Appleton press, each with an attractive title, printed in fine style, well illustrated, and in each case presenting a story of marked interest by a noted writer of that class of literature."—*Philadelphia Item.*

## WITH THE FLAG IN THE CHANNEL

Or, The Adventures of Capt. Gustavus Conyngham

By JAMES BARNES

Author of "Midshipman Farragut," "Commodore Perry," etc.

Illustrated by CARLTON T. CHAPMAN

(YOUNG HEROES OF OUR NAVY SERIES)

*12mo. Cloth, 80 cents net; postage, 8 cents additional*

This wonderful story of adventure at sea is founded upon fact. Captain Conyngham was the predecessor of Paul Jones. When Benjamin Franklin and Silas Deane of the Marine Committee of 1777 issued the commissions for vessels which were to sail in the capacity of national cruisers, the first was given to Captain Conyngham. His brilliant exploits filled England with dismay. This commission was afterwards lost, and as a result he never received the rewards to which he was entitled. Mr. Barnes recently discovered this commission in an old print-shop in Paris and now has it in his possession, a reproduction being printed in the book.

*For Girls and Boys*

## JACKS of ALL TRADES

*A Story for Girls and Boys*

By Katharine Newbold Birdsall

Illustrated in Two Colors by WALTER RUSSELL with Many Text Cuts.

12mo. Cloth, $1.20 net.

Postage, 12 cents additional

"We're not telling who ate the goodies Katrine cooked, bought the doll's house that Jack built, hired out the baby to a hungry heart for $5 an hour—once—or earned the $500 reward; but this is too near giving it all away. 'Jacks of All Trades' is an inspiring volume."—*New York Evening Sun.*

"Jack and Ben Drury are the kind of boys one likes to read about."—*New York Press.*

"A most wholesome and interesting story."—*Pittsburg Press.*

"A good holiday book."—*Philadelphia Inquirer.*

*A Story for Girls*

## MISS LOCHINVAR

*A Story for Girls*

By Marion Ames Taggart

Illustrated by WILLIAM L. JACOBS

12mo. Cloth, $1.20 net.

Postage, 12 cents additional

"The sort of story for girls of the grammar or high school age. It is written with charm."—*Philadelphia Inquirer.*

"Miss Lochinvar is the kind of a girl one would like to know."—*New York Press.*

"An excellent Christmas gift for a growing girl."—*Cleveland Leader.*

"A nice book for nice girls."—*New York Evening Sun.*

## THESE Are THE BOOKS TO GIVE TO YOUR Boys and Girls

## BEHIND THE LINE

A Story of School and Football.

By RALPH HENRY BARBOUR

Author of "The Half-Back," "Captain of the Crew," etc.

Illustrated by C. M. RELYEA

*12mo. Cloth, $1.20 net; postage, 12 cents additional*

"An exciting, yet wholesome tale."—*Columbus (Ohio) Despatch.*

"He writes with a picturesque vigor and a knowledge of his subject."—*St. Louis Post-Despatch.*

"A capital, exciting tale. . . . It would make a very acceptable gift-book for boys."—*Brooklyn Standard-Union.*

"In its description of football games this story is full of lively action, and coming now in the full glory of the football season ought to meet with instant success."—*New York Press.*

"A good story of life at school and at college, where the gridiron is the centre of so many contests and of so many of the hopes of young men who are apt to forget that there is anything else in the world but sport. The boys in this story have higher and better views of life, but that does not prevent them from being good football players."—*Philadelphia Inquirer.*

# THREE OF THE SEASON'S NEW BOOKS

*A FIRST-RATE NOVEL*

## LOVE WITH HONOUR

By CHARLES MARRIOTT

Author of "The Column" (18,000). Decorative cover, 12mo, $1.50

THE LONDON TIMES: "The book contains some exquisite pictures of life, touched with real poetry. Has many pages of originality and charm, and should not be missed by any one who keeps an eye on the English novel."

*A BEAUTIFUL STORY-BOOK*

## DREAM DAYS

By KENNETH GRAHAME

Illustrated (10 photogravures, tail pieces, end papers, etc.) by MAXFIELD PARRISH. Decorative cover, 8vo, $2.50 net.

PROF. HUBERT HERKOMER, R.A.: "Mr. Parrish has absorbed, yet purified, every modern oddity, and added to it his own strong, original identity. He has combined the photographic vision with the pre-Raphaelite feeling. He is poetic, without ever being maudlin and has the saving clause of humor . . . He will do much to reconcile the extreme and sober elements of our times."

*BELLES LETTRES*

## LOWELL'S EARLY PROSE WRITINGS

With a Preface by Dr. EDWARD E. HALE, and an Introduction by WALTER LITTLEFIELD. With a portrait of Lowell in 1843, and a decorative title page. Boards. 12mo, $1.20 net.

THE ST. LOUIS MIRROR: "They afford us a delightful and interesting insight into the gradual moulding and expansion of Lowell's sphere of thought. . . . It fills a literary want."

If you require suggestions for a selection of seasonable books, for yourself or for gifts, write for a free catalogue to

**JOHN LANE** THE BODLEY HEAD 67 Fifth Avenue **NEW YORK**

## A Christmas Offering!

Are there not many who will gladly, at once, contribute, as God has prospered them, to the building fund of **Bethesda**—the House of Mercy—the Leper Home in Surinam, Dutch Guiana? The Rev. Henry T. Weiss, the superintendent and missionary director, and Mrs. Weiss, are at present in this country in order to appeal to Protestant Christians of every name to assist them in gathering a building fund of **$100,000,** so that all lepers—there are 3,000 in Surinam—may be tenderly nursed and cared for at **Bethesda.** President Roosevelt has lately—day before Thanksgiving—received these devoted missionaries at the White House, and cordially welcomed them on their errand of mercy to the United States. He was most hearty in his greetings, and said, in part: "Mr. Weiss, I am glad to see you here. Tell your people that I am highly interested in your work among the lepers, and that I personally greatly value your efforts. Tell the lepers in Surinam that I think of them, and that my sympathies go out to them." Mr. Weiss replied to these kind words of the President: "My lepers have commissioned me to give their respectful greetings to Father Roosevelt," and Mrs. Weiss added: "And to his whole family." "Thank you! thank you! thank you!" exclaimed President Roosevelt, who showed that he was delighted with the greetings. Contributions for the leper building fund will be most heartily acknowledged, and soul-stirring booklet sent, **"With the Lepers in Surinam,"** written by the wife of the British Consul at Paramaribo. "He gives twice who gives quickly." Address

**REV. HENRY T. WEISS,**
**12 Church Street, Bethlehem, Pa.**

IF YOU WANT TO KNOW ALL ABOUT Ex-Speaker Thomas B. Reed's great library of MODERN ELOQUENCE, and if you would like a handsome portfolio of specimen pages, including fine photogravure illustrations, address the publishers, JOHN D MORRIS & CO., 1163 Commonwealth Bldg., Philadelphia.

An Entirely New Book by the Author of the Famous **WOOD FOLK SERIES** (60,000 copies sold)

# The Nation.

NEW YORK, THURSDAY, DECEMBER 18, 1902.

## The Week.

Events and opinions touching the Venezuelan question are overlying each other so rapidly that the lower stratum of fact is already passing out of sight. The Administration at Washington is blamed in some quarters for entering into any agreement with England and Germany which should recognize their right to coerce an American republic. But the principle upon which our Government has acted is a perfectly sound one, and its present position is unavoidable, unless we are to assume responsibility for the debts and also for the manners and behavior of the Spanish-American countries. No sane person would think of doing so. In order to assume such responsibility, we should have to take possession of the countries themselves and regulate their debts and their manners at the fountain-head. We are not prepared for that at present. Therefore, logically, we must say to other governments, when they have claims or complaints against the countries south of us, "Collect your claims, obtain your satisfaction in your own way, subject to the law of nations which you invoke, but do not make any permanent lodgment on the soil of the offending state." Before anybody blames the Administration, let him say what he would himself have done if he had had charge of public affairs.

---

President Schurman had better be careful how he criticises the masterly inactivity of Congress in regard to the Philippines, unless he wishes to hear himself denounced as a "little American," and a traitor. On Thursday night he had the audacity to say that the financial distress in the islands was due solely to "the palpable poltroonery and cowardice of the members of the American Congress." Instead of joining in the cry that the quicker the Filipinos learn English the better for them, he declared "that to insist upon one language in the Philippine Islands is a crime against nature and in defiance of history." Really, this sort of talk would condemn him to a term of at least ten years in a Federal Penitentiary if the Imperialists could sit on his case. Worst of all, President Schurman failed to agree with President Roosevelt that the flag may stay in the Philippines as long as it will in Alaska. Should it stay there after our work is done, the Filipinos, he asserted, would have to be either subjects or citizens of the United States. As if this were not heresy enough, the Chief Signal Officer of the army, Gen. A. W. Greely, made himself a candidate for the retired list by declaring that he never had believed in the war with Spain. The most disgusting part of all this is the evidence it affords that the anti-Imperialists refuse to be bound by repeated official proclamations that they are all dead.

---

Mr. Samuel Gompers and a number of gentlemen who are in general sympathy with him on labor questions, have prepared and signed a protest against the recommendations of Prof. J. W. Jenks to the Secretary of War touching Chinese labor in the Philippines. They say that the recommendations, if carried out, would result in a system of coolie labor little better than slavery, and that they would also expose the people of the United States, as well as the Filipinos, to the danger of a degradation of labor and a lowering of the standard of living. They contend further that the avowed object of these recommendations, which is to promote the exploitation of the islands by American and European capitalists, is not a sufficient offset to the evils which Chinese contract labor brings in its train. Professor Jenks is a pretty good authority on economic questions, and he has studied this particular subject on the ground. At the same time it must be said that the economic question is not the foremost one to be considered in this case. The first consideration here should be the happiness of the people to whom the country belongs, the Filipinos—upon which there is, no doubt, much to be said pro and con. The second is the kind of moral teaching which the United States gives to its own people, and to the world, when it lays down rules for immigration, for contract labor, and kindred matters. And here we have to confess that Professor Jenks's plan, with its prohibitions and restrictions on the free movement of Chinese laborers after their admission to the Philippines, is repulsive to American ideas of freedom and individuality, and ought to be promptly rejected by Congress.

---

In his recent communication to the *Evening Post*, the Pension Commissioner, Mr. Ware, asked the aid of that newspaper in opposing the bestowal of pensions upon men convicted of infamous crimes. He also called its attention "to the propriety of making a fight upon the joint resolution of July 1, 1902, which was a bill to pension the deserters of both armies." Mr. Ware's opposition is the more praiseworthy because this joint resolution became a law entirely by the signature of Mr. Ware's chief, Theodore Roosevelt. The "hero of San Juan Hill," in stump speeches, messages, etc., has read us so many sermons on the vicious influence of the craven and the weakling that we can explain his action only on the ground that he did not read the bill when it was presented to him. It consists of only a few lines, and provides that, in the administration of the pension laws, any one who was honorably discharged from his *last* contract of service "shall be held and considered to have been honorably discharged from all similar contracts of service." He may have deserted a dozen times from Confederates or Federals, and been the most conscienceless "bounty-jumper" in the army, but if he stayed six months in the service the last time he enlisted, he is to be pensioned along with the man who served from Sumter to Appomattox! That Mr. Roosevelt could have approved this law knowingly is impossible of belief, and he should join in the demand for its repeal.

---

At the National Reciprocity Convention at Detroit last week, Gov. Cummins of Iowa spoke like a man having solid ground under his feet and a firm backing among his constituents. "Tariff schedules," he said, "like other laws, are to be made, unmade, and remade according to public needs, and we are not to be warned off by the statement that we are on holy ground and that the sacred vestments of the priests are not to be touched by profane hands." He denied that it was necessary to change the whole tariff because a part of it needed to be changed. That notion was the refuge of two classes of do-nothings—"those who want to perpetuate something which they know would be condemned under impartial investigation, and the timid souls who would rather not vote at all than vote right or wrong." An opportunity is close at hand for the Republican party to divide into the two classes named by Gov. Cummins. The treaty of reciprocity with Newfoundland has been signed and transmitted to the Senate for ratification. It is the act of the present Republican Administration. It is also a repetition or revival of the Blaine-Bond treaty negotiated by a former Republican Secretary of State. It admits to our ports, free of duty, salted fish, fish oil, sealskins, and the ores and metals of Newfoundland, in return for which our fishermen have certain privileges in the ports of Newfoundland, and the admission free of duty of a long list of American manufactures, with reduced duties on cereals and provisions. To this treaty it is said that the New England Senators are firmly opposed, because it puts on the free list salt codfish, which is a product of New England industry. Their attitude gives point to Gov. Cummins's speech, and we shall soon see whether

the whole Republican party is to divide on the lines which he drew so graphically at Detroit.

---

The lecture on Trusts delivered by Judge Grosscup of the United States Circuit Court, at the University of Nebraska, is noteworthy in two particulars. It is the opinion of a judge who has had a considerable amount of Trust litigation to deal with on the bench, and it is that the Sherman Anti-Trust Act is non-enforceable and ought to be repealed. Repeal of that act, he says, lies at the foundation of any effectual anti-Trust law. The reason why he thinks so is that it proceeds upon a false theory that the Trusts should be uprooted instead of regulated. So far are we from uprooting them that one hundred new Trusts have been created since the Sherman act went on the statute-book. This is certainly something like a demonstration of the futility of that act. Judge Grosscup would substitute in place of it one which would "provide against artificial prices, brought about either by a cornering of the supply or by conspiracy, and also against discrimination in prices as to either buyers or places. There should be provision for open books, for stated examinations by some department of the Government, and for periodical statements to the public, as in the case of the national banks and many of the railway companies. The new legislation should forbid the issue of primary stock in excess of the cash paid in, or the real value of property contributed, to make up the company's assets. Some department of the Government should be charged—as between the company and the public—with the duty to see that this limitation was enforced." This is a summary in brief of the Littlefield bill, and it cannot fail to strengthen that measure in the minds of Congressmen; but whether it will have the soothing influence which the Judge anticipates on the relations of labor and capital is more doubtful.

---

The meeting of the Civic Federation came to an end on December 10, and Chairman Hanna took occasion in the closing speech to praise the bituminous coal miners for standing by their contract and continuing work last summer, when they were asked to join the anthracite miners in a sympathetic strike. Mr. Hanna considered this a crucial test of the good faith of organized labor, and he congratulated the country on that notable event, but it is notorious that the success of the anthracite strike depended upon the bituminous miners keeping at work and contributing a certain percentage of their earnings to the strikers. This was made clear by President Mitchell's speech at the bituminous miners' convention at Indianapolis, July 17, which he concluded with a series of resolutions on the financial side of the question. These embraced an appropriation of $50,000 at once from the treasury of the United Mine Workers, an assessment of one dollar per week on all members of local unions, and an appeal to all trade-unions and the general public for financial assistance, which resolutions were wisely adopted. What would have been the consequences of a sympathetic strike in the bituminous mines at that time? Not only would the anthracite miners have been without bread, but the bituminous miners would soon have been in the same plight, and the other trade-unions, nine-tenths of which were dependent on coal for their respective industries, would have been disabled in like manner. Mr. Hanna, as a bituminous coal operator, would have been crippled also, and prevented from lending aid to the anthracite workers even if he had been disposed to do so. We do not underestimate Mr. Mitchell's service in preventing a large body of excited men from taking a step disastrous to themselves and to the public, but we think that we are now far enough removed from that event to clear our minds of cant.

---

We learn from Indianapolis that the members of Local Assembly 300, Knights of Labor, which is the labor organization of window-glass workers, has a rule limiting the total amount of glass which can be made in a month, and that the President of this Assembly, Mr. Burns, has either rescinded or relaxed it. The members have refused to obey Mr. Burns's order, and a new candidate for the presidency of the Assembly has taken the field against him, with every prospect of success. The reason for limiting the production of glass is to keep the price of the article up to the possible limit of the duty on imported glass under all circumstances. The duty is about 100 per cent. ad valorem; that is, the American consumer of window glass must pay two prices for every pane he buys. But this is not the whole story. From the *Knights of Labor Journal*, November issue, we learn not only that this fraud on the consumers has been accomplished, but that an outrage of equal magnitude has been perpetrated upon all the glass-blowers of the country who are not members of Local Assembly No. 300. These are only 2,400 in number. They do not allow anybody but themselves to engage in the trade except with their permission, and in no event without paying an initiation fee of several hundred dollars. So tyrannous and exasperating has this monopoly become that a bill is to be introduced in Congress, under the auspices of the Knights of Labor, to put window glass on the free list.

---

A copy of the bill is printed in the *Journal*. The argument advanced editorially in favor of it has a familiar sound to our readers. It affirms that no duty on window glass has been needed in this country for purposes of protection these many years. It says that the effect of the exorbitant duty has been to enable the manufacturers to become sluggards, to take things easy, and to lag behind other countries in the technicalities of the art. If they had made proper use of the opportunities which nature has thrown in their way, instead of relying upon the artificial supports of the tariff, they might have distanced competition in foreign trade and commanded the markets of the world. The tariff on window glass is computed by weight, according to sizes. If the glass be not more than ten by fifteen inches square, the duty is 1⅜ cents per pound, and it rises to 4⅜ cents per pound for sizes exceeding forty by sixty inches square. Common window glass of the ordinary sizes, worth $1.50 to $2 per box in a free market, costs the American consumer $3 to $4 per box, and the restrictions on the output in this country are such that an enlarged demand coming upon the market cannot be supplied. Consequently, there is an importation of 300,000 to 400,000 boxes per year which might be made at home if the shackles of the Trust were thrown off. And yet we are told that the tariff has very little connection with Trusts, and that any meddling with the duties will bring destruction upon the "small producer." Is there any smaller producer of glass than the compound window-glass Trust?

---

It was doubtless an agreeable duty which the National Civil Service Reform League performed at Philadelphia in giving to President Roosevelt the praise which is his due for the general excellence of his appointments to office, and for his enforcement and strengthening of the civil-service laws. The discomfiture of the spoilsmen at his hands, in the matter of the permanent census office, was a great stroke for reform, of which the full merit will be visible when the new order of things goes into effect on January 1. The resolutions adopted by the League on Friday call for further steps in advance, one of them being the long-delayed reform of our consular system. President Roosevelt's message endorsed the plan of bringing consular appointments and promotions under the merit system, and asked Congress to pass a law compelling it. The League favors such legislation, but also, adopting a suggestion of Mr. Schurz's, calls upon the President to put the new system in force by Executive order, if Congress refuses to act. That he has the Constitutional power to do so cannot be questioned. "The President shall appoint"; and he may, if he pleases, say that he shall appoint only those consuls who prove themselves best fitted by competitive examination. It is well enough to urge Congress to move first; but if

this particular reform fails, the responsibility will rest ultimately upon the President. He has the power to inaugurate it on his own motion. We hope to see him do it.

---

Postmaster-General Payne and Surveyor Clarkson are evidently having a lively time of it making sure that the Southern delegates do not get away from President Roosevelt. Both of these experienced political managers are reported to have been on the verge of desperation the other day, and to have averted a calamitous result only by prompt and vigorous means. It came about in connection with a North Carolina postmastership contest. Negro Republicans, in Washington to see about the appointment, were looking sullen over a report that the advice of Senator Simmons, a Democrat, had been asked by the President. Manager Payne saw that this would never do, so he engineered an "administrative intimation" that Senator Simmons's interference was regarded as an impertinence. This comforted the negroes, but drove Senator Simmons into fury. He prepared a typewritten speech, in which he was to "disclose" his relations with the Administration. But Manager Payne was equal to the occasion. He sent for Senator Pritchard and hurried him off to the Senate to stop the speech. Pritchard arrived and found his colleague, typewritten sheets in hand, ready for the onslaught, but was successful in making him die with all his music in him. Meanwhile, Surveyor Clarkson made a "flying trip" to Washington and "talked matters over" with the President. For the moment, everybody is breathing more easily; but it was a narrow escape.

---

All friends of good city government will rejoice that the retirement of Col. Partridge furnishes the Mayor an opportunity to have the Police Department thoroughly overhauled. The one explicit mandate of the voters at the last municipal election was that such a reform be had, by root-and-branch methods, if necessary. Now that the Department has been freed from a demonstrated failure, the field is clear for the selection of a new head who shall have the needed physical and mental vigor, the power to enforce rigid discipline, and the capacity to make himself a terror to evil-doers on and off the force. A Commissioner of Police of that type may yet retrieve the whole situation, and make the outlook for the continuance of a reform city government after next year entirely different. We confidently count upon Mayor Low's zeal in finding such a man. He simply must be found, and the work must be done. Everybody will be ready to let bygones be bygones, and heartily uphold the hands of the Administration if it only puts an edge on reform, and tireless energy into the rescue of the city from Tammany and all its ways.

---

A very estimable woman, high in the councils of the Woman's Christian Temperance Union, takes President Roosevelt to task for harboring in the White House Mr. George F. Watts's great picture, "Love and Life." The picture, it may be remembered, was given to the nation by Mr. Watts. At the time there was some anxiety as to the proper disposal of the gift. The picture is one of Watts's finest conceptions, and superior to most of his work in execution. The composition need hardly be recalled to our readers—Life, a frail woman's form steadied along a mountainous pathway by the sturdier figure of Love. Both are nude, and so best express the artist's high thought, which is that love sustains when otherwise the path of life were too difficult to be trod. This is what a normal person of no extraordinary discernment would see in Mr. Watts's beautiful allegory. We presume that this is what President Roosevelt, the temporary custodian of this work of art, sees in it. Of course, it is possible to see it in another light. To the well-intentioned woman who has assumed the charge of the President's artistic morals, it is: "A nude woman going up a cliff in a high wind." There is an appalling truthfulness in this description, and if "Love and Life" were no more than that, we might adopt the plan of that exceptionally chaste century, the seventeenth, which employed painters to clothe the glorious nudities of the Renaissance.

---

It is a very barren victory that the German Government has won in passing the tariff bill; in fact, many friends of the present order see in the bill itself, and in the manner in which it was forced through the Reichstag, the beginning of industrial distress and of political disorder. The Government has asked for "a weapon" against commercial rivals—a tariff schedule so high that all who trade with Germany must sue for concessions—and now it has a weapon with a vengeance. The tariff schedules, as amended out of all semblance to their original conditions by the Agrarians, are so excessive that the *Vossische Zeitung* questions seriously if they can ever be put into effect. Of course, the case of the Government was surrendered when the Chancellor, contrary to his own protestations, accepted a prohibitive duty on barley for malting purposes. He does well to refuse the hollow offer of a prince's title for his services in passing such a bill. He must realize that, at the cost of surrender, any bill can be passed. It is a high price the Government is paying for the Kaiser's canal and naval projects, and the Chancellor has no more reason to expect fidelity in his Agrarian allies for the future than he has found moderation in the past.

---

More unfortunate than the victory of the German squirearchy or the grotesque tariff bill itself, is the manner in which that measure has been passed. It will raise the price of food for every workman in the German mills, it will strike at the export trade which has made Germany a prosperous manufacturing nation, it will have a tendency to bring distress upon all those not engaged in agriculture. In view of these facts, the refusal to hear the minority—the representatives of the classes most likely to be injured by the bill—was wholly indefensible. The majority had, to be sure, the pretext of suppressing deliberate obstruction; but the pretext was a flimsy one. Violent obstruction by the Social Democrats was used only against the extraordinary proposal to pass the tariff bill *en bloc*, without debate of its separate sections. It was a measure of self-defence, and, in essence, less disorderly than the gag rule of the Agrarian-National-Liberal majority. The surrender of the Government to the Agrarians and its oppression of the Socialist and Radical minority seem an excessive price to pay for a very bad tariff. The ulterior effects of the whole incident can only be to increase class prejudice in Germany, and ultimately to strengthen the anti-dynastic parties.

---

What would have been one of the wonders of the world a century ago was completed on December 10, when the great dam of the Nile at Assuan was formally opened. Not only is it one of the greatest engineering feats of modern times, but it bids fair to be one of the most beneficent public works undertaken by any modern Government. Completed a year before the contract time, the actual construction of this great reservoir has taken but little more than four years. It makes navigation to Wady Halfa possible throughout the year by means of a canal around the cataract. But its main object is to prevent loss of the crops and a consequent famine by storing sufficient water to supply the irrigation canals, even when the Nile flood fails to bring down its rich silt to the tillers of the soil. More than that, the reservoir will make two crops a year possible, one in winter and one in summer, and this system of double crops is counted on to make Egypt in time one of the richest countries of the world, in proportion to its area and population. No work that England has done for the natives in any of its foreign possessions surpasses its achievements in Egypt. The excellence of its administration in the Nile country is, indeed, the one justification of its failure to keep its solemn pledge to evacuate the country.

*THE COERCION OF VENEZUELA.*

Anomalous and instructive features of the attempt of Germany and Great Britain to collect by force a few thousand dollars from Venezuela, crowd the daily dispatches. We have, in the first place, a revival of that sorry fiction of international law, the "pacific blockade." Neither England nor Germany has declared war against Venezuela. Their joint forces have simply committed acts of war while calling it peace. A blockade is of itself an act of war, and will surely result in war if the country against which it is directed is strong enough to resent it. Certainly, the capture and sinking of the public vessels of Venezuela is the deed of a belligerent, however stoutly he may protest his peaceful and even benevolent motives. The fact that there was an inevitably *bouffe* aspect about the seizure of the Venezuelan warships does not alter its essential nature. It is probably true that never before was an entire squadron captured by men in small boats; but it was a warlike act, despite its absurd appearance, and President Castro is quite right in asserting that England and Germany have made war upon him without declaration or notification.

The obvious truth is, that this whole notion of "pacific blockade" depends upon a denial of that fundamental postulate of international law, that all nations are legally equal and have the same rights. Military demonstrations and blockades are devices to overawe and coerce the weak. Ashamed to say that they have gone to war with so feeble a nation as Venezuela, the allied Powers engage in war, but call it peace. There have been, of course, many instances in which fleets of strong countries have blockaded the ports and coasts of the weak. Greece and Portugal in the Old World, Brazil and Mexico in the New, have been so blockaded. But the practice was specifically condemned by the Institut de Droit International in 1874, and is now generally admitted to be only an attempt to make an act of war smell sweeter by giving it another name. Woolsey puts the case tersely. When it is sought, he says, to add to the doctrine of an effective blockade and of a paper or cabinet blockade the doctrine of a pacific blockade, "we have this singular state of things offered to us: the nation injured and the neutrals declaring that there is war, the nation using the violence, that there is not. Surely a state of peace can never involve such contradictions."

That the Venezuelan authorities were fully justified in declaring that war had been levied against them is, therefore, unquestionable. International law as well as common sense has no patience with the pretence that hostilities can be labelled peaceful. But President Castro was himself guilty of a grave breach of the law of nations in seizing the persons of all British and German subjects upon whom he could lay his hands. This was to act as Napoleon did, but without Napoleon's ability to back up his decrees by force. On the strict theory of war, all subjects of the enemy would be regarded as liable to be treated as prisoners of war; but the practice and consent of civilized nations—that is, international law—admit of no such rigors. The severest treatment now allowed is to notify foreigners that they must leave the country within a given time. Accordingly, our Minister in Caracas, in whose hands German and British interests had been temporarily placed, was but doing his duty, and acting wholly within his rights, in going to President Castro to demand the instant release of the German and British civilians who had been arrested. Had not the demand been complied with, Venezuela would have had to be regarded as outside the pale of civilized nations.

The next step on the part of the allies was warlike enough. No one can read the account of the cannonading of the forts at Puerto Cabello—especially the correspondence and narration of the facts preliminary to it—without getting a very bad impression. In a situation which was, in any aspect of it, exceedingly delicate, the naval officers concerned acted like a pair of hot-heads dealing with Ashantees or Abyssinians. The action which they so impetuously resented was plainly the work of an irresponsible mob, and the proper official apology was actually on its way to them when they opened fire. It was an unfortunate business, in whatever way it be looked at, and illustrates again the perpetual hazard to which a Government exposes itself when it begins to dally with war. A hare-brained officer may at any moment throw his lighted cigar into the magazine. Then, of course, comes the cry which the German press is already raising—that the national "honor" is involved, and that it is not possible either to disavow the rash act of a subordinate or to retreat from a false position. So true is it still, as it was in Burke's time, that a mistaken sense of "dignity" may drive a nation forward to "wound itself by the use of its own weapons."

The whole affair, it is clear, has not come off according to the expectation of the Foreign Offices in London and Berlin. Venezuela has not collapsed at a show of force. It may even be that President Castro hails this foreign attack as the best means of uniting the factions which have been so long desolating the land with civil war. He has got what Seward wanted Lincoln to try for early in 1861—a foreign war as the sure guarantee against domestic strife. We may see the Venezuelans of both parties fly to arms against the foreign invader, as Guelf and Ghibelline left off their murderous quarrels when a common enemy was at the gate. It is even possible that the high-strung and reckless Venezuelans will carry out their threat of abandoning their ports, tearing up their railways, seizing the mountain-passes that guard the capital, and compelling the Anglo-German forces to dispatch a military expedition. However this may be, we have already seen a demonstration of one of the fallacies by which great armaments are often defended. It is that if you make yourself formidable, you will never really have to go to war, since a weaker nation will tremble at your lightest threat. But the attempted coercion of Venezuela has already shown, what the Boers had before written with their blood, that there is such a thing as an impetuous patriotism which recks not of odds.

So far as this country is concerned, the rôle of an interested but calm observer is clearly the one for us to maintain. If German and British officers on the spot lose their heads, all the more reason for us to keep ours, and to keep them clear of cobwebs. In the mere matter of trade advantage, we can afford to contemplate with entire equanimity the boycott on English and German goods now in full blast in Venezuela. This is likely to spread to adjoining South American republics, and to be a handicap on the commerce of our principal competitors in those parts for a long time to come. It is one of the ugly consequences of the bellicose attempts to uphold German "interests," which has already been pointed out with much force by the newspaper organ of the German Socialists, the *Vorwärts*. A military expedition to collect a debt and to extend trade is about the most wasteful and fruitless expedient known to man. One shell may undo the work of fifty commercial travellers.

In the larger political and international aspect of the Venezuelan affair, it cannot be denied that there is reason for some anxiety at Washington. Our peculiar relation to warlike occurrences in this hemisphere makes it incumbent upon the Administration to proceed with great caution. We have no reason to doubt that the Administration has made the sole application of the Monroe Doctrine which the Venezuelan premises call for. This is, that no permanent occupation of American territory be contemplated. It is understood that our Government has already given and received stipulations to that effect. The assurances of the German and English Foreign Offices on that subject have been semi-officially published. We think it would serve a useful purpose in allaying any possible excitement in Congress and throughout the country, if Secretary Hay were to make an official statement, clearing up all doubts that remain in any mind. Let the point be made plain. All that we are pledged to withstand is territorial acquisitions in this hemisphere

by European Powers. Such we have notified them that they must not make. On that ground alone does the United States take its stand. We may think what we please of the justice or injustice of the claims made on Venezuela. The Monroe Doctrine is silent on that subject. We may feel as deeply as we are compelled to about the lack of tact and consideration which the allied squadrons have displayed. The Monroe Doctrine cannot be invoked against bad manners or brutality. As long as we have guarantees that no permanent occupation of American territory is intended, we can afford to keep perfectly cool about what is going on in Venezuelan waters. Whatever we may privately think about the magnanimity and heroism of it, we are not called upon to change our public attitude of discreet and neutral watchfulness. By adhering firmly to the course already marked out, the Administration should be able to count upon the support of Congress and the country.

### *"GOOD" TRUSTS AND "BAD."*

Mr. Carnegie comes home full of approval for the President's plan of dealing with the Trusts on a moral basis. He is delighted at the thought of Mr. Roosevelt taking the "bad" Trusts on his grandmotherly lap for a public chastisement, while giving the "good" ones lollypops. In this, Mr. Carnegie is at one with Mr. James J. Hill of the Northern Securities Company. That gentleman is quoted in the Chicago *Record-Herald* as gravely endorsing President Roosevelt's "remedy for what are called Trusts." That remedy is "all right," affirmed the President of the Great Northern Railway Company, without a wink—or at least without one visible to the reporter—"assuming that you want to encourage what is good and prevent what is bad."

President Roosevelt's proposals in this line are eminently characteristic. His natural bent is towards moralizing. The late Speaker Reed, with his best air of preternatural innocence, used to speak of Mr. Roosevelt as "our greatest living thinker." He might well have called him our greatest moralist. No one could show more concern about other people's morals than the President does. He has more than his share of Anglo-Saxon "earnestness"—which Walter Bagehot defined as the impulse to go out and take your fellows by the throat in order to compel them to think and act just as you do. Corporations may have no souls, but Trusts have a moral nature, Mr. Roosevelt is certain; and it is his burning desire to "draw the line at conduct" in dealing with them. Conduct may be only three-fourths of life, but it is the whole of Trusts, as the President sees them.

We regret to observe, however, a ribald spirit manifesting itself in the Western press on the subject of Mr. Roosevelt's moral discriminations in the matter of Trusts. The irreverent newspaper cartoonist pictures the President taking the moral pulse of the various monopolies from which the people suffer, and awarding a halo to each one that can assume, for the nonce, a saintly expression. It is pointed out, too, that the moral quality of Trusts will necessarily vary with their politics. The Chairman of the Republican National Committee, for example, could not fail to certify to the virtues of Trusts that had made the proper contributions. Who is to be the examiner in Trust morals? What is to be the test of goodness? Shall we ask whether the Trusts pay good wages, are regular in church attendance, and are kind to their families?

Such questions sound ludicrous, but they are not more ludicrous than is the whole attempt to settle a question of law, of public policy, by irrelevant distinctions of good and bad. If the Trusts are founded upon a dangerous principle, if they operate by methods repugnant to our traditions of equity and of law, then they are all bad. If, on the contrary, their foundation is legal and their methods equitable, they are all good, in the only sense that the legislator can take cognizance of the goodness of a public institution, and should be let alone. To try to mark off the "good" Trusts from the "bad," when once you have conceded that their principle is wrong, is like talking of good and bad tyranny, good and bad oppression, good and bad slavery. We cannot legislate upon what is passing in the mind of a man, nor can we know what is passing in the mind of a Trust. All that we can ask is, "Are you violating the statute law? Do your operations contravene the prohibition of monopoly in the Common Law? Is there need of new enactments to head off your cunning in getting around old laws?" Only such questions have point, in the premises. By the answers to them alone can legislation be guided. The politician may run off on some such personal issue as will lead him to say of a given Trust, in the words of a song of the day, "It certainly was good to me"; but the statesman can look only to legal principles and legislative remedies of universal application.

For a contrast between moral fumbling with Trusts and a clear-cut description of evils to be cut out by law, one has only to turn from the President's ineffective lecture on good and bad Trusts to Attorney-General Knox's speech at Pittsburgh on October 14. In trenchant language he described the abuses committed by Trusts in violation of "the rights or recorded will of the people." These are: "over-capitalization, lack of publicity, discrimination in prices to destroy competition, insufficient personal responsibility of officers and directors, tendency to monopoly, and lack of appreciation of their relations to the people." There you have definite specifications. Mr. Knox did not stick in the bark of doubts whether, after all, some Trusts guilty of such abuses might not be "good," though some were "bad," but went as lawyer and statesman swiftly to the point of declaring that all combinations involving such, or any such, illegalities and frauds upon the public, were of a sort which the Government should "endeavor to destroy." That sounded as if it meant business. Mr. Roosevelt's delicate splitting of moral hairs 'twixt north and northwest side is, in comparison, painfully hesitant and irrelevant.

There is talk of amending the Sherman Anti-Trust Law at this session of Congress. If the thing were to be done in accordance with President Roosevelt's notion of being good to good Trusts, the first section of the amended law would read about as follows:

> "Every contract entered into for bad purposes, combination of bad men in the form of harmful Trust or otherwise, or reprehensible conspiracy in improper restraint of wholesome trade or useful commerce between the several States or foreign nations, is hereby declared to be illegal if its conduct be bad. Every person, unless he is good, who shall make any such bad contract or engage in any such improper combination or undesirable conspiracy shall be deemed guilty of a misdemeanor unless it appears that his motives were excellent, etc."

That is what we come to when we "draw the line at conduct" in drafting laws.

### *CHANGES IN CITY LAND VALUES.*

There can be no doubt that the present is a period of unparalleled speculation in New York real estate. The prices now being paid in Manhattan are wholly unexampled. Lively speculation was a feature when Tweed was laying his boulevards and indulging in lavish improvements on the neglected West Side, but that was chiefly in unimproved property, and was not unlike the familiar booms in mushroom Western towns. There was much stir, too, when the actual development of this great section and of Harlem began, some twenty years ago; but the building then was mainly of low-priced dwelling houses and of cheap flats. It was a speculation in thousands, while the present is a speculation in millions. To-day we have a $60,000,000 realty corporation with Steel Trust alliances.

The explanation is to be found in the general use of structural steel in building; in the growing wealth of the nation; in the increasing importance of New York city as its financial, industrial, and residential capital; and in the great public improvements—rapid transit, the new East River bridges, the proposed East and North River tunnels, and the Pennsylvania terminal—now under way or projected. The American sys-

tem of steel construction has resulted in building eighteen, twenty, and twenty-five stories high, and, as a consequence, the earning power of the land has doubled and trebled in twenty years. And this new method in building has been coincident with vast accumulations of wealth, and with its tendency to establish itself in New York. Thus nearly all the recent great combinations of capital have moved their headquarters to this city, and become large users of office space. With them has come a good-sized army of millionaires, which, in its demand for residential property in the most popular districts, has raised land values to a height never attained before. It is significant that nearly all the Steel Trust "magnates" are either building expensive houses in the best locations or are recent purchasers of them. Values in the Fifth Avenue district have increased anywhere from 100 to 400 per cent.—that is, lots which four years ago could have been purchased for $25,000, have been readily sold at $100,000. Fifth Avenue property, indeed, in the last four years, has practically ceased to be real estate. It is rather expensive bric-à-brac, restricted in quantity and greatly desired by a class of purchasers whose yearning for it is based not upon its earning power, but upon the personal satisfaction which its possession assures. The influence of the new tunnels and bridges in enhancing values, while not so picturesque, is still effective. Those parts of Washington Heights which will be made accessible by the subway have doubled in value since the beginning of that public work. The best of this property is now in the hands of powerful syndicates, which anticipate large profits when the building season arrives.

The existing real-estate speculation in New York has a tangible basis; it is, to a great extent, the result of an actual public demand. The expansion of the city which accompanies it is an evidence that it is no gaudy bubble, soon to be pricked. The growth of New York city is one of the most remarkable social and economic phenomena of the time. The boast of the Roman Emperor that he found the city brick and left it marble, is in a fair way to be outdone by the present generation of builders, who found Manhattan Island wood and stone and have left it steel. Not only have the long-established business districts been transformed, but a flourishing office section has been created in Wall Street east of Pearl, and the malodorous rookeries about Battery Park have been replaced by the present piles of marble and granite. Upon Fifth Avenue, from Fourteenth Street to Twenty-third, the old brownstone houses of a former age have been supplanted by eighteen and twenty-story commercial buildings. In a single year the junction of Broadway, Sixth Avenue, and Thirty-fourth Street has been transformed into a great retail centre. Thirty-fourth Street itself, once the residence of many of our most substantial citizens, is rapidly becoming a great business thoroughfare.

The increase in values in this section is strikingly shown by the fact that the Stewart mansion, which is probably the most commanding Fifth Avenue corner in the mercantile section, sold in 1899 for $63 a square foot, while only the other day an inconspicuous inside lot on the north side of Thirty-fourth Street was sold at the rate of $65. The greatest change, however, is to be seen still further north, at the junction of Broadway with Seventh Avenue at Forty-third Street. Less than four years ago, this was one of the least attractive places in town. Recently, however, a corner lot which, in 1895, was bought for $135,000, was sold for $200,000. Upon Longacre Square itself two great Astor hotels are now under construction; in the same general district, six new theatres are being built—and sites for two additional ones have been recently purchased. This section, indeed, is the coming Vanity Fair of New York; at least forty hotels of the apartment type were built there last year, and plans for twenty have been filed since the first of this year. The sudden discovery of the usefulness of the property for this purpose has precipitated a lively scramble among speculators for it; and houses which four years ago were freely offered for $15,000, now find ready purchasers at from $30,000 to $40,000. In connection with Fifth Avenue prices, it is an interesting fact that the fashionable district has been extended as far north as Ninety-first Street. Up to a year ago fashion, in its occupancy of the side streets, stopped at Park Avenue. In the last few months, however, there has been a migration as far east as Lexington; and here, too, prices have gone up 50 and 100 per cent.

The present is thus an *annus mirabilis* in the development of New York city. Yet the increase in property values has not been general; whole areas of the city have not participated in it; in others, such as the old wholesale district, values have actually gone down. It is on account of these sudden fluctuations, and the lack of uniformity in the recent rise in values, to say nothing of the fact that a certain element in present "market valuation" is inflation, that the experiment of the Tax Department in assessing real estate at its actual value is regarded with such apprehension by property interests.

## *A NEW BATTLE OF THE BOOKS.*

The controversy now on foot between the great advocate, Sir Edward Clarke, and the engaging critic, Edmund Gosse, is a very pretty quarrel. The opponents —Sir Edward as devil's advocate of modern literature, Mr. Gosse as its apologist—have each given open grounds of offence, and have crossed blades sharply. In this respect it resembles the learned duels of an older time, and not the mere scuffling methods of modern literary fence. Sir Edward Clarke has been lecturing to workingmen on "The Decay of English Literature." He has said on one occasion: "To-day we have no great novelist. Will any one suggest we have a poet? There has been no book produced in the last ten years which could compete with any one of the books produced from 1850 to 1860." Mr. Gosse took up the challenge at the dinner of the contributors to the supplementary volumes of the 'Encyclopædia Britannica.' Responding to the toast of "Literature" and evidently alluding to Sir Edward Clarke, he maintained that the aphorism "Ne sutor" applied to eminent advocates, warned his hearers against uncharitable judgment, cited in illustration "the insensibility of Montaigne to the merits of all his contemporaries," and sat down amid the cheers of all the modern littérateurs present. So much for the beginning of the strife.

Sir Edward Clarke's *riposte* was shrewd, if delivered somewhat athwart the line of fence. He showed that the alleged "insensibility" of Montaigne to contemporary merit was a sheer post-prandial improvisation of Mr. Gosse's. Montaigne had, in fact, praised Du Bellay and Ronsard at their best as "little inferior to the ancient perfection." This very palpable hit, however, touches Mr. Gosse's illustration, not his main contention; and his question, "Is this a time of intellectual destitution or prosperity?" still awaits its definitive answer. It is more than an academic question, for upon its answer depends the prevailing tone of literary opinion, and in some sense the fame and fortune of writers of to-day. If a large body of discriminating readers are fully convinced that it is an age of literary bankruptcy, they will generally refuse to accept current notes of hand, and will draw upon the reserve of the classics. If, on the contrary, there is a general conviction that times are propitious, the chances of rising genius are greatly improved. No great work, we believe, has been written upon a theory of literary destitution.

Besides the difficulty of distinguishing a real from a false prosperity—genuine merit from genius proclaimed in three inks, and represented by statistics of advance sales—there is the greater difficulty of imagining Mr. A. the delightful novelist, Mr. B. the genial essayist, and Mr. C. the passionate poet in the light of posterity. How shall one affirm with any positiveness that Mr. Gosse, who writes so charmingly on so many subjects, and talks so acceptably at so many dinners, will a generation from now be

as famous as Saint-Beuve or as forgotten as, say, our own very estimable Whipple? Everywhere this difficulty confronts us. We are asked to tell in advance whether Mr. James is to be invited to join Thackeray's company, or whether he is doomed to unwilling and incongruous fellowship with his namesake of the many initials and "the solitary horseman." We are required to decide whether Mr. Howells is fit to drink celestial tea with Jane Austen and Maria Edgeworth, or whether his consorting shall be lower—with Mrs. Oliphant, for example. From such hazardous prophecy Mr. Gosse dissuades us, urging us ever to cherish the hope that we are entertaining angels unawares, while not requiring demonstrative proof of angelic qualifications.

This is very amiable doctrine, but was it not Mr. Gosse himself who gave us the phrase "an age of great funerals"? It is hard to resist the conviction that the last years of the nineteenth century will be remembered rather because they witnessed the last work of Browning, Tennyson, and Stevenson than because they saw the beginnings of the prominent novelists and poets of the present generation. The most fervent admirers of Mr. Kipling or Mr. Hewlett, of Mr. Watson, Mr. Stephen Phillips, or our own Mr. Moody, may fairly doubt that they will ever bulk with Thackeray or Tennyson, or even with Longfellow or Charles Reade. And yet it would be absurd to speak of our age as one of intellectual destitution simply because the vast increase in the number of raw readers ready to turn raw writers somewhat obscures the literary prospect. Among both writers and readers there is more training than there ever was, and among many of the younger men a high, nay, almost an excessive, conscientiousness. What the future critics of our day will probably note, when time has swept away the chaff, is a surprisingly high level of mere execution, accompanying a rather low average of vitality.

The spacious times of literature are, after all, rare. It is something to have lived in the dying glory of the generation that knew Thackeray and Balzac, and saw the beginnings of George Meredith, Tolstoy, Ibsen, Maupassant. The literature of our time is just occasion neither for the gibes of Sir Edward Clarke nor for the unfaltering faith of Mr. Edmund Gosse. The new battle of the books is likely to end, like many a tourney, with no champion declared, but with the spectators duly edified by proclamation of a fair fight, and entertained by the sight of cold steel shown generously if innocuously.

## THE CONSTITUTIONAL ASPECTS OF MR. CHAMBERLAIN'S JOURNEY.

LONDON, November 29, 1902.

The Constitution of England, as we have all learned, has "not been made, but has grown," and this formula, if properly understood, contains in a popular and inaccurate form a great deal of important truth. The exercise by the King of his prerogatives; his relation in matters of law-making to the two Houses of Parliament; the rule, which is thoroughly well understood, though indefinite, that when there is a permanent disagreement between the House of Lords and the House of Commons, the Peers must at some point, not very precisely fixed, give way to the so-called Lower House; the very existence of the Cabinet and the extent and nature of its powers, and a lot more of practices or rules which in the aggregate make up the modern Constitution of England—are not to be found in any statute, but have developed or have grown under the stress of circumstances, and in deference to the real or supposed requirements of a given time or emergency. But though we all repeat, without much consideration of its bearing on the public life of England, the doctrine that the Constitution is a sort of natural growth, and originates rather in custom than in parliamentary enactments, few of us, unless we happen to have given special attention to Constitutional history, draw the necessary inference that, if the Constitution is a thing that grows, we ought to watch any new Constitutional practice with at least as much care as citizens of the United States would, I presume, weigh the character and probable effect of a proposed Constitutional amendment.

This reflection, obvious enough in itself, has been forced upon my attention by Mr. Chamberlain's voyage, which has now begun, to the Cape. The beneficial effects which that journey may, as we hope, produce; the possibility of Mr. Chamberlain's wished-for success in fostering friendship both between Englishmen and Boers and between England and her loyal colonists; the risk that his efforts at conciliation may fail; the confidence placed by the nation in the patriotism and the wisdom of the Colonial Secretary; the boldness of the new course of action which Mr. Chamberlain has struck out for himself—these are the sort of matters which have filled the columns of our newspapers and the speeches of our statesmen. As, in short, is natural and perhaps inevitable in the transactions of public life, everything which is personal and temporary has excited interest. What no one, or scarcely any one, has noticed, is that the course pursued by Mr. Chamberlain, and by the Cabinet of which he is a member, will in reality (especially if the novel experiment in colonial government which he is conducting be crowned with success) introduce, or tend to introduce, what is nearly equivalent to a constitutional change in the relation between the United Kingdom and the self-governing colonies.

To prevent all misunderstanding, let me add that I do not write as an assailant of the course pursued by Mr. Chamberlain and his colleagues. My hope is that his visit to South Africa may be productive of benefit to England and South Africa alike; and my observation of politics has led me also to perceive that actions which appear of great importance may also, without any blame being due to any statesman, produce, after all, little effect of any kind. My aim in this letter is simply to note two circumstances: The one is, that Mr. Chamberlain's action is novel; the other is, that his action, if successful, must produce, or at any rate must tend to produce, some marked effects on English constitutionalism.

Mr. Chamberlain's visit to South Africa is, from a constitutional point of view, a novelty. He does not go out to the Cape as a statesman who, out of office, wishes to study on the spot, with perfect freedom and without any responsibility, some difficult problems of colonial government. Mr. Chamberlain, again, is not a high commissioner, who goes out to govern a colony, and, like Lord Durham in 1838, is intended to examine the situation and possibly take energetic steps to meet the difficulties of a supreme crisis. Mr. Chamberlain goes out to South Africa as a member, and nearly, if not absolutely, the most important member, of the Cabinet. His journey is little less than the attempt of the Government of England to examine, so to speak, with its own eyes, the condition of South Africa, and in full sympathy, as we all believe, with Lord Milner, the High Commissioner, to take or advise such steps as in their judgment the condition of affairs may require. How great is the novelty, and how wide-reaching may be the import of Mr. Chamberlain's visit, will be seen by any one who considers how difficult it would be for the Government to refuse to pursue any policy urged upon their acceptance by the combined authority of Lord Milner and Mr. Chamberlain. For bad or good, we have before us a precedent set for the more or less direct intervention of the English Cabinet in the solution of the problems presented by colonial government; and among Englishmen, either at home or in the colonies, nothing has so much weight as precedent.

Mr. Chamberlain's voyage to South Africa must, especially if it attains its object, produce far-reaching effects. The simple truth is, that his journey is the open and visible sign of the conviction which is obtaining daily a greater hold on the people of England, that the tie which binds England to her colonies must somehow be drawn closer, and that the English Government must take a more active part in matters of colonial interest. Consider first the possible, though one is happy to think by no means certain, difficulties which may result from this new departure. A powerful member of the Government, who may well be within the next ten years a prime minister, appears in a colony and applies himself to the solution of the political problems which this distant land presents. But wherever there is a problem, there will also exist infinite differences of opinion as to the way in which it should be solved; and wherever, under our English system of government, there exist differences of political opinion, there must also exist marked divisions between parties. No man can please every one; no man of Mr. Chamberlain's capacity and force of character will try to please every one. However impartial his inquiries, however sagacious his judgment, he must almost of necessity offend not only individuals, but some strong party in South Africa. This is inevitable, but the direct intervention of the British Government must, turn the matter as you will, bring on the Government at home, and in a certain sense on the people of England, a direct responsibility which they have not hitherto borne

for the policy pursued with regard to South Africa.

Then, again, what are to be the relations between the High Commissioner and the Colonial Secretary? The one has experience, the other has authority. It would be hard to find two men more likely to agree than Lord Milner and Mr. Chamberlain; still, they are both strong men, with firm convictions and strong wills. Is it certain that they will in all important matters see eye to eye? And if this unity of policy between two men who might disagree is attained in the particular instance, what is the chance that any minister who at a future time imitates Mr. Chamberlain will find it possible to agree fully with the policy of a Colonial Governor which he must certainly intend to examine (and examination, be it noted, always involves the possibility of criticism or of censure)? What, to raise another question, is to be the relation between the member of the Cabinet who has gone out to a distant colony in order to form a fair estimate of the state of affairs there, and the colleagues who have stayed at home? Surely, it is all but certain that the policy he on his return advocates must be their policy. But if this be so, the emissary sent out to South Africa, to Canada, or to Australia attains on a particular matter a kind of authority which has hitherto been supposed to belong, if to any one member of the Cabinet, then to the Prime Minister. These questions, or difficulties, which might easily be multiplied, may all be brought under the following observation: A new departure must, from the nature of things, involve some and perhaps many new perils; the policy of *laissez-faire* has its evils, not at the present day likely to be underrated, but you cannot by any possibility combine the advantages of *laissez-faire* with the advantages of active interposition. The easiness of England's relation with her self-governing colonies has to a great extent arisen from the fact that England has for many purposes not governed them at all. It may well be the case that the time for this leave-alone system has come to an end. So be it, but let no man suppose that one can in public, any more than in private life, reap the advantages both of interference and of non-interference.

Let us look now with equal impartiality on the possible, and I hope probable, gains of a bold political adventure. Its first merit is that it acknowledges plain facts which we have all been too apt to ignore. The whole course of the world's history, and, above all, the effect of scientific inventions which have drawn distant countries nearer to one another, makes it impossible for England and her colonies to stand as far apart from each other as they did fifty years ago. Imperialism, whatever may be its defects, is the result of causes so potent and real that it is vain to hope that nations can escape from their influence. Then, again, close personal intercourse between English statesmen and their colonial brethren, if it does not remove all the difficulties with which a colonial policy is beset, and may even increase some of them, must diminish the force of a feeling which may clearly do great harm, that the people of the United Kingdom are indifferent to the distant parts of the British Empire and care little for colonial opinion. And, after all, ignorance is never in reality anything else but a danger; and everything which dispels our statesman's ignorance of colonial life adds strength to the whole empire.

Mr. Chamberlain's journey, and the policy which it embodies, possess a recommendation of which it is not easy to convey the importance to any man not accustomed to reflect on the development of the English Constitution. This recommendation is, that action which may be far-reaching in its results does not involve any formal change in the fabric of our polity. Whoever has for the last ten or fifteen years noted the growth of the belief that England and her colonies ought to draw closer to one another, must have long ago perceived that this end could be achieved by one of two methods. The one method is to remodel the constitution of the empire, as, for example, by admitting to the Parliament at Westminster an appreciable body of members returned by and from the self-governing colonies. Now the one thing that is certain about such schemes is that, while they may easily fail of attaining their end, they are most assuredly full of risk. The other method is to avoid, at any rate for the time, all formal alteration in the constitution of the empire, but to meet the new wants of a new age by new practices in the art of government. The aid asked from and given by the colonies in the way of troops is one example of this policy. Mr. Chamberlain's journey to South Africa is another. This method is not showy, it does not effect at once any tremendous change; but it is, on the whole, safe. If one experiment fails, another experiment can be tried. Mr. Chamberlain's journey represents the sound kind of experimental and gradual innovation which has always, in the long run, been found in England to be the most effective, as it is the safest, mode of amending the Constitution.

AN OBSERVER.

# Correspondence.

## A FAIR FIELD FOR BLACK AMERICANS.

TO THE EDITOR OF THE NATION:

SIR: In your last issue you cited from President Roosevelt's letter certain opinions of his touching the negro race. He says: "I cannot consent . . . that the door of hope is to be shut upon any man merely upon the ground of race or color." "If . . . the great bulk of the colored people are not yet fit . . . to hold such positions, it is worth while putting a premium upon the effort among them to achieve the character and standing which will fit them." To this you say, "We know of no answer except the hoary Southern interrogatory," etc.

With the permission of the *Nation* I will suggest answers to both assertions.

Purged of metaphorical ambiguity, the first implies that the difference of race does not connote any considerable mental or moral differences. To this I might reply by asking Mr. Roosevelt if he is willing to throw open American citizenship to the Chinese. But this would be an argument *ad hominem*, and he would know better than to answer it. My reply, therefore, is, that the South has known the negro race for three hundred years, and the world has known it for several thousand, and the universal experience has been that the negro is an undeveloped creature, with the physical powers of a man and the intellectual and moral faculties of a child. If Mr. Roosevelt knows better, the burden of proof is on him. Whether the negro will ever, in the process of the ages, reach a higher plane, is known to his Creator alone; we must deal with him as he is.

To the second assertion I answer by a question: Will the offer of a half-dozen small political offices (and certain other baits which need not be mentioned) help the negro to "achieve character"? If we may judge from the past, have they been achieving character since their emancipation? The criminal statistics of the last census are not accessible to me; but the census of 1890 shows that during the previous decade the proportionate criminality among the negroes increased 33 per cent.; that, in proportion to their numbers, the educated negroes were more criminal than the illiterate; and that, proportionately, their rate of criminality was higher in the Northern than in the Southern States. Do not these facts suggest that in helping them to achieve character we have somehow gone the wrong way about it?

W. H. B.

[We will content ourselves with saying that a single example of perfectibility in a black man, in character or in talent, is a sufficient answer to all oppressive generalizations about the natural inferiority of the negro. At this moment, the most conspicuous Southerner in the eyes of the world is a colored man, an ex-slave, an educator, whose autobiography is being translated into other languages. At the same time, the most familiar gauge of Southern white civilization to all foreigners is the awful growth of lynching since the time when cruelty was the daily privilege, if not pastime, of every member of the "superior" race.—ED. NATION.]

## A REMEDY FOR LYNCHING.

TO THE EDITOR OF THE NATION:

SIR: In your recent admirable comment on an attempt at lynching in Alabama you say, "Nothing except the administration of law and the punishment of lynchers by death or long terms of imprisonment will ever put an end to the practice of lynching." While this may be true, it is susceptible of some qualification. It is one of the truisms of experience that no law is ever enforced except at the behest of public sentiment, and I know of no way in which a sentiment against lynching can be created except by education. Such an education must obviously include the antipodes of the sentiment that breeds this crime. An analysis would undoubtedly show that lynching is born of a lack of the respect for law—which is the outward expression of the sense of justice—and an absence of kindliness. In other words, lynching is the fruit of injustice and cruelty.

Now it happens that there is a kind of education that seeks to eradicate in the human heart these very elements. Of late years school teachers have seen a great light. Many of them are now utilizing as object-lessons in the teaching of justice and kindness our brothers of the air and of the field. Most children have what may be called an instinct for pets, which is ca-

pable of being easily stimulated and trained towards sympathy for all animal life. There is no better way of impressing upon a young mind the rights of man than by beginning with lessons in the rights of animals. And the spark of affection for a dog or a cat can readily be fanned into a flame of love towards mankind.

Humane education, as it is called, furnishes the indirect and perhaps tedious, but certain, solution for this hideous crime. The superintendent of the Detectives' Association of America furnishes the following testimony: "Within twenty-five years' experience as an officer, I know of but very few criminals who were taught to love animals, and, searching for the cause of crime, we find that the lack of humane education is the principal one." Is it possible for a man who in boyhood has been trained in the principles of justice to every living creature, to violate the constitutional right of trial by jury and the natural right to live? It is inconceivable that one in whom has been developed a tender regard for a lame horse or an injured dog should burn a human being at the stake.

Yours truly, S. R. TABER.

LAKE FOREST, ILLINOIS, December 12, 1902.

## AN OHIO DECISION.

TO THE EDITOR OF THE NATION:

SIR: I enclose herewith a decision by an Ohio Circuit Court (an intermediate court), and also a syllabus by the Supreme Court of Ohio reversing the judgment of the Circuit Court. It strikes me that the decision of the Supreme Court lacks moral perception and that it deserves public comment. I was not in the slightest degree interested in the case except as a citizen.

We have a statute in Ohio which prevents building of street railways along the public streets without the written consents of the owners of 51 per cent. of the property abutting on the street. The Supreme Court expressly states that "such consents are not property rights, but rights in their nature personal to each owner of an abutting lot." And then again, "Such personal rights were bestowed by the General Assembly on owners of abutting lots as a check upon the power of municipal authorities to authorize street railroads to be constructed and operated against the wishes of the owners of lots on such street." The Court then holds that there is no public policy which prevents the purchase of such consents. It is this conclusion that seems to me to be contrary to public morality.

The Legislature assumes, and it is a fact perfectly apparent, that a street railway built along a certain street may be an annoyance and an injury to the people who own property on the street, and it was the purpose to prevent such annoyance and injury and to let the owners of the property be the judges as to whether the construction of the railway would injure them. This legislation is a sort of "referendum" such as the requirements that prevail in some States that, in order to establish a livery stable or a saloon, the consents of the property-owners in the neighborhood shall be first obtained. It bears a close resemblance to the local-option laws that prevail in many States, and the reference of certain matters of taxation, issuing of bonds, street improvements, etc., to the people who are to be affected thereby. Is it not the plain intent in all such cases that the judgment of the people who are to decide the matter shall not be influenced by corrupt motives? Does public policy permit a street-railway company to inflict a damage upon the owners of 49 per cent. of the property upon a street by the purchase of the consents from the other people who own property upon the street?

It might be the honest judgment of the people in a neighborhood that a saloon or a livery stable should not be established on a fine residence square, yet the owners of vacant property upon the opposite side of the street, or within the district to which the question is referred, might be bought to give their consent. Did the Legislature, in enacting such laws, intend that such things might be? Public policy is based upon morality. T. H.

CINCINNATI, December 10, 1902.

## THE DUTY ON BOOKS.

TO THE EDITOR OF THE NATION:

SIR: If Congress begins to lessen the surplus in the Treasury by cutting off sources of revenue, or if a "scientific tariff revision" takes place, the duty on books printed in England might be spared without loss to infant industries. The following is an example of the present working—not an isolated case, as I, and doubtless many others, can testify. As a member of the British Congress of Tuberculosis, the printed transactions of the Congress were recently sent to me. I do not know the market price of the four small volumes, but, as they are given to each member who paid the fee of five dollars, it is not likely to exceed this amount. The customs charges were $2.50, with sixty cents more for "warehouse." An examiner once remarked to me, when putting me through the Custom-house, that it was "no sanitarium." This recent experience makes me think he was right.

Very truly yours, GEORGE DOCK.

ANN ARBOR, MICH., December 10, 1902.

## FOOTBALL ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: The Springfield *Republican* and the Baltimore *Sun* have published what seemed to be authentic lists of the names of young men who have been killed, and of those who have been maimed for life, on the football fields since September 10. The killed number twelve, the maimed about seventy. I do not know personally of any of the recorded deaths, but I know two instances of injuries that will last for life, only one of which is mentioned in the lists I have seen published. It is quite certain that there are some instances of serious injury which are not generally known beyond the region in which they have occurred. According to reports, four of those who were killed met death on Thanksgiving Day.

Now is it unreasonable to ask college authorities whether they cannot abolish this brutal game, or at least so modify it that it may seem less like prize-fights, and may spare modern civilization the reproach of gladiator shows? One cannot but think that leaders of thought—the men in our colleges—have unconsciously allowed themselves to drift into an approval of a form of brutishness from which they must recover upon sober thought. Let them consider twelve young lives put out, and for what? And let them consider, further, that this record of brutality is exhibited under the auspices of institutions to which we have a right to look for refining and uplifting ideals.—Very respectfully, MEDIUS.

December 5, 1902.

[In an address delivered a year ago before the Southern Educational Association at Columbia, South Carolina, but only just published, Prof. Walter Leconte Stevens of Washington and Lee University cited statistics for the football season then just ended, summing up "at least seven deaths due to football in the United States, and over seventy recorded injuries so severe as to require surgical treatment, with a large number unrecorded." Within sight of Professor Stevens's home there had been "two concussions of the brain requiring hospital treatment." The fatalities, it would seem, have nearly doubled in the twelvemonth. Professor Stevens appends some thoughtful remarks on the responsibility of college authorities and in deprecation of intercollegiate contests. How to attain localization is indicated by the rubrics—"Gymnastics a requisite for a college degree," "Athletics should stimulate gymnastics," "Athletic privileges as rewards for good college work."—ED. NATION.]

## THE MUSEUM OF SAINT GERMAIN.

TO THE EDITOR OF THE NATION:

SIR: Please allow me to correct an error in Mr. Stickney's letter on the Museum of St. Germain, which you published in your No. 1951 (p. 398). The old chapel of our Museum, where St. Louis prayed, where Bossuet preached to Louis XIV., where James II. (Stuart) heard mass for a number of years, has *not* been "devoted to a collection of casts of prehistoric Gallic tombs." *Prima facie*, that would be impossible, because the only prehistoric tombs in Gaul of which a cast could be taken are dolmens, and one dolmen would be enough to fill the chapel. Moreover, if I had put anything "prehistoric" in a Gothic chapel, I should have given a rather displeasing idea of my taste. The truth is, that the chapel has been devoted to originals and casts of the Christian antiquities from the eight first centuries A. D., as they have been discovered so frequently in Southern France, and especially to those very interesting sarcophagi carved with figures and scenes relating to the Old and New Testament. A corner of the chapel contains the few early Jewish inscriptions which have been preserved, dating from the seventh to eighth century A. D. That is all, and it has nothing "prehistoric" about it.

May I add that this new collection of early Christian antiquities, put together in one of the most charming works of Christian architecture, well repays a visit, even from those familiar with the larger Christian museums in Rome?—Truly yours,

SALOMON REINACH.

MUSÉE DE ST.-GERMAIN-EN-LAYE,
December 3, 1902.

## A VOCABULARY OF THE ITALIAN WORKS OF DANTE.

To the Editor of The Nation:

Sir: In an appeal for an increase of membership just issued by the Council of the Cambridge Dante Society, it is mentioned, among other requirements, that "there is great need of a new *Vocabolario Dantesco*." Perhaps I may be allowed to state that I have been for several years, and am now, actively engaged in the preparation of a complete Vocabulary of the Italian Works of Dante, which is to be published by the Clarendon Press at Oxford, uniformly with my 'Dictionary of Proper Names and Notable Matters in the Works of Dante,' published four years ago. I declared my intention of undertaking the task at the close of the preface to my 'Dictionary,' and the work itself, which is now well advanced, has been several times mentioned in the London *Athenæum* and other English literary journals, as well as in the Clarendon Press announcements.

I make this statement in order to prevent any English or American Dante student from devoting time and labor, in response to the appeal of the Dante Society, to a laborious piece of work which has already been undertaken by another, and for the publication of which by the Oxford University Press an agreement was signed in 1898.

Paget Toynbee, D. Litt. Oxon.

Dorney Wood, Burnham, Bucks, England, November 29, 1902.

## LETTERS OF CHARLES AND MARY LAMB.

To the Editor of The Nation:

Sir: In the work of preparing the new edition of the Letters of Charles and Mary Lamb upon which I have been engaged for some years, I have endeavored, wherever possible, to obtain new copies of letters rather than reproduce those which are already in type. English possessors of Lamb MSS. having most cordially assisted me in this project, I take the opportunity of asking those owners of Lamb MSS. in America to be so good as to extend to me the same facilities, for without their coöperation no edition of Lamb's letters can possibly be complete. I shall be obliged if they will kindly address me in care of Messrs. G. P. Putnam's Sons, New York, who will make arrangements for the copying or collation of the MSS.—I am yours faithfully,

E. V. Lucas.

Froghole, Edenbridge, Kent, November 28, 1902.

## EGYPT EXPLORATION FUND COMMITTEE IN BOSTON.

To the Editor of The Nation:

Sir: Allow a brief amendment to the statement of your correspondent, in your issue of November 27, respecting the formation of what President Evans, in his annual address, calls "a local committee, under whose charge we may hope the affairs of the fund in Boston will prosper."

Did "the independent supporters of the Fund in Boston" constitute, or form, this new committee placed to administer the affairs of the whole American Branch? By vote of the London Committee just one man, a non-subscriber, was asked to form so important a committee. Of the seven members appointed, three were not subscribers to the Fund; one had quite recently joined; three are attached to the Museum here, to which the appointer belongs; two of the seven are now abroad. The reorganization is radical to the extreme, as even the office of Vice-President for the United States, of an honorary nature, is taken from me, by the request of the one man who formed the Committee. No wonder there is commotion all over the American Branch, especially as it had been officially informed that "the London Committee is ever anxious that the American Branch should be administered in accordance with the wishes of American subscribers."

My circular, free to all, explains the situation. William Copley Winslow.

*Founder of the American Branch, E. E. Fund.*

525 Beacon St., Boston, December 12, 1902.

# Notes.

A prize of six thousand dollars will be given to the author of the best book on the coincidence of science and revelation, the divine origin and authority of the Christian Scriptures, the existence of God, submitted to President Harlan of Lake Forest College, Illinois, on or before June 1, 1905, in manuscript, with triplicate type-written copies. "Scientific men, Christian philosophers and historians of all nations" may compete for the prize. The successful treatise will be published in book form, and initiate the "Nathaniel Bross Library," so called from the son of the founder of the fund (1897), William Bross of Chicago. Lake Forest Bross Lectures will also be instituted from the same endowment, and will in turn beget volumes. President Harlan should be addressed for particulars.

Mr. Richard Le Gallienne proposes to issue early next year 'Odes from the Divan of Hafiz, Freely Rendered from Literal Translations,' by himself. The edition will be limited, in small and large paper, and Mr. Le Gallienne will be his own publisher. Subscriptions should be sent to him at The Schuyler, 59 West Forty-fifth Street, New York.

The death of the Rev. Dr. Joseph Parker, pastor of the City Temple, London, will hasten the appearance of his life by Dr. William Adamson, already in preparation by Fleming H. Revell Co.

A new Vale Press volume, in red and black, is announced for publication by John Lane—'Ecclesiastes and the Song of Solomon,' in one volume, octavo. The type used is the King's Font designed by Charles Ricketts. One hundred copies have been printed for America.

A. M. Robertson, San Francisco, announces 'The Divine Question,' by Lionel Josaphare, first of the "Flame Series," devoted to literature, politics, and social topics.

A book wholly made up of light and gossipy talk about the social merits of men and women prominent in their day is not, of course, to be taken seriously. In this period of Dames and Daughters athirst for enlightenment as to the looks and bearing, the doings and sayings in the salon, of their grandmothers and others of the family, a demand may exist for such a volume as Anne Hollingsworth Wharton's 'Social Life in the Early Republic' (Lippincott). Miss Wharton does this kind of work well. Her style is easy and attractive, and pervaded by an air of refinement and good breeding. So far as delicacy of treatment is needed, the author meets every requirement. There is little that is new or original in these pages; but the reader who is taken over familiar ground, has a pleasant guide to accompany him. The book is well printed, and among the many illustrations will be found a few portraits of charming women.

'Memories of Vailima' (Scribners) is made up of selections from the diaries of Mrs. Isobel Strong kept in 1893 and 1894, and of recollections of Mr. Lloyd Osbourne during the whole Vailima period. Illustrations from photographs accompany the narrative, and some unpublished verse is included. It must be confessed that the thread of reminiscence is spun overfine by Stevenson's step-children, but here and there the book does something to explain that curious half-theatrical and wholly patriarchal household at Samoa.

The publishers of "The Makers of British Art" (London: Walter Scott Publishing Company; New York: Scribners) are to be congratulated on at least one reform. In the 'Romney' of this series the illustrations are, at last, more often from the paintings than from engravings after them, while the list of illustrations states the exact facts in each case, even to the engraver's name when an engraving is used. The text, by Sir Herbert Maxwell, makes small critical pretensions, but gives in readable form the main facts in the life of a painter as much overrated to-day as he was, for a time, unduly neglected.

But for the pressure of the holiday season we should like to give more space than we can at present command to 'Delight the Soul of Art,' a series of lectures evidently delivered in some art school (but where is not stated), by Arthur Jerome Eddy (J. B. Lippincott Co.). The book is well written and well printed, and contains another attempt at a definition of art, from which definition, once accepted, all sorts of consequences flow which would be entirely different if the definition were altered. In this respect it is like Tolstoy's 'What is Art?' though the results are not so absurd. With a great deal that Mr. Eddy says all would agree, but a great deal more seems to us fallacious. We had marked several passages for comment, but must content ourselves with this general notice.

In 'East of Paris' (E. P. Dutton & Co.) Miss Betham-Edwards discourses pleasantly of a number of towns and villages lying in that direction and extending as far as Alsace-Lorraine. She writes of what pleases her, and the result is so little of a guide-book that she leaves out the cathedral from her chapters on Rheims, because it "has been so fully described elsewhere." Since there are no illustrations in the text, we can see no reason for the employment of the heavily coated paper on which it is printed. The "colored illustrations" mentioned on the title-page are only four in number, and give out very early, the last two-thirds of the volume having only a couple of process plates from photographs. The quality of the four given, however, is not sufficient to make one greatly regret the absence of others.

'Paris, Past and Present,' by Henry Haynie (Frederick A. Stokes Co.), is more like

a guide-book, and contains a great deal of miscellaneous information, most of which is probably correct enough, though we doubt some of it, but is peculiar in the things it does not contain. The section on the Place du Carrousel, for instance, gives us a little of everything else, but no statement of when or by whom the Arc du Carrousel was erected. The next section begins, "If, however, the arch in the Carrousel is out of place"—which is the first time we have heard so—and goes on to describe the Arc de l'Étoile without mentioning the name of Rude. After that it hardly surprises us that the Pantheon can be written of without reference to Puvis de Chavannes, and the Opera-house with no mention of Carpeaux and the barest mention of Baudry. The heading of the chapter on the Théâtre-Français contains the words "Statue of Voltaire," but we have been able to find no mention of it in the text, which does, however, contain the name of a lady hitherto unknown to fame, Victorine Sardou; the printer is probably the author of her being. The illustrations, from photographs except in the case of objects no longer existing, are excellent.

In the early part of the present year our Paris correspondent gave a very extended account of Mme. Arvède Barine's 'La Grande Mademoiselle, 1627-1652.' This will dispense us from considering intrinsically the authorized English version just handsomely brought out by G. P. Putnam's Sons, with portraits and views, and an index. The translation, by Helen E. Meyer, adheres closely to the French, and has consequently produced correct rather than idiomatic or flowing English. The typography is bold.

Our remarks the other day about the futility of ornamental handlettering as applied to verse in magazines and books receives signal exemplification in the reissue of Arthur Upson's 'Octaves in an Oxford Garden' (Minneapolis: Edmund D. Brooks). We defy any one to read these pages with comfort and understanding. The lettering is by Margaretha A. Heisser, as we painfully decipher the base-line of the title-page, practically all run together. How can the poet think his work glorified by this treatment? Even the simple rule of non-division of monosyllables is violated in octave xxiii., where bid- es lifts its front beside bid- den; and, worse yet, in octave viii. we encounter kn- own!

*Per contra*, Joaquin Miller's overproduction is the cause of the fine type and rather cheap appearance of the revised edition of his Complete Poetical Works (San Francisco: The Whitaker & Ray Co.). In all his prefatory advice to "the young in letters" we find nothing on this head, though a warning against writing too much would outweigh the precept, "Use the briefest little bits of baby words at hand." Reviewing his work, Mr. Miller can commend to his lovers "only the few last poems in the book." The public may prove more indulgent, according to its recollection of this amiable writer's earlier verse, and according to its patience.

It was inevitable that Mr. Marion Crawford's 'Ave Roma Immortalis' (Macmillan) should concede something from its original two-volume sumptuousness and cost for the sake of a wider ownership. The one-volume edition, revised, now issued, is in all essentials the same as its predecessor, to which we gave our suffrage just four years ago, with the caution that it is a work for the elect to whom Roman legend and history are already more or less familiar. The two-dozen full-page photographs are indeed wanting, but the spirited pen-and-ink sketches imbedded in the text remain, together with the map of Rome, the chronological table of Emperors and Popes, and the arms of some of the noble houses which had no popes.

Dickens's 'Child's History of England' reappears in a square 16mo of 500 pages, with numerous pen sketches by Patten Wilson (London: Dent; New York: Dutton). Not all the designs are worth while, the best being those illustrative of manners and customs; but naturally the "strenuous" situations are preferred by the artist.

Mr. Herbert B. Turner of Boston adds to his pretty 16mo reprints 'Commodore Trunnion's Courtship, and the Cruise of H. M. S. *Thunder*,' extracted from Smollett's 'Peregrine Pickle' and 'Roderick Random'; and two volumes of Stevenson's 'Familiar Studies of Men and Books.' The Smollett has a frontispiece portrait, the Stevenson several portraits. The type is large, and the impression clear and legible.

McClure, Phillips & Co. publish a collection of new translations from Tolstoy by Mrs. Garnett—'The Death of Ivan Ilyitch'; this title covering also "Family Happiness," "Polikushka," "Two Hussars," "The Snowstorm," and "Three Deaths," most of these dating from the fifties. Of Mrs. Garnett's competence and experience in translating the great Russian author, we need not speak. The book is generously got up.

Frances Weston Carruth, author of 'Fictional Rambles in and about Boston' (McClure, Phillips & Co.), owed her readers a bibliography if not an index. She should have grouped at the end the titles of the works of fiction which she has ransacked as a pretext for this book. This would have emphasized, to be sure, the demand made upon the reader to interest himself in spots connected with incidents in minor fiction of which he may never have heard. The photographic illustrations are well chosen, excellent, and characteristic of the city.

Lilian Whiting's 'Boston Days' (Little, Brown & Co.) is of another sort. Its four chapters treat of "The City of Beautiful Ideals," "Concord, and its Famous Authors," "The Golden Age of Genius" (meaning the age of Emerson and his fellow-poets, Longfellow, Holmes, Lowell, Whittier, and Parsons, together with Hawthorne, Mrs. Stowe, and Edwin P. Whipple, J. T. Fields, Mrs. Howe, and many another literary light); and "The Dawn of the Twentieth Century," of which we confess our inability to give a summary notion. There are portraits, views of homes, facsimiles of MSS. Dyed-in-the-wool Bostonians may delight to browse in these discursive biographical and semi-historical sketches, of which we could almost guarantee an indefinite continuance by the same hand.

After five years, Prof. Andrew Seth (now styled Seth Pringle-Pattison) offers a second edition of his 'Man's Place in the Cosmos, and Other Essays' (Scribners), to which we shall return no further than to notice two additional papers by title, "The Venture of Theism," a critique of Dr. Campbell Fraser's Gifford Lectures on the "Philosophy of Theism"; and a study, "The Life and Opinions of Friedrich Nietzsche."

Nor can we tarry longer over the new edition of the collectivist plea of Sidney and Beatrice Webb, 'Problems of Modern Industry,' more recently noticed by us (Longmans). The present, popular output is provided with an introduction which consists mostly of a discussion of Trusts, conveying the substance of the author's article in the *International Monthly* for February of the present year.

We can barely, in this crowded season, call attention to an unusually well-conceived series of reprints of historic rarities undertaken by the Burrows Bros. Co. of Cleveland. Three have thus far appeared —Daniel Denton's 'Brief Description of New York,' from the original edition of 1670; Charles Wolley's 'Two Years' Journal in New York,' 1701; and Thomas Budd's 'Good Order Established in Pennsylvania and New Jersey,' 1685. Not only has commendable taste been shown in the manufacture, but each work has been assigned to an expert editor—respectively, Felix Neumann, Prof. E. G. Bourne, and Frederick J. Shepard. The original title-pages are given in facsimile.

Mr. Willis J. Abbot, in 'American Merchant Ships and Sailors' (Dodd, Mead & Co.), gives a popular and fascinating account of the development of each branch of our mercantile marine—coastwise and deep-sea sailing ships, river steamboats, lake steamers, the fishing fleet, etc., etc. While written with sober accuracy, the book yet reads like a romance, so happily is the yarn spun. It deserves wide appreciation, especially at this Christmas season, for its matter and manner, as well as for the attractiveness of the publishers' part. To the youth who seeks amusement, and to his father who seeks information, it will be alike welcome. Although its modest purpose is to interest the general reader in the truth and the romance of seagoing from colonial days to the present time, it only lacks a bibliography to make it of real value to the student of history. It is injudicious, to say the least, to hold up the leader of the Greely expedition as hero and model, and unfair to charge the expedition's ghastly record, which merely proves the folly of setting a landsman to do a seaman's work, against the American sailor, who has misadventures enough of his own to answer for without borrowing from the soldier.

A 'Treatise on the Law of Intercorporate Relations,' by Walter Chadwick Noyes (Boston: Little, Brown & Co.), ought to prove a valuable addition of a novel sort to legal text-books. It deals with the sale and leasing of one corporation to another, merger, consolidations, combinations, conspiracies, monopolies, the Federal Anti-Trust statute, and State Anti-Trust statutes. The author is a judge of the Connecticut Court of Common Pleas. As we understand him, one underlying theory of the book is that a combination of capital may be unlawful without being a conspiracy. In chapter iii. will be found some extracts from judicial decisions bearing on the pending Northern Securities merger case, together with some principles which the author regards as established, but which seem rather in conflict with one another. The book is marked by accuracy and moderation of statement.

The Government Printing-Office has published by order of the Secretary of War 'Reports on the Law of Civil Government in Territory subject to Military Occupation by the Military Forces of the United States,' by Charles E. Magoon (Washington). The author of these reports is law officer of the Division of Insular Affairs. Most of them embody opinions relating to routine business. One or two involve broad Constitutional and politico-legal questions, such as the legal status of the islands, the powers of the military governments in the islands, and the doctrine that the Constitution extends to them *ex proprio vigore*.

Messrs. Curtis & Cameron of Boston send us a new catalogue of their Copley Prints, which include hundreds of the best examples of our modern American painters, besides a selection from foreign art and the old masters. The list is arranged alphabetically by artists, and small half-tone cuts, grouped several on the page, at once are a convenience to the intending purchaser, and make the book a thumbnail record of our contemporary painting. A more scrupulous care in recording the place and ownership of every picture would not cost the publishers great pains in the next edition, and would be a feature greatly appreciated by students and collectors.

The Antarctic regions are the subject of the opening article in the *Annales de Géographie* for November, in which the author, M. Zimmermann, calls attention to the fact that few of the many problems which this region presents have been solved. Nor is it to be expected that the expeditions now engaged in its exploration will add much to our knowledge of the topography of the continent. In an account of Algeria, stress is laid upon the fact that it is a land of contrasts, both in its physical conformation and in its inhabitants. "It has no natural centre. Although there are some places whose importance has never been completely effaced, its capitals have, so to speak, travelled across the land in the course of its history." This great contrariety adds much to the difficulty of its administration as well as of its development. Professor Douxami describes the middle valley of the Rhone, and M. Gallois defends the authenticity of the letter of Toscanelli to Columbus against the arguments of Henry Vignaud.

—The preparation for the sale by auction of the late Henry G. Marquand's collection of works of art has involved the getting-up of an illustrated catalogue to which a great deal of labor and thought has been given. That which will attract the greater number of lovers of fine art will be, perhaps, the set of plates produced by photographic process and accredited to A. W. Elson & Co. of Boston. There may be seventy of these full-page plates, and many of them contain a great number of separate objects: thus, while five plates contain each three or six or ten vases of Chinese porcelain, three are devoted to Japanese treasures, four more to Greek ceramics, including statuettes and groups, and six to rugs and tapestries. Two of the most interesting plates are those which show Hispano-Moresque dishes and round plaques. Three of them give the three pieces of Della Robbia ware well known to all persons who visited Mr. Marquand's house. If next we consider the twenty plates devoted to paintings, we find some rarities and some treasures of a sort not requiring rarity to make them precious. There is an admirable landscape by Theodore Rousseau, and, to contrast with it, a really notable Constable, "Dedham Vale." There is a portrait by Romney, and another by the less known but equally respectable John Russell, the miniaturist. There are two Hoppners, one Reynolds, and an authentic portrait of Charles Lamb by Sir Henry Raeburn. Three water-colors by J. M. W. Turner are grouped upon one plate. The frontispiece is that portrait of Mr. Marquand himself, by John S. Sargent, which is owned by the Metropolitan Museum of Art. Concerning the text (for a *catalogue raisonné* like this may be said to have a text), it appears that, the paintings and the tapestries taken together, the Japanese pottery and lacquer, the Oriental rugs, the Limoges enamel, the antique glass, the Greek ceramics and metal work, the intaglios and gems, the prints, and finally the books, have had each the especial care of a person thought to be master of the subject. Elaborate articles follow the names of the pieces in the department of enamels, and these, with an intelligent prefatory note, are ascribed to Mr. Roger Riordan. This department is, however, a small one, of necessity: there are not many fine surface enamels in the world. The department of Oriental rugs is larger—some fifty items; and here, also, a proportionately thorough examination is evident, the little understood significance of the flower patterns and Persian or Arabic symbolism having been carefully worked out, as far as conditions might allow, by Mr. John Kimberly Mumford. The brief notices given to the three Robbia bas-reliefs may be thought to be the work of Mr. Marquand's son, Prof. Allan Marquand of Princeton, well known as having studied with especial care the work of the great Luca and his successors and disciples. A brief introduction has been furnished by Mr. Russell Sturgis.

—Valuable to purchasers of Japanese art works and bric-à-brac is 'Mythological Japan,' by Alexander F. Otto and Theodore S. Holbrook, published by Drexel Biddle of Philadelphia. Bound in raw Shikii silk, with embossed pages which are folded double at the edge, in Japanese fashion, with the backgrounds and shadow tints appearing on the silk-like paper throughout the book, we have a dainty product from beyond the Pacific. Four of the inserts are mounted on mats of knotless *kiri* wood, and there are sixteen panels and full-page plates in color, with numerous illustrations of mythological subjects, marginals of Oriental symbols, and reproductions of subjects in noted collections. Besides happily reproducing the work of Japanese artists, the object of the compilers has been to interpret the symbolism of the Far East, even to the colors themselves, which have significance by their constant association with certain lines of ideas. Storks, bamboo, and lotus have been very happily treated. The picture, on page 27, of the carp making strenuous attempts—not always crowned with success—to surmount the waterfalls is a noted instance of optimistic symbolism; for as the sluggard is exhorted to go to the ant, so is the ambitious youth pointed to the leaping carp. In the case of the longer legends, the complete story, though in condensed form, is given in text on the same page with the symbol; perhaps the most notable instance being, so far as artistic power and interpretation are concerned, that on page 37 of Kiyohime, "the personification of disappointed love" and a famous character in the classic opera, or *No*. The description of the "Hara Kiri" (hara-kiri), being in the present tense, would almost imply its survival at the present time. It might have been added, though the text nowhere suggests it, that the only difference between hara-kiri and *seppuku* is purely verbal, being the same as that between belly-cut and abdomen-opening, the more elegant Chinese term being used for the plainer vernacular. Some slight acknowledgment of the literary sources in English from which not a little of the text, especially that on the dragon and phœnix, has been derived, would not have been out of order.

—It was a happy thought in Miss Carolyn Wells to make her 'Nonsense Anthology' (Scribners), and few could be better fitted for the task than one whose precept and verse assure her attitude towards this important department of literature—an attitude compounded of reverent adherence and the expert's sense of humor, with this still further specialized into an unerring flair for whatever stamps humor as nonsense. Nonsense (technical nonsense, be it understood) has a claim of long descent. In this collection are early English examples dating back to 1617. The assembly of authors is gentleman-chaperoned (for it is instructive to find but three women's names among those of contributory writers, whatever our suspicions may be as to certain anonymous verses) by such dignity as Ben Jonson, Dr. Johnson, Goldsmith, Milton, and Bishop Corbet, who in the seventeenth century writes verses beginning "Like to the thundering tone of unspoke speeches." Lear, of course, Gilbert, and Lewis Carroll figure prominently, but hosts of others sit up worthily with these kings. We must venture, in spite of the illustrative anecdote, to take exception to a statement in the preface that "it is a fact that among the general reading community the appreciators of Lewis Carroll are surprisingly few." But even this trifling stricture is needless, since, if the capable editor is mistaken on this point, correction's tidal wave will swiftly overtake her. The indexes are satisfying, the make-up trim and commendable; the volume is one that "no family can afford to be without." We are persuaded that the compiler will feel that it has served its purpose if it sends its readers to the great originals; and should it thus be made the humble instrument of acquainting them with nonsense dignified by age, and with their Gelett Burgess, their Oliver Herford, their Owen Seaman, their Peter Newell, it will not have been collected in vain.

—Bishop Lawrence's 'Roger Wolcott' (Houghton, Mifflin & Co.) is a brief but effective biography. There was no ecclesiastical bond between the Governor and his biographer, but a friendship of forty years' continuance, the warmth of which is felt throughout the book. Believers in heredity will take fresh courage from a genealogical chapter which traces back the lineage of Gov. Wolcott to Oliver Wolcott, a signer of the Declaration, and his father, Roger Wolcott, Governor of the Connecticut Col-

ony. A pathetic chapter is that which describes the brothers of our time, Roger and Huntington Wolcott, the latter enlisting when but seventeen years old and dying just as the war-drums stopped beating. There was sensible deepening of the younger brother's nature by this tragic loss. At Harvard, Roger was a member of that class which was the first to receive its degrees from President Eliot, and his class-day oration was so good as to fasten itself on the memory of a war-worn veteran, Gen. Sherman. A chapter which describes him as "A Citizen" has for its climax his support of Cleveland in 1884, the more remarkable because he was, like George William Curtis, a strong party man. After the election he insisted on his regular standing in a Republican caucus, and so successfully that in 1885 he was sent as a delegate to the Republican State Convention. But his "treachery" was not forgotten, and in 1892 he was nominated for Lieutenant-Governor by 499 votes against 473 opposing. Nevertheless, he ran so much ahead of his ticket that he was elected, and yoked, not unequally, with a Democratic Governor, the late William E. Russell. It is doubtful if the two offices were ever better filled. The chapter on Wolcott's accession to the Governorship and his conduct in that office refreshes our memory of his courageous action in defiance of the labor agitators and the Spanish war "veterans" making monstrous claims. There are many extracts from his speeches which are conclusive of his ability to invest sound political ideas with a glowing style. In the Spanish war he made the best of a bad business, and did much to alleviate its horrors. His untimely death gives to the association of his name and fame with Gov. Russell's a more poignant note. Six portraits, from childhood up, of a face of striking beauty constitute a very notable addition to the pleasure which the book assures.

—In the second edition of his 'Money and Banking' (Boston: Ginn & Co.) Mr. Horace White has done much more than bring down to date the facts, and up to date the discussion of the facts, relating to that more than ever timely subject. The work has been practically rewritten, though it retains, of course, the characteristic features of the original edition, with the exception of such parts as had special reference to controversies now to be regarded as obsolete. To the general subject of silver and bimetallism much less space is devoted than in the first edition, which appeared in the fall of 1895. The fulness and interest, however, of the illustrations from American history which the sub-title of the book promises are entirely unimpaired. In our review of the first edition we remarked that, "apart from a few short chapters, the exposition of principles has the appearance of being brought in incidentally, as though suggested by the events of the story, rather than as constituting the central object of the work"—a mode of treatment calculated to be extremely attractive to the general reader, but not fully satisfactory to the economic student. The rewriting of the work has been largely occasioned by the author's desire to cast it into a form more adapted to systematic study, and in this he has succeeded without sacrificing the freshness or changing the essential character of his original presentation. The part relating to the subject of banking in its broader aspects has been greatly enlarged, and in its present shape will be found invaluable by those desiring to understand the current discussions on that subject in this country. We note the misprint "millions" for "thousands" in the line preceding the table referring to the Scotch banks (p. 397), and the same slip in the corresponding place as to the Bank of France (p. 406), and as to the German Reichsbank (p. 410). Among the appendices is one devoted to the Indianapolis Monetary Commission's plan for a national bank currency, and another to the Fowler bill; Mr. White gives a cordial endorsement to the former.

## MORE BOOKS ON ART.

*William Hogarth.* By Austin Dobson. With an Introduction on Hogarth's Workmanship, by Sir Walter Armstrong. London: William Heinemann; New York: McClure, Phillips & Co. 1902.

*Turner.* By Sir Walter Armstrong. London: Thomas Agnew & Sons; New York: Charles Scribner's Sons. 1902.

*Constable* and his Influence on Landscape Painting. By C. J. Holmes. Westminster: Archibald Constable & Co., Ltd.; New York: E. P. Dutton & Co. 1902.

*Pintoricchio* (Bernardo di Betto of Perugia): His Life, Work and Time. By Corrado Ricci, Director of the Brera, Milan. From the Italian by Florence Simmonds. London: William Heinemann; Philadelphia: J. B. Lippincott Co. 1902.

*Luca and Andrea Della Robbia and their Successors.* By Maud Cruttwell. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. 1902.

*Nineteenth-Century Art.* By D. S. MacColl. With a Chapter on Early Art Objects, by Sir T. D. Gibson-Carmichael, Bart. Glasgow: James MacLehose & Sons; New York: Macmillan Co. 1902.

*William Morris,* Poet, Craftsman, Socialist. By Elizabeth Luther Cary. G. P. Putnam's Sons. 1902.

*Frederick Walker.* By Clementina Black. (The Popular Library of Art.) London: Duckworth & Co.; New York: E. P. Dutton & Co.

Books could hardly vary more in physical presence than do these eight, from the ponderous folios on Hogarth, Turner and Constable, and the splendors of colored illustration of the 'Pintoricchio,' to the modest little volume of the "Popular Library of Art"; but they are all entitled to serious consideration for one quality or another, and the order of bulk is as good as any in which to consider them.

The two great books on Hogarth and Turner, though from different publishers, are really companion volumes, and both will match in size and general appearance the splendid publications on Reynolds and Gainsborough which have been brought out in the last year or two by Heinemann in London and Scribners in New York. The literary quality of Hogarth has always tempted writers aside from the consideration of his artistic merit, and Mr. Austin Dobson's text, which is not new, is no exception to the rule. His criticism is founded, generally, on the plates rather than on the original pictures, and concerns itself rather with the story-telling and the psychology of the artist than with his power of pictorial composition or of painting. Recently a reaction has set in, and the world has discovered that Hogarth was really a considerable painter as well as a satirist. Under this reaction the illustration of this volume has been planned, which does justice for the first time to Hogarth's pictures, and Sir William Armstrong has been induced to add an introduction dealing with the painter as a workman. In this we think the reaction has carried him too far, and leads him to minimize the stepping aside from art for moral and literary ends of which Hogarth was undoubtedly guilty. That artist was a sound painter, if not a brilliant one, and had a good deal of pictorial feeling; but it is surely not true that he "has so wedded probability to æsthetic fitness, over the course of long histories, that at no point can we stop and say, 'There comes in the story-teller; there we have a detail that was not wanted in the pictorial scheme.'" Surely his continual recourse to *written* information of the names and actions of his characters, in letters or papers which could not possibly be read at the supposed distance of the spectator, is dictated alone by the wants of the story-teller. The declaration, on the basis of the etching of Simon Lord Lovat, that Hogarth was "potentially a great sculptor," seems to us another case in which Sir Walter has been carried beyond the bounds of sober criticism by the new interest in an art which has been neglected while the artist was over-praised for everything else.

At any rate, Sir Walter Armstrong has always something to say, and of Turner he has so much to say to the purpose that one is led rather to regret the sumptuousness of the volume in which his text appears as likely to distract attention from his criticism. In spite of its splendid illustration, this book is so far from being a mere picture-book that we consider it the best analysis of Turner's genius that has yet appeared, and regret extremely that we are not to have it in a cheaper, smaller, and more readable form. We have heard so much of Turner as a great creator, and have seen so much of his recklessness of local and even of general truth in the effort to render his gorgeous visions, that it seems at first paradoxical to maintain that he was rather an illustrator than a creator, and that Ruskin was right, after all, in thinking him a worshipper of nature, though wrong, precisely on that account, in thinking him the greatest of artists or even of landscape-painters. This, however, is what Armstrong maintains, with great ingenuity, and, as it seems to us, with great justice, explaining that lack of appeal of Turner's works to many artists who are constrained to admit his power and knowledge, but cannot like him. What many must long have felt, more or less dimly, Sir Walter Armstrong has clearly formulated. His argument is somewhat scattered through different parts of his book, and we shall endeavor to condense it and put it into our own words.

In the first place, then, Turner was no decorator. He cared for no art but painting, and cared for that primarily as an illustration of nature, not as a thing by itself. Many painters, at first sight much

more realistic than he, are more truly creators. Take Corot as an instance: he thinks in pictures, and creates a harmony of tones and forms as his first business; he can stick pretty close to the facts of a given scene, and yet his subtle modulations and modifications produce something which is really entirely independent of the facts, and even of nature itself, for its essential quality. Turner had little of this instinct for making a picture of the simplest materials; the materials themselves are what interest him most, and he crowds his canvas with myriads of them; they are never splendid and varied enough to express his excited interest in natural beauty and grandeur, so he enlarges and alters and falsifies them, not to create a work of art, but to make the scene itself more magnificent and spectacular than it really is. He spent half his life pitting himself against this or that artist of the past, and yet he never understood their art, and thought he had surpassed Claude or Poussin when he had put more natural fact into their framework; not seeing that the amount of fact contained was the thing of least importance. He had a prodigious industry, a colossal appetite for observation, and acquired a vastly greater stock of knowledge than any other landscape-painter; but he was less a painter than almost any of them, and had, at least in oils, no respect for his material and little for the limits of his art. His interest in nature gradually swung from the facts of things to the phenomena of light, but it was always the illustration of nature that interested him, and the intensity of this interest drove him continually to attempt the painting of the unpaintable. He admired the landscape of Italy, and he tried to put it all in one frame; he was interested in moonrise at sunset, and he put the moon and sun on the same side of the heavens. He had the pre-Raphaelite adoration, without the pre-Raphaelite humility, before nature; no one scene, no one quarter of the horizon, no one hour of the day satisfied him, but he must jumble all together, producing a kind of wonderful nonsense, glorifying nature by defying all its laws. He is audacious, energetic, powerful, but never self-restrained; he puzzles, shocks, excites, overwhelms, or merely disgusts, but he seldom pleases. Because, with all his "splendid lies," he yet hints at more natural truth than any other painter, he will remain, to the Ruskinian, the greatest of painters; to the lover of art it will always seem that many modest talents are more truly admirable.

Only a trifle less imposing in size and wealth of illustration is the volume devoted to another English landscape painter, who, though his genius is less striking than Turner's, has had a vastly greater influence on the art of the world. Turner's chief advocate, Ruskin, could see little or nothing in Constable's work, as he never learned to see anything in that of Constable's legitimate successors, the so-called Barbizon School. To-day we look upon these latter as the greatest landscape painters of all time, and consider it one of the glories of England that an English painter should have been an appreciable factor in the formation of their style. By means of three preliminary chapters on the art of landscape before Constable and two chapters on Constable's successors, Mr. Holmes has made his book an essay on the development of landscape art, into which is sandwiched a sufficiently detailed life of Constable himself. In such a review it is rather surprising how little the influence of Turner counts for. His scenic grandeur has counted for nothing at all in an art that has steadily grown more intimate, until the painter whom he may most have influenced by his key of light, Claude Monet, could spend his best efforts on a haystack. Constable's own influence Mr. Holmes is not inclined to exaggerate, though he does not minimize it. When the Romantic revolution was beginning in France, and the younger artists were trying to revive the art of painting, it was natural that they should be affected by the only school in Europe in which painting was still alive, the English. Bonington was an Englishman, and Géricault had spent years in England. In 1824 Constable and Lawrence exhibited in the Salon, the one receiving a gold medal and the other the Legion of Honor, while Delacroix was induced by the sight of Constable's pictures to repaint the background of his "Massacre of Scio" in a fresher key of color. It is true that at this time Rousseau was only twelve years old and Corot was not yet an exhibitor, but it was far from the last time that Constable's pictures were seen in France, and his influence was not exerted entirely through Delacroix. It was not dominating, but it was assuredly one that counted, and it was exercised in the direction of those peculiarly modern qualities, simplicity and intimacy of subject and truth of natural color and effect. Delacroix himself called Constable "le père de notre école de paysage," title enough to immortality.

If Turner was no decorator, Pintoricchio was nothing else. The lavish illustration of the present volume, much of it in colors, gives a better opportunity of judging his work than could anything short of an Italian journey devoted to him, and the result is but to confirm our impression of his essential insignificance. Only in an odd portrait or two does he show anything approaching serious artistic qualities. It is not merely that his drawing and painting, as such, are poor, but even the higher decorative qualities are absent, and he rather enriched the walls on which he painted than truly beautified them. He covered them with ornament and gold and bright colors, and produced a splendid and brilliant effect, but the harmonies of line and space that make the greatness of a Raphael are as lacking as the harmonies of light and color that make a Veronese. Signor Ricci lavishes the resources of connoisseurship in attempting to show which parts of the decoration of the Borgia apartment are by the master, and where we see the hands of his assistants; but really the difference of quality is so slight that the matter is of no importance whatever. It is all good enough for its purpose, which is the decorative effect of the whole; and for that effect we know that Pintoricchio was responsible. His one merit is that of an *entrepreneur* of decorations, and no one cares how many hands were employed in the actual work. That of his own, too, is little better than or different from the rest.

It is only when it becomes possible that Pintoricchio employed a greater man than himself that the question of his assistants assumes any real interest. Did or did not Raphael have anything to do with the work in the Siena Library? Vasari and tradition say yes; Signor Ricci says no. The drawings in the Venice Sketch Book prove anything or nothing, according as we decide who did them, but the best authorities seem still to leave some of them to Raphael. The very uncertainty would seem to point to *some* connection between the two painters. That Pintoricchio's methods were known to Raphael and greatly influenced him in the first of his own decorations in the Vatican, the "Disputa," is certain; but this does not prove that Raphael had been actually Pintoricchio's assistant. The question must finally be decided on the basis of a number of scattered drawings, and we must regret that the illustration of the present volume is here lamentably incomplete, and that the drawings are not given. Even Signor Ricci admits that one or two of them are by Raphael, but maintains that Pintoricchio used them as he had before used certain sketches of Orientals by Gentile Bellini. The most important of them, the squared sketch for the first of the compositions, now in the Uffizi, he "accepts as by Pintoricchio himself," and lets it go at that, without mentioning the chief arguments of Claude Phillips and others to prove that it is Raphael's. Were the drawing reproduced, as it is by Phillips, the reader might judge, and we do not see how he could judge otherwise than that Phillips is right. We may concede that the frescoes "do not contain a single touch from Raphael's brush"; but that Raphael, whether as paid assistant or complaisant friend, furnished the sketch for the first and specimen composition, seems to us to admit of little doubt.

Miss Cruttwell's book on the Della Robbias is a modest, conscientious, thorough, and scholarly study, and probably comes as near to disentangling the work of the several members of that prolific family as is possible at present. It is likely, for some time to come, to remain the leading authority for students, while its illustrations make it a possession for the general art-lover. In her high and deserved admiration for Luca's art, Miss Cruttwell cuts down the works attributable to him to their narrowest limits; her conservatism yielding in only one case that we have noted. She and Professor Marquand are a minority of two in attributing to the founder of the school the beautiful "Visitation" of San Giovanni Fuorcivitas, Pistoja, a work in every way worthy of his hand.

It would be difficult to find a book in which the text and the illustrations have a less intimate connection than in 'Nineteenth-Century Art.' Mr. MacColl, having been asked to write an accompaniment for a selection of pictures from the loan collection of the Glasgow International Exhibition of 1901, has given us an essay on the development of painting and sculpture in the nineteenth century, together with separate notices of the most important artists of that period. Both picture and text are good, and the text is the better for its freedom from the petty care of conformity to the pictures. The chapter on "Art Objects" deals more directly with the matter illustrated, but in its turn has nothing to do with nineteenth-century art. Mr. MacColl's discussion of the tendencies of modern painting, particularly of the growth of

that new view of color which is broadly called "impressionism," is admirable on the whole, but he seems to us to confuse still more the already confused use of the word "values." It is getting to be impossible to tell what any one means by "values." Fromentin, who perhaps first used the word in literature, meant the degree of dark or light of any color as distinguished from its hue, and generally referred it to masses of what painters call "local color" without much regard to small variations of light and shade. Later it came to include, in painters' language, all degrees of variation of light and dark from whatever cause, so that a picture was just in "value" if the variations of light and dark were truly noted, whether or not it possessed color, and even if it were done in monochrome. Mr. MacColl now extends it to cover the different *hues* of light and shadow under colored light, and, by making it mean too much, makes it mean nothing. He is taking for an example a snowy landscape under colored light, and says: "Each different angle and facet of the snow presents us with a different hue and a different tone, and the high reflecting power of the snow makes the difference of color more striking than the difference of tone. . . . All this is resumed in modern parlance under the term 'value'." He goes on to speak of conditions under which two lights should be "equal in tone" and differ only in hue, and he seems still to consider that the difference is a difference of "values." A painter would say that the lights differed in color or hue, and *not* in value. It is much to be wished that critics could agree on their vocabulary and restrict "value" to degree of light and dark; "color" to the variation of hue; and "tone" to the just combination of "value" and "color." As it is, "tone" is an even harder-worked word than "value."

We have not space to consider in detail Mr. MacColl's criticisms of individual figures in modern art, many of which show a clear and acute vision. His interest in modern technical problems grapples with and overthrows his insular partialities, and his mild depreciation of some of the greatest of British artists who are not "modern" is occasionally amusing.

If it were only for the illustrations, which give an idea of what he actually did in several of the arts of design, Miss Cary's single volume would give a better picture of William Morris than the two of Mr. Mackail's official biography, but the written picture also gains in clearness what it loses in detail. We see the whole man and the connection between the several and various parts of him, and find, as the thread running through everything, from his poetry to his Socialism, the curious sham-mediævalism which led him to concoct an almost unintelligible vocabulary for his later writings, and to design a Gothic type when he wanted to make printing easy to read as well as beautiful to look at. He always mistook his emotions for reasoning, and his emotions were stirred only by what was old. He "wanted to make John Bull over again into John Calf," as Charles Reade said, and his ultra-conservatism led him into Socialism, because the modern world was so intolerable to him that he was willing to destroy it altogether rather than acquiesce in it as it stood. A few years' experience convinced him that he had really nothing in common with the agitators among whom he found himself, and he drifted back into amiable dilettantism and the futile effort at reviving the art of the past instead of improving that of the present. He made the effort pay, as far as he was personally concerned, but we cannot think he will have any great influence on the future as regards either the conditions of artistic production or the style of art produced, though he undoubtedly contributed greatly to the revival of interest in the minor arts.

People still seem to take an interest in the diluted pre-Raphaelitism of Fred Walker, and this artist, whom Mr. MacColl dismisses with a few lines, is the subject of one of the little volumes of the "Popular Library of Art," a volume far from equal to some of its predecessors in interest of subject or mastery of treatment, though it is a very good book in its way. We must confess that, for us, as for many others, the best of Walker's production is contained in his illustrations and the water colors founded on them, like the "Philip in Church"—things in the vein of Millais's black-and-white work. His more ambitious oil paintings, such as "Vagrants," "The Plough," and "The Harbor of Refuge," are vaguely disquieting and unsatisfactory, and at first one wonders why. Critics who have felt this have usually traced the fault to the pseudo-Greek air of some of the figures, and Miss Black quotes some of them to that effect. Mr. Claude Phillips speaks of one figure as "aggressively Phidian in its calculated classic grace," and of another as "more classical still than the fustian-clad divinity of 'The Old Gate,' and more self-conscious"; while Ruskin speaks of "the ridiculous mower, galvanized Elgin in his attitude." Upon this Miss Black very properly comments: "Let us grant that both figures do resemble Greek statues; let us even suppose that some contemporary of Phidias had left a statue in this very pose of the mower—what then? If Walker's figures are true to that of which they and the Elgin marbles alike are but reflections—to life, that is, and to the natural, unstudied movements of human action—why complain of what the later presentment has in common with the earlier." At first blush this seems unanswerable. Why, indeed, should that very studied beauty which is a merit in classic sculpture become a fault in modern painting? And yet one instinctively feels that Ruskin and Phillips are right.

We think the key to the difficulty is to be found in another part of this volume. Walker's "one recorded saying" about art is given on page 15, and it is that "composition is the art of preserving the accidental look." That is the saying of a man who had little feeling for composition, and it is the lack of composition that spoils Walker's later work. Classic figures demand to be seen in classic compositions and with classic backgrounds. As long as Walker's figures were as "accidental" as his backgrounds and his composition, everything was at least harmonious and enjoyable in its own way. When he began to give us studied and classic poses, the eye resented the absence of great lines of composition and the presence of unassimilated accident in the landscape, and found his work inharmonious and baffling. Perhaps if he had lived, he might have learned to treat the landscape as he did the figure and thus secure a graver harmony. Perhaps, as some of his latest work seems to show, he would have gone back to something like his earlier method. It seems symptomatic of natural weakness that the painter of the French school who most impressed him was Jules Breton.

## ELLWANGER'S PLEASURES OF THE TABLE.

*The Pleasures of the Table:* An Account of Gastronomy from Ancient Days to Present Times. By George H. Ellwanger. Doubleday, Page & Co. 1902. 8vo, pp. 477.

George H. Ellwanger, M.A., is a man (for his observations on truffles would, by themselves, suffice to persuade us of the error of 'Who's Who in America' in making him his parents' *daughter*), and is, indeed, a well-known author, not destitute of wit, and an adept at handling the pen. Nobody will expect to find here the *esprit* and steely style of Brillat-Savarin—a mere knack, after all, since Balzac could exactly imitate it throughout a whole volume. But this work has the advantage of being agreeable reading, and not that revolting mixture of physiology with appeals to the reader's personal consciousness. Its tasteful covers enclose hardly a single page that is not positively entertaining. The writing has all the lightness and propriety that its subject demands, with a certain appropriate aroma of French, as indefinable as that of a dish of fresh truffles still covered by the napkin, a just-opened bottle of Léoville-Poyferré alongside of it—

> "Et je ne comprends pas quel expert inhabile
> A pu dans les seconds classer le Léoville,"

says a poet worthy of Mr. Ellwanger's attention, Biarnez—mingling its perfume. There are no Gallicisms in the syntax nor in the acceptations of words; the English is irreproachable, is scrupulously, almost fastidiously, correct. There are a great many translated passages of some length, both in prose and in verse; and these are done so deftly (where the versions are not borrowed) that it is a pleasure to compare them with the originals. The style is plastic, shaping itself to the subjects of the different chapters. There is in it, through the greater part of the volume, a dash of Charles Lamb, very suitable to a book about books, so long as it is not so strong as to seem put on. For, mainly, this is a book about books, a sufficiently complete history of gastronomy.

Of original discussion of nice questions of preference in eating there is not very much. Nor can we regret it. If there be any direction in which the author's discrimination is less unerring than the laws of nature, it is just in this matter of eating and drinking. From a writer who would heat a dining-room to 70 degrees or 73 degrees, who pronounces that Mohammedans and Hindus have no cuisine worthy of the name (thereby calling to mind one of the lightest, most appetizing, and best-wearing of the dishes of this sublunary orb, pilaf, not to speak of kabobs, of those *entrées* into which the gourd enters, nor of those wonderful concoctions of mince-meat and esculents that are cooked in hermetically sealed porous earthen vessels; calling to mind, too, so original and satisfactory a repast as one of which a good curry forms the centre); who prefers the veal of "Germany," taken indiscriminately, to that of

French Lorraine, and the *pré salé* of Normandy and Brittany to the wild mountain mutton of Asia Minor; who holds that the sweet breath of the lettuce ought to be contaminated with that of onions, instead of being wafted to the empyrean on the cherub wings of garlic; who praises what is coarsest and indigestiblest in the "American cuisine," and overlooks the many delicacies that abound on humble tables scattered through our remote districts—from such a writer we can content ourselves with receiving but a meagre nosegay of his gastronomic decisions. His erudition, on the other hand, is boundless, or bounded only where print is bounded; and some of his chapters must perforce have resulted from his own researches, since there are no secondary authorities from whom they could have been drawn. He need not fear that any reader can fail to appreciate the range of his acquaintance with the books. In giving passages from Dionysius of Sinope, from Cratinus the Younger, from Philemon, from Hegesippus (whom he calls Hegesander), from Artemidorus Aristophanius (whom he calls Artemidor), and from other such, there was no occasion for assuming an air of having searched their writings through, since the learned and the simple will otherwise be sufficiently impressed with the author's industry, while everybody particularly interested in gastronomy will know perfectly well what the single source of all those fragments is.

The work is one of real value; but if we are asked whether or not it is accurate, we shall be reminded of a question and answer once overheard in a Nahant barge: "Is Asy's wife pious?" "Well, she's *'piscopal*-pious." So of this book, we may say that it has an after-dinner accuracy. Brillat-Savarin is referred to throughout as "Savarin," and in one place it is formally stated that the name was Brillat de Savarin. Now, while we make no pretension to private information, and while we are quite aware that persons who wished to speak flatteringly of him used sometimes to call him M. de Savarin, just as one might call Fouquier-Tinville M. de Tinville, if that could conciliate him ("Hé, bon jour, M. de Corbeau"), yet we believe the name was as it is universally given. Presumably, the male stock had originally borne the name Brillat, to which Savarin had been added as a sort of quartering, as with thousands of such bourgeois designations. Berchoux's sprightly poem is said to have been published in 1801, although Mr. Ellwanger must be familiar with the fact that it went through three editions in 1800. But probably at the moment of writing the sentence he had in mind some statement that it appeared in the first year of the nineteenth century. The most celebrated of all taverns, Aux Trois Frères Provençaux, is, on page 213, called "The Provincial Brothers," as if they were *provinciaux*. The story about the knighting of the sirloin by Charles II. is given without any warning against the ridiculous derivation of a word in use in English, as Wedgwood shows, from the time of Henry VI., and still older in French. Of course, the prank may have been actually played by Charles II., but it is more likely to be fabulous. On page 29, Cælius Apicius, the writer of the cook-book, is spoken of in immediate juxtaposition to the famous Marcus Gabius Apicius, in such a way (both being called simply Apicius) as to convey the idea that they are one person. Further on (p. 41), the relation of the one to the other is correctly explained. Nicomedes is called King of the Babylonians, instead of King of Bithynia. The Greek cocotte Barsine appears as Bariné, as if she were a hetaira of Paris. The early Greeks are said to have been in the habit of taking four regular meals a day; but another statement about them is eminently true; namely, on page 9 we read: "Coffee, of very remote use in Abyssinia, was unknown to the early Greeks and Romans." These are merely a small selection from the illustrations we have noted of the kind of accuracy of the work.

The volume is a very beautiful and tasteful one, printed with Caslon-like type and the blackest ink, upon paper which, though calendared, is not too heavy. There are some three-dozen charming illustrations reproduced from old prints, with delightful vignettes and ornaments. It is so sumptuous that when one finds it entertaining and instructive enough to be well worth having in any dress, one is quite taken by surprise.

## NOVELS, AND NO END.

*Jethro Bacon, and the Weaker Sex.* By F. J. Stimson. Charles Scribner's Sons.

*The Diary of a Saint.* By Arlo Bates. Houghton, Mifflin & Co.

*John Gayther's Garden*, and the Stories Told Therein. By Frank R. Stockton. Charles Scribner's Sons.

*The Housewives of Edenrise.* By Florence Popham. D. Appleton & Co.

*An Old Country-house.* By Richard Le Gallienne. Illustrated by Elizabeth Shippen Green. Harper & Brothers.

*The Biography of a Prairie Girl.* By Eleanor Gates. The Century Co.

Mr. Stimson rightly names his two stories "Studies of New England Strength of Character." Possibly he is weary of New England's cinnamon roses and codfish. At all events, if there be any readers on whom this literary health food has palled, they have here a chance to see what a passionate pilgrim for material may find in Boston and on Cape Cod, of Balzac-like situation and darkly melodramatic episode. Tragedy suits the lonely sand dunes, and there we seem to be at home with her. But Mr. Stimson has further domesticated the grim Muse within the white gates and behind the green blinds of New England, with sordidness and sin as her handmaidens, even as they flourish in tales of the Latin Quarter. In the second story, the city surroundings take away in part the surprised shock imparted by the powers of darkness. Against the background of slums and crime stand out radiantly the characters of the skipper parson and the hero woman. This is a bearable tragedy. Both are of unmistakable power; but the story of Jethro Bacon, from its very nearness to Nature's open air and its intrusion on ground possessing other associations, weighs like lead on the consciousness, which yet perforce acknowledges the harsh, painful truth of the picture.

A further proof that New England is decidedly emerging from her gingham pinafore days in fiction is afforded by Arlo Bates's new story. Behold herein a frankly agnostic heroine, the child of parents whose agnosticism was not negative but militant. The iron-bound theologies that surround Ruth Privet in her country town are by her own admission out of date in cities; but Tuskamuck still held to the old isms and horrors, and many of Ruth's experiences led her into puzzling encounter with them. The motive of the story is the portrayal of the saintliness that may abide in a woman who is at once unselfish (almost to the point of miracle), large-hearted, clever, well bred, full of humor, and free from entangling alliances with all revealed religion. Her year's experiences with herself and her neighbors, good and bad, make an interesting story. With all her sweetness and breadth, she has the illogic of her logical convictions, as when she says of prayer: "I wondered if I should be happier if I could share this belief in the power of men to move the unseen by supplication, but I reflected that this would imply the continual discomfort of believing in invisible beings who would do me harm unless properly placated, and I was glad to be as I am." Here is surely an undistributed middle. The triumph of Ruth's convictions would be greater artistically and theologically were there, as pendant to her portrait, even one character who should possess both religion and charity.

Many of the stories in Mr. Stockton's volume recall the old-time fillip of surprise and conjecture and the sense of a new sense, that he ushered into fiction. The diver who breathes for two hours the sixteenth-century air of a submerged galleon and comes up "as a man who swashbuckles," is an instance. All Frank Stockton's lovers and lamenters will read the book with increased love and lamenting. "The stories are all told. The winter has come," is his own fitly spoken good-by to the garden where the story-tellers met.

The tale of an English village, its matrons, maids, and the siren who rents the vacant house, is told glibly and with some originality in 'The Housewives of Edenrise,' a place whose society is described by the siren as consisting of the "old-fashioned, sitting-hen kind of woman, their bald and highly respectable husbands, enlivened by one milk-and-water curate." The usual incidents of such a community are related with a fair amount of humor, and now and then a pungent epigram. It must be added that some discussion of intimate topics goes on which might with advantage have taken place behind closed doors. The book is too serious to be called flippant, too full of common sense to be called silly, yet not so clever as to inebriate, and hardly so wholesome as to cheer.

A very beautiful volume as to printing, outer dress, and illustrations is Mr. Le Gallienne's, and an altogether charming one as to contents. Lovers of old houses, old gardens, old books, old sundials, and lovers of lovers old and young, may spend a fragrant hour among its pages. The chapter on "Perdita's Simple Cupboard" is a pure delight. Think of her among her books on herbs "turning the leaves—I had almost said petals—of a precious first edition"! The closing chapter, showing how Perdita kept Christmas with old observances of carols, Yule log, and the gigantic pie trundled about the table and then from cottage door to door, gives the volume a seasonable

aspect. But it has nature worship and poetry for all the year round, with enough of human interest to serve as string for the pearls.

'The Biography of a Prairie Girl' is undeniably strong and striking as a picture of life on a Dakota farm. Reading it, one sees the prairie, the corn furrows, the cottonwoods, and enters upon the hazards, glooms, and occasional pleasures of farming in a new country where Indians may steal the horses, and gophers will certainly steal the corn. The little heroine, strapped on a pinto at four and a half and set to herding cattle, grows visibly to girlhood, where we leave her, in pages full of the adventure and risk that make daily life on the plains. An engaging little puss she is, often in difficulties and dangers of her own making, forgetting to do her agricultural duties while she lies dreaming on the grass, passionately loving her pets, be they pony or tamed badger, wandering through the strange ways of a life that makes contradictory demands of youth and age on all who live it; a quaint little figure, prematurely old in out-of-door learning, pathetically ignorant of childhood's pleasures. The story is told in a singular way, with a plethora of adjectives, and a use throughout of paraphrase to the exclusion of all names; as, "The little girl," "The biggest brother," etc. We discern no advantage in this affectation, and could wish that the whole tale were more simply told, with less of what children call "thick part," and more alleviation in the shape of conversation. But the lights and shades of Western farm living could hardly have a more graphic showing than in this story of a child, which yet is not for children.

---

*Scottish History and Life.* Glasgow: James MacLehose & Sons; New York: The Macmillan Co. 1902.

Buckle, in a celebrated but libellous passage, taxes the Scotch with the backwardness of their civilization. Not only did "the ferocious Highlanders live entirely by plunder," but the burghers of the Lowlands differed little from savages until a comparatively late date. Down to the seventeenth century, "no glass was manufactured in Scotland, neither was any soap made there. Even the higher class of citizens would have deemed windows absurd in their wretched abodes; and as they were alike filthy in their persons as in their houses, the demand for soap was too small to induce any one to attempt its manufacture."

We shall not go so far as to assert that all the allegations of Buckle are disproved by the book before us, but we will say that it furnishes a more attractive picture of Scottish life and culture than is afforded by the second chapter of his second volume. In a word, this very handsome volume is a memorial of the Glasgow Exhibition. Historical collections of great interest and value were there brought together for the sake of illustrating different stages of the national development. But objects thus gathered are quickly dispersed, and can be reassembled only for a great occasion. Hence it was decided to utilize this material "in telling the story of Scottish History, and showing what the people were who made it." The editor, Mr. James Paton, also states "that no effort has been spared to make this volume both a vivid and an accurate picture of Scottish History and Life."

In describing the nature of the contents, we must divide honors evenly between the four hundred and thirty-seven illustrations and the twenty-three chapters which they serve to adorn. The co-operative plan has been followed, and each separate aspect of history or culture is treated by a specialist of recognized authority. Dr. D. H. Fleming and Mr. H. G. Graham are the only contributors who furnish more than a single chapter, and the table of contents presents nearly a score of names. According to another division, history receives eleven chapters, and the same number is devoted to various aspects of the national life; while, in conclusion, Mr. William Young furnishes such memorials of Glasgow as explain the growth of the town at which the exhibition was held.

Regarding the illustrations, it may be said that they bear all the marks of authenticity. Moreover, the choice of subjects is excellent, and good modes of reproduction have been employed. Most of the full-page plates are executed in half-tone, but there are also some fine photogravures—for example, the frontispiece, which represents the Darnley Cenotaph, and a striking portrait of Dundee. In every case the mechanical work is good of its kind. If we were seeking for a standard of comparison, we should suggest that the illustrations of this book agree with the text, and explain it in much the same way that the illustrations chosen by Mrs. J. R. Green and Miss Kate Norgate add to Green's 'History of England.' Objects like the Ruthwell cross, the brooch of Lorne, the oak cradle of Queen Mary, and the wine glasses of the Jacobites are shown in great profusion; almost all the leading politicians and notables are represented either by portrait or autograph; town seals and loving-cups, dirks and broadswords, pages from chronicles and illuminated missals, appear with regularity at the proper places. We do not praise the work too highly when we say that good talent accompanies good scholarship throughout.

Writers and illustrators have both done their subject justice, but, after all, it cannot be affirmed that the Scotland of the Middle Ages or of the Stuart régime was in any special sense a home of the arts. Poverty, turbulence, and isolation were barriers which the incipient genius of the north could not well break through. The general conditions were in some respects similar to those which prevailed among the Alps, though on the whole the Scotch made a better use of their opportunity than did the Swiss. Where so much was borrowed, we need not pause to discriminate between French friends and English foes. It is more candid as well as less harsh to say that, despite the hostility of nature and the fierceness of their chieftains, the Scotch did recognize a difference between refinement and barbarism. Their pursuit of beauty and elegance was not wholly successful, but the Lowlander at least had grasped the idea that decency is better than squalor before the day when James VI. mounted the English throne.

The historical chapters of this volume, besides being well written, are marked off from the generality of such sketches by their closeness of contact with the illustrations. It is, however, to the chapters on social life that most readers will turn when they begin to examine the text closely. Studies like the editor's paper on Scottish towns, Mr. Kerr's account of the national games, and Dr. Murray's description of the universities, are more likely to fill a gap than is the best résumé of political history. The mention of this last subject brings to mind a shortcoming of the Scottish universities upon which Dr. Murray dwells with great earnestness. Notwithstanding their belief in education and the sacrifices that they make on its behalf, the Scotch do not seem even at the present day to entertain much affection for their universities. The students see little of each other and have few interests in common. According to Dr. Murray, "the student life of the ordinary Scottish undergraduate, at least in the large universities, is a dull one; the university does nothing for him as a student but worry him with lectures and examinations, and does nothing for him after he leaves her care except to keep his name upon the books." Such is the condition. Of equal significance is the remedy which Dr. Murray proposes, namely, an adoption of American methods, and the development of a class feeling. Should his suggestion be heeded, Scotland may receive from the United States, besides Mr. Carnegie's money, the benefits which are represented by cane rushes, Greek-letter societies, and amphitheatrical football games! Speaking seriously, our college life possesses attractions which are unknown at Edinburgh, Glasgow, and Aberdeen. Perhaps we shall do well to recall this fact in moments when we are dismayed by certain ebullitions of undergraduate energy.

---

*New Amsterdam and its People.* By J. H. Innes. Charles Scribner's Sons. 1902.

The various contributors to the voluminous literature concerning the history of the city of New York have treated the subject in very various ways and from widely different points of view. John Fiske, with brilliant generalizations and philosophic inferences, regards it as an integral part of the country's colonial history; Mrs. Lamb entertains us with sprightly and gossiping relations of families and their changes; in the *Goede Vrouw* of Manhattan Mrs. Van Rensselaer paints the inner life and domestic virtues of the Dutch matrons. These sketches are fitly supplemented by her elaborate tables of genealogies, separately published, which have proved of much service for the biographies of families of later date, and useful to conveyancers for tracing title to real property. Besides these more serious works, many clever monographs exist shedding light on special periods or persons in the town's story.

The present author conducts his account in a quite novel way, from the first beginning of separate streets and buildings through their connection with the succession of persons who have occupied them, illustrating these by noted characters, with personal sketches. This method, though fragmentary, brings out detached points of lively interest. The period within which the author chooses to confine his researches—that between the discovery of the islands and the final surrender of its

dominion to the English in 1674—does not preclude scope for much interesting variety of treatment. True, the public events recorded are of narrow range and slight importance. The building of forts, palisades, a church, and public warehouses, the purchase of the island from the Indians, wars with the savages and the intruding Swedes, the creation of the class of patroons, and the establishment of the Boweries, and city charters, comprise the public events marking that space of time. But the great world across the sea seethed with a ferment that reacted upon this insignificant nook of earth. The Thirty Years' War, the cruel religious persecutions, and the upsetting of dynasties involved in their sweep these far-away lands, and threw upon their shores a mingled and adventurous population.

It is an error, then, to suppose, as is generally believed, that the early settlers of Manhattan, though mainly Dutch, were purely so. Almost all foreign civilized nations were represented among the immigrants to this island in the half century following its first settlement. The first private building described is the White Horse Tavern, in the lower part of what is now Broad Street, occupied by a French settler, Philip Gerard, or Geraerdy, as his Dutch neighbors called him. The name of the Delancys, refugees after the revocation of the Edict of Nantes, early appears in holders of a great estate along the Bowery, which would have made them, had it not been confiscated at the American Revolution, almost the richest landholders of that date. The Scotch line of the Livingstons was planted here early, and appears about 1670 as wealthy and politically eminent. Another striking personage described in this volume among the later colonists was the Scotchman William Paterson, adventurer and financier, celebrated by Macaulay, and the projector of the Bank of England. He lived some years at New Amsterdam and at Albany, involved himself in noted quarrels, and at last returned to London, leaving his reputation and even his identity an historical puzzle. The Scotch line of Stirling, settled in New Jersey, and the French Jays, in Westchester, N. Y., soon took rank among the chief citizens of the young community.

Through such mingling of alien races, busy in divers pursuits, the town of New Amsterdam, at the time of its final surrender to the English in 1674, had, under the guidance of Dutch polity and thrift, grown to be a truly cosmopolitan community, quite justifying the author's description of it as a people not greatly different in its nature, however narrower in range, from the population which throngs the streets of Manhattan in this year of grace 1902.

Pursuing his plan of tracing the growth of this people through the slow building-up of its separate habitations, the author does not need to expand his treatment of his theme from the time when the few settlers plodded their way through muddy lanes over rough cobblestones to this era of stately parks, sky-piercing hives of industry, and avenues disembowelled by subways. The plain homes of traders, artisans, sailors, and farmers supply a sufficient field of human interest and progress. Localities suggest their creators and occupants. The record of many scores of such growing erections suggests scores of names, linked easily and naturally with their development, and in these little biographies is gathered a mine of incident and adventure. This treatment of the subject baffles the reviewer who seeks a clue or a principle in the multiform growth of a microcosm, but it is perhaps the more entertaining for being discontinuous and fragmentary.

The text is enlivened by some forty well-chosen illustrations, mostly engraved from diagrams and authentic official maps. An apt preface, a full index, and clear type leave nothing to be desired in the make-up of the volume.

---

*Recollections of a Player.* By J. H. Stoddart. The Century Co. 1902.

These autobiographical notes of James H. Stoddart are chiefly valuable as a revelation of the man himself, and an illustration of the process by which good actors were made out of raw material in the old days before the stage had been converted by commercial speculators into an emporium for the display of tailors' models and realistic representations of police-court incidents. The author must be one of the oldest players still in harness, but is not to be accounted among those veterans who lag superfluous. On the contrary, he is, happily, in full possession of his bodily and mental faculties, and only recently won, in "The Bonnie Brier Bush," the crowning triumph of his career. For nearly fifty years he has occupied a most honorable position in the American Theatre, playing successfully many prominent parts, of the most diversified character, in old and modern comedy and the romantic drama, and to-day furnishes one of the most conspicuous examples of thorough competency to be found in the ranks of his profession. His story, reduced to its simplest elements, is a record of indefatigable industry, intense conscientiousness, and rare modesty. Interesting as it is on account of its complete naturalness and its manifestations of a sweet, genuine, and generous disposition, it contains nothing that is startling and but little that can be quoted. From the spirit of artistic jealousy it is absolutely free. It is full of the most kindly and ungrudging appreciation of the many distinguished actors with whom at various times the writer has been associated, but offers no word of unfavorable criticism or malicious comment Of his own successes he speaks gratefully but doubtfully, while lavish in the praise of his associates.

Born in Yorkshire, in October, 1827, the son of a provincial actor, he began acting while yet a child, and passed the long years of his novitiate as a member of the stock companies of various theatres in Scotland, Yorkshire, and Liverpool, earning a mere pittance by acting innumerable small characters of every description, and gradually working his way up to the position of leading man in provincial theatres of the first rank. It was in 1854 that he came to this country and secured an engagement with the elder Wallack, with whose brilliant company he was associated for many seasons. Later on he was a prominent member of the memorable body of players collected by A. M. Palmer at the Union Square Theatre, contributing in no small degree to some of the most notable successes achieved in romantic melodrama, and establishing for himself a reputation which extended from New York to California. Nor were his triumphs limited to one line of character. Although an actor of decided mannerisms and a man of utterly undisguisable personality, his intelligence and his training enabled him to exhibit a true versatility in the broadly comic Mark Meddle, the tigerish Père Michel, and the deeply pathetic, unhappy father in "Saints and Sinners." In all these and many other parts the habitual gestures of the man were so dominated by the informing spirit of the trained actor that there was no confusion of identity.

It may be noted here that there are many delusions, common to both actors and critics, concerning the meaning of versatility—at all events in the theatrical sense of the word. For instance, there is a prevalent idea that it relates chiefly, or largely, to externals. Actors skilled in the use of wigs, paint, paddings, and costumes for the transformation of their bodies, are constantly credited with the versatility of a Proteus, although in reality they never offer any other personality than their own. Other actors are reputed versatile because their own individuality is so weak and colorless that it seems to be equally well suited to any character they may undertake. Even so veteran an observer as Mr. Stoddart is not quite clear on this subject. He is inclined to undervalue versatility, and even to regard it as an obstacle to histrionic success. He quotes the case of an actor who played everything, and was always good, yet never made a mark in his profession. This player, doubtless, was lacking in character and mentality, and so never amounted to anything more than a pliant, agreeable, uninteresting nonentity. In bodily aspect all Mr. Stoddart's characters resemble each other closely, but in spirit they are widely different. Herein is manifested the intellectual versatility that counts, and this is a gift with which Mr. Stoddart is highly endowed, although he does not appear to be aware of it.

His modesty, indeed, has prevented him from doing himself full justice in many ways. In his long and active life he must have accumulated rich funds of experience and anecdote, but he does not draw upon either, rarely digressing from the plain record of his life, except to descant upon the abilities of his associates, few of whom were comparable with himself. In this respect the book is a disappointment, but it is very pleasant to find in an old actor a heart so fresh and genial, so unspoiled by success or disappointment, so cordial towards aspiring juniors, so entirely free from envy or suspicion. May he be long preserved to the stage which he adorns.

---

*How to Sing.* By Lilli Lehmann. The Macmillan Co. Pp. 281.

Mr. Richard Aldrich's accurate and readable translation of Lilli Lehmann's book on singing appears simultaneously with the original German, and will be cordially welcomed by thousands of students and lovers of music. The German title of the book—'Meine Gesangskunst' (My Art of Song)—indicates one of its principal charms. It is a sort of autobiographic description of the processes by which the author herself learned to sing, and at every point her own experiences illustrate and enforce the rules given by her to singers

in regard to what they should do and what they should avoid. Those who are not students of the vocal art will be interested in her remarks on famous vocalists—Patti, Melba, Sembrich, Niemann, Betz, Wachtel, Silva. There are numerous pictures to illustrate the physiological side of singing; and the minuteness of some of her directions is instanced by the fact that she requires nearly a page of text and a diagram in two colors to show how she sings the word *Fräulein*. The author tells how she studied the rôle of Isolde, and a chapter is devoted to her method of interpreting three of the most popular songs in her repertory—Schumann's "Der Nussbaum," Brahms's "Feldeinsamkeit," and Schubert's "Erlking."

Mme. Lehmann is severe on the voice factories which turn out singers in two years, and contrasts this state of affairs (fostered by ignorant or unscrupulous managers) with the time when an eight-year course was required at the conservatories. She herself was so lucky as to have a mother who could sing, and who was her first teacher. She began humbly, in operetta, and gradually became one of the leading grand-opera singers of her time, differing from most others in not being a narrow specialist, but an expert in Italian florid song as well as in the Wagnerian drama. This versatility makes her ideally qualified to pose as a teacher for singers in general. Beginners who have difficulty with their breath will be consoled on reading that the writer herself was very short of breath by nature, and will be interested in her method of overcoming this defect. Singers of more mature years will eagerly read what she has to say about the secret of keeping the voice young. The hygienic hints alone would make the book indispensable to every singer; they are all based on personal experience. One of her topics is the reason why artists like to sing Wagner. There are also remarks on the duration of concerts, on applause, on the behavior of audiences, and many other things of interest to music-lovers. While holding that "it is not enough to sing well; one must also know how one does it," Mme. Lehmann admits that there are exceptions. Patti could give no explanation of her art, but answered all questions concerning it with an "Ah, je n'en sais rien."

---

*Daniel Boone.* By Reuben Gold Thwaites. Illustrated. D. Appleton & Co. 1902.

Daniel Boone (1734-1820) was an extreme type of our foremost frontiersmen. Born in eastern Pennsylvania, he moved far West with various halts, chiefly in Kentucky, and, keeping on the outer fringe, was in Spanish service on the Missouri while it was still Spanish, his hunts extending far up that river. As an omnivorous Nimrod, buffaloes were not too large nor bees too small for his chase, and he was of that class who largely return to the hunting stage in social development. A capital shot, he easily believed that both his pleasure and his profit lay in the same line, and that he could best earn his bread as a hunter. Thus his ruling passion was a lifelong pilgrimage to happy hunting-grounds. He became as migratory as Indians or game wheresoever furs could be discovered that were lightest in weight and heaviest in worth, for markets were distant and transport at best was by pack-horse. To Indians, who were dragons guarding the golden fleece he was after, he became an Indian. He out-Indianed them, and was too wily for their wiles. A chief had made him captive and purposed to burn him, yet, in fact, adopted him as his son.

His strange career has been chronicled in a dozen books, which all have a Robinson Crusoe charm, and about his hair-breadth 'scapes clouds of legends or lies have gathered, which a sketch like the present, the outcome of long and earnest search, was needed to clear away. The truth was romantic enough. This latest publication is first to show the exact date of Boone's birth and many another suggestive fact. It shows us also for the first time Boone's best portrait, and many significant autographs in facsimile, such as pages of field-notes of surveys and familiar letters, photographs of his last home, his monument at the capital of Kentucky, when he had been reburied there, with other realistic, not imaginary, scenes. It omits many irrelevant matters with which some preceding narratives had been padded, and defines Boone's place among Western pioneers in the light of manuscripts which can be found only in the charge of its author.

Having both hands full of biographic details, there was reason for the Wisconsin secretary to open his little finger. One letter, however, we miss more than we should some of his pages. It is an appeal to Virginia for help just after a defeat by British-aided Indians, written when Boone's military rank was highest, and brings to view back-countrymen safeguarding the Revolutionary back door. This letter is found in Peck (p. 131), whose painstaking production, derived in part from personal interviews with Boone himself, and the early Draper collections as well, would remain the standard biography but for the improvements it was reserved for Mr. Thwaites to add. Few books have so little need as has this finality to ask pardon for being born.

## BOOKS OF THE WEEK.

A Doffed Coronet: A True Story. Harpers. $2.25.
Andersen, R. Jack Champney: A Story for Boys. Philadelphia; George W. Jacobs & Co.
Aristotle's Psychology: A Treatise on the Principle of Life. Translated by W. A. Hammond. London: Swan Sonnenschein & Co.; New York: Macmillan.
A Voice on the Wind, and Other Poems. Madison Caweln. Louisville: John P. Morton & Co. $1.
Bacon, E. M. The Hudson River, from Ocean to Source. Historical, Legendary, Picturesque. Illustrated. G. P. Putnam's Sons. $4.50.
Bailey, Florence M. Handbook of Birds of the Western United States. Boston: Houghton, Mifflin & Co. $3.50.
Baker, Mrs. L. A. A Maid of Mettle. Philadelphia: George W. Jacobs & Co.
Barine, Arvède. La Grande Mademoiselle, 1627-1652. Authorized English version by Helen E. Meyer. G. P. Putnam's Sons.
Barry, Rev. W. The Papal Monarchy. (Story of the Nations.) G. P. Putnam's Sons. $1.35.
Bayne, S. G. On an Irish Jaunting-Car through Donegal and Connemara. Illustrated. Harpers. $1.25.
Bell, Mrs. Arthur. Lives and Legends of the Great Hermits and Fathers of the Church, with Other Contemporary Saints. London: George Bell & Sons; New York: Macmillan. $4.50.
Betham-Edwards. East of Paris: Sketches in the Gâtinais, Bourbonnais, and Champagne. E. P. Dutton & Co. $2.50.
Bicknell, Ethel E. Praise of the Dog: An Anthology. E. P. Dutton & Co. $1.50.
Bjerregard, C. H. A. Sufi Interpretations of the Quatrains of Omar Khayyâm and FitzGerald. New York: J. F. Taylor & Co. $5.
Blanchard, Amy E. Little Miss Oddity. Philadelphia: George W. Jacobs & Co.
Burgess, Gelett. The Romance of the Commonplace. San Francisco: Elder & Shepard.
Burr, W. H. Ancient and Modern Engineering and the Isthmian Canal. John Wiley & Sons. $3.50.
Canfield, W. W. Legends of the Iroquois. A. Wessels Co. $2.50.
Carruth, Frances W. Fictional Rambles in and about Boston. McClure, Phillips & Co.
Chesterton, G. K. Twelve Types. London: Arthur L. Humphreys.
Clouston, J. S. The Adventures of M. d'Haricot. Harpers. $1.50.
Comrie, Margaret S. A Loyal Huguenot Maid. Philadelphia: Geo. W. Jacobs & Co.
Crawford, F. M. Ave Roma Immortalis: Studies from the Chronicles of Rome. New ed. Macmillan.
Creswick, Paul. Hasting the Pirate. London: Ernest Nister; New York: E. P. Dutton & Co. $1.50.
Creswick, Paul. Robin Hood and his Adventures. London: Ernest Nister; New York: E. P. Dutton & Co. $2.50.
Crosby, Ernest. Swords and Plowshares. Funk & Wagnall Co. $1.
Dale, Lucy. The Principles of English Constitutional History. Longmans, Green & Co. $1.50.
Dellenbaugh, F. S. The Romance of the Colorado River. G. P. Putnam's Sons. $3.50.
Dickens, Charles. A Child's History of England. Wth Many Illustrations by Patten Wilson. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. $2.50.
Douglas, Amanda M. A Sherburne Quest. Dodd, Mead & Co. 90 cents.
Dugmore, A. R. Nature and the Camera. Doubleday, Page & Co. $1.35.
Dumas, Alexander. Master Adam, the Calabrian. Translated by H. A. Spurr. R. F. Fenno & Co. $1.
Dunn, E. B. The Weather and Practical Methods of Forecasting It. Dodd, Mead & Co. $1.60.
Dunne, P. F. Observations by Mr. Dooley. R. H. Russell.
Ellis, J. B. The Red Box Clue. Fleming H. Revell Co. 75 cents.
Farrar, F. W. Eric; or, Little by Little. E. P. Dutton & Co. $1.50.
Fuller, A. J. Dutton's Holiday Annual for 1903. London: Ernest Nister; New York: E. P. Dutton. $1.25.
Fuller, A. J. Wee Folk's Annual. London: Ernest Nister; New York: E. P. Dutton & Co. $1.25.
Gale, E. O. Reminiscences of Early Chicago. Fleming H. Revell Co. $2.
Gannon, W. Mother Goose's Nursery Rhymes, Tales, and Jingles. Hurst & Co.
Gorton, D. A. Ethics, Civil and Political. G. P. Putnam's Sons. $1.50.
Hamilton, S. M. Letters to Washington, and Accompanying Papers. Vol. V. 1774, 1775. General Index. Boston: Houghton, Mifflin & Co. $5.
Hayens, H. One of the Red Spirits: A Story of Garibaldi's Men. Philadelphia: Geo. W. Jacobs & Co.
Haynie, Henry. Paris, Past and Present. 2 vols. Frederick A. Stokes Co. $4.
Hibben, Prof. J. G. Hegel's Logic: An Essay in Interpretation. Scribners. $1.25.
Index-Catalogue of the Library of the Surgeon-General's Office, United States Army, Second Series, Vol. VII. Washington: Government Printing Office.
Ireland, W. H. Napoleon Anecdotes. H. M. Caldwell & Co.
Irwin, Wallace. The Love Sonnets of a Hoodlum. San Francisco: Elder & Shepard.
Jackson, Gabrielle E. Doughnuts and Diplomas. Philadelphia: Henry Altemus Co. $1.
Jones, I. L. The Richer—The Poorer. The Fiction Publishing Company.
Lanier, Sidney. Shakspere and his Forerunners: Studies in Elizabethan Poetry and its Development from Early English. 2 vols. Illustrated. Doubleday, Page & Co. $10.
Lawrence, Rev. W. Roger Wolcott. Boston: Houghton, Mifflin & Co. $1.
Lee, Gerald S. The Lost Art of Reading. G. P. Putnam's Sons.
Lehfeldt, R. A. A Text-Book of Physics. London: Edward Arnold & Co.; New York: Longmans, Green & Co. $2.
Leigh, Lennard. Bridge Whist: How to Play it. Rev. ed. Philadelphia: Henry T. Coates & Co. $1.
Loti, Pierre. The Last Days of Pekin. Translated by Myrta L. Jones. Boston: Little, Brown & Co.
Lovell, Isabel. Stories in Stone from the Roman Forum. Macmillan.
Lummis, C. F. Out West: A Magazine of the Old Pacific and the New. Bound Vol. XVI. Los Angeles: C. F. Lummis.
Major, Charles, The Bears of Blue River. Macmillan. $1.50.
Mallory, J. A. Compiled Statutes of the United States, 1901. 3 vols. St. Paul: West Pub. Co.
Mann, W. J. America in its Relation to the Great Epochs of History. Boston: Little, Brown & Co.
Marvin, F. R. Flowers of Song from Many Lands. Troy: Pafraets Book Co. $3.
Mathews, Alfred. Ohio and her Western Reserve. D. Appleton & Co.
Maxwell, Herbert. George Romney. (The Makers of British Art.) London: The Walter Scott Publishing Co.; New York: Scribners. $1.25.
Miller, Joaquin. Complete Poetical Works. Rev. ed. San Francisco: The Whittaker & Ray Co. $2.50.
Moore, C. C. Denslow's Night before Christmas. G. W. Dillingham Co.
Musings without Method: A Record of 1900-'01. By Annalist. Edinburgh: Blackwood; New York: McClure, Phillips & Co.
Nesbit, E.; Molesworth, L., and Others. The Rosebud Series. (Juvenile stories.) 4 vols. London: Ernest Nister; New York: E. P. Dutton & Co. $1.25.
Ober, F. A. For Prey and Spoils. Philadelphia: Henry Altemus Co. $1.
Payne, W. M. Various Views. Chicago: A. C. McClurg & Co.
Perkins, Clara C. French Cathedrals and Châteaux. 2 vols. Boston: Knight & Millet. $4.
Peters, Dr. Carl. The Eldorado of the Ancients. London: C. Arthur Pearson; New York: E. P. Dutton & Co. $5.
Platt, C. T. Pitmanic Shorthand Instructor. Am. Book Co. $1.20.
Potter, Bishop Henry C. The Citizen in his Relation to the Industrial Situation. Charles Scribner's Sons.
Prichard, H. H. Through the Heart of Patagonia. Illustrated. D. Appleton & Co.
Reed, Fanny. Reminiscences, Musical and Other. Illustrated. Boston: Knight & Millet.

Ricci, C. Pintoricchio. His Life, Work, and Time. London: William Heinemann; Philadelphia: Lippincott.
Riis, Jacob A. The Battle with the Slum. The Macmillan Co.
Robins, Edward. Chasing an Iron Horse. Philadelphia: George W. Jacobs & Co.
Rodd, Rennell. Myrtle and Oak. Boston: Forbes & Co. $1.
Roscoe, E. S. Robert Harley, Earl of Oxford. G. P. Putnam's Sons. $2.50.
Ross, Martin, and Summerville, C. E. A Patrick's Day Hunt. E. P. Dutton & Co.
Segall, J. B. Corneille and the Spanish Drama. Columbia University Press.
Seth, Prof. A. Man's Place in the Cosmos; nad Other Essays. 2d ed., revised and enlarged. Scribners. $1.50.
Simpson, Samuel. Life of Ulrich Zwingli. The Baker & Taylor Co.
Smith, G. Gregory. Specimens of Middle Scots. Edinburgh: William Blackwood & Sons.
Smith, Norman. Studies in the Cartesian Philosophy. Macmillan. $1.60.
Smollett, Tobias. Commodore Trunnion's Courtship and the Cruise of H. M. S. *Thunder*. Boston: Herbert B. Turner & Co.
Spiller, Gustav. The Mind of Man. The Macmillan Co. $2.75.
Stevenson, R. L. Familiar Studies of Men and Books. New ed. 2 vols. Boston: Herbert B. Turner & Co. $2.50.
Strang, L. C. Plays and Players of the Last Quarter-Century. 2 vols. Boston: L. C. Page & Co. $3.20.
Strong, Isobel, and Osbourne, Lloyd. Memories of Vailima. Scribners.
Sully, James. Essay on Laughter. Longmans, $4.50.
Tabb, John B. Later Lyrics. John Lane.
The Animals' Rebellion. Described by Clifton Bingham and Pictured by G. H. Thompson. London: Ernest Nister; New York: E. P. Dutton & Co. $1.50.
The Bairn Book: (1) The Book of the Zoo, by Walter Copeland; (2) A Book of Shops, by Clara Bridgman. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. $1.25.
The Poetical and Prose Writings of Edward Fitz-Gerald. Vol. 4. (The Variorum and Definitive Edition.) Edited by George Bentham. Doubleday, Page & Co.
The Rosebud Series. (Four very small books for small children.) London: Ernest Nister; New York: E. P. Dutton & Co.
The Rubáiyát of Omar Khayyám, Jr., translated from the Original Bornesi into English Verse by Wallace Irwin. San Francisco: Elder & Shepard.
Thackeray, W. M. The Virginians. 3 vols. Edited by Walter Jerrold, with illustrations by Charles E. Brock. London: Dent; New York: Macmillan. $3.
Tolstoy, Leo. The Death of Ivan Ilyitch, and Other Stories. Translated by Constance Garnett. McClure, Phillips & Co.
Trübner, K. Minerva: Jahrbuch der Gelehrten Welt. 12th year. Strassburg: K. J. Trübner; NewYork: Lemcke & Buechner.
Upson, A. Octaves in an Oxford Garden. New ed. Minneapolis: Edmund D. Brooks.
Webb, Sidney and Beatrice. Problems of Modern Industry. New ed. Longmans, Green & Co. $2.50.
Wharton, Anne H. Social Life in the Early Republic. Illustrated. J. B. Lippincott Co. $3.
Wheelwright, W. B., and Palmer, H. W. A Harvard Alphabet. Illustrated. Cambridge: Harvard Coöperative Society.
Whitaker, E. T. A Course of Modern Analysis. Cambridge (Eng.) University Press; New York: Macmillan.
White, Hervey. Noll and the Fairies. Chicago: H. S. Stone & Co.
Whiting, Lilian. Boston Days. Boston: Little, Brown & Co.
Wiggin, Mrs. K. D. Penelope's Irish Experiences. New ed., illustrated. Boston: Houghton, Mifflin & Co. $2.00.

## ECHOLS' DIFFERENTIAL AND INTEGRAL CALCULUS

An Elementary Text-Book. By Prof. William H. Echols, of the University of Virginia. x+480 pp. 8vo, $2.00 *net.*

This text is designed to meet the needs of the undergraduate work in American universities. The treatment is elementary and clear. The subject is developed continuously and is based on the Law of the Mean Value. The text is divided into two books; Book I. treats Differentiation and Integration of Functions of One Variable, with extensive applications to Geometry; Book II. treats Functions of Two and Three Variables. Examples, geometrical illustrations, and figures abound throughout the text.

## HERTWIG'S MANUAL OF ZOÖLOGY.

From the Fifth German Edition. Translated and edited by Prof. J. S. Kingsley of Tufts College. xi+704 pp. 8vo, $3.00 *net.*

For over ten years Hertwig's Zoölogy has been the leading text-book on the subject in Germany, passing through numerous impressions. The translation has been made with American conditions in mind, the text being edited and in some instances altered to conform to the usage of our colleges, while many illustrations of American forms have been added. Part First of this work, translated by Prof. G. M. Field, under the title *General Principles of Zöology* ($1.60), was issued several years ago by the present publishers and is still kept in print.

# Henry Holt & Co. 29 W. 23d St., New York 378 Wabash Ave., Chicago

# IMPORTANT SCRIBNER BOOKS

THIRD EDITION

## THE de WET BOOK

*is everywhere hailed, on publication, a remarkable narrative*

*The N. Y. Tribune:*

"For REAL, RED-BLOODED interest, commend us to THREE YEARS' WAR, written by CHRISTIAAN RUDOLF DE WET . . . it is the frank outpouring of the mind of the man whom we may call THE NOBLEST ROMAN OF THEM ALL."

In a column editorial, the *New York Evening Post* likens this book to GRANT'S MEMOIRS and compares its author with CROMWELL.

*The Associated Press,* in a London cablegram declares:

"It is perhaps the MOST REMARKABLE BOOK by the MOST REMARKABLE LEADER that any recent war has produced."

"UNIQUE IN MODERN LITERATURE. . . . ONLY A CLASSICAL COMPARISON can do it justice."—*Brooklyn Eagle.*

**THREE YEARS' WAR. By CHRISTIAAN RUDOLF DE WET**

With frontispiece portrait by Sargent, plans, map, etc. $2.50 *net.* (Postage 28 cents.)

"Treats its subjects in a systematic and reasonable way."

Branch Public Library
Rockland St 81 03

# *The* Philippine Islands

## 1493-1803

EXPLORATIONS by early Navigators, descriptions of the Islands and their Peoples, their History, and records of the Catholic Missions, as related in contemporaneous books and manuscripts, showing the political, economic, commercial, and religious conditions of those Islands from their earliest relations with European Nations to the beginning of the nineteenth century.

¶ Translated from the rare originals (Spanish, French, Italian, Latin, etc.), many of which are now published for the first time; edited and annotated by EMMA HELEN BLAIR, A.M., of the State Historical Society of Wisconsin, assistant editor of *The Jesuit Relations and Allied Documents*, and JAMES ALEXANDER ROBERTSON, Ph.B.; with historical introduction and notes by EDWARD GAYLORD BOURNE, Professor of History in Yale University, Chairman of the Historical Manuscripts Commission of the American Historical Association, etc.; and special contributions by well-known scholars and bibliographers. Also a full Bibliography and Analytical Index.

¶ Illustrated with facsimiles of rare and unique originals, manuscripts, maps, portraits, views, etc.

¶ The edition is limited to one thousand numbered and signed sets. Printed in the beautiful Caslon type on Dickinson's hand-made deckled-edged paper. 55 vols. (issued one or two vols. per month until completion; Vol. I. to be published about Jan. 15, 1903), large 8vo, about 325 pages per volume, cloth, uncut, gilt top. Price, $4.00 net per volume.

*The difficulties which confront the people of the United States in the administration of their new insular possessions render this work especially timely and useful. Its chief aims, throughout, are to cast light on the great Philippine problem —by making accessible to the reading public the history of those islands, both religious and secular, and showing the character, customs, and beliefs of the native peoples who inhabit them,—and thereby to furnish in a thorough and scholarly manner and at a reasonable price the sources of Philippine History.*

*"This publication is very highly to be commended, as, in the confused state of current information upon the conditions in our insular dependencies, evidence direct from unimpeachable sources is of the greatest importance. The American people realizes its responsibility, but is at a loss to know what should be done, as so much uncertainty exists as to the conditions."*
—PAUL S. REINSCH, *Professor of Political Science, University of Wisconsin.*

*JUST PUBLISHED.*

**Select Passages from the Introductions to Plato.**

By BENJAMIN JOWETT, Late Master of Balliol College and Professor of Greek in the University of Oxford. Edited by Lewis Campbell, M.A., LL.D. 16mo. Cloth, 85 cents.

"A wish has often been expressed that the late Master of Balliol's Introductions to his translations of the Platonic Dialogues might be published in a separate form. This step has hitherto been prevented by considerations which it is unnecessary to mention here. But it was thought that a select number of significant passages in which Professor Jowett had made Platonic interpretation the vehicle of his own thoughts might be of interest and use to many persons, for whom the examination of five octavo volumes might seem too formidable a task."—*From the Preface.*

**Select Passages from the Theological Writings of Benjamin Jowett.**

Edited by LEWIS CAMPBELL, M. A., LL.D. 16mo. Cloth, 85 cents.

IF YOU WANT TO KNOW ALL ABOUT Ex-Speaker Thomas B. Reed's great library of MODERN ELOQUENCE, and if you would like a handsome portfolio of specimen pages, including fine photogravure illustrations, address the publishers, JOHN D. MORRIS & CO., 1163 Commonwealth Bldg., Philadelphia.

# AN EDUCATIONAL DIRECTORY.

I.—THE NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

# LONGMANS, GREEN, & CO.'S NEW BOOKS

## The Life and Letters
**of the Right Honorable**
## Friedrich Max Müller

**Edited by His Wife.** With 6 full-page Photogravure Illustrations (3 Portraits). In two volumes, large crown 8vo. Vol. I., 548 pages. Vol. II., 501 pages. Net $6.00. By express, $6.50.

**EXTRACT FROM PREFACE.**

"It may be thought that the publication of these two volumes is superfluous after the two works 'Auld Lang Syne' and the 'Autobiography,' written by Max Müller himself But it seemed that something more was wanted to show the innermost character of the real man; for 'Auld Lang Syne' gave recollections of his friends only, 'a small portion of the panorama of life that passed before' his eyes; and the 'Autobiography' is but a fragment, bringing us little beyond the threshold of his career. The plan pursued throughout these volumes has been to let Max Müller's letters and the testimony of friends to his mind and character speak for themselves, whilst the whole is connected by a slight thread of necessary narrative."

## Edward Bowen: a Memoir

With Appendices. By the Rev. the Hon. W. E. Bowen. With three Photogravure Portraits and other Illustrations. 8vo. $5.00.

*The subject of this Memoir was the well-known Assistant-Master at Harrow, and the author of "Harrow Songs."*

## The Principles of Land Defence,
**And Their Application to the Conditions of To-Day.**

By Captain H. F. Thuillier, R. E. With Maps and Plans. 8vo. $5.00.

## Charlotte Brontë, George Eliot, Jane Austen

Studies in Their Works. By Henry H. Bonnell. 8vo, 486 pages. *Net* $2.00. By mail, $2.17.

I. Charlotte Brontë, (a) Her Realism, (b) Her Attitude towards Nature, (c) Her Passion.

II. George Eliot, (a) Her Religion and Philosophy, (b) Her Art, (c) Her Sympathy: Further Considered.

III. Jane Austen, (a) Her Place, (b) Her Wonderful Charm.

## Traces of the Elder Faiths of Ireland
**A FOLKLORE SKETCH**

A Handbook of Irish Pre-Christian Traditions. By W. G. Wood-Martin, M. R. I. A., Author of "The Lake Dwellings of Ireland," etc. 2 vols., 8vo. $12.00.

"Judged as an uncritical collection of material upon Irish folklore, it is both of value and interest. It represents a long labor of compilation, and the bibliography alone (comprising over nine hundred entries) would merit grateful recognition. * * * His work thus furnishes a valuable supplement to the older Irish writings."—*New York Evening Post.*

## Historical Introductions to the "Rolls Series."

By William Stubbs, D.D., formerly Bishop of Oxford, Regius Professor of Modern History in the University. Collected and Edited by Arthur Hassall, M.A., Student, Tutor, and sometime Censor of Christ Church. 8vo. $5.00.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

## The Week.

For a year past wireless telegraphy has been tested at varying distances, and it has been as certain as anything could be that Mr. Marconi's ambition to send full messages across the Atlantic would soon be realized. This anticipation, however, in no way detracts from the interest of the actual experiments of Sunday. About a year ago the inventor succeeded in transmitting the letter S from Cornwall to Newfoundland, but the results were so uncertain and the working of the instrument so irregular that many doubted the conclusiveness of the experiment. On Sunday, however, long messages were exchanged between Cape Breton Island and Cornwall, and the service was apparently as accurate as that of the submarine cables. Mr. Marconi deserves the fullest congratulations for perfecting, in its practical application, an idea of telegraphic communication which has baffled electricians from Morse down. It would be premature to speculate upon the practical and commercial advantages of wireless telegraphy. One might readily imagine applications to the art of naval warfare, for instance, which would be more entertaining than probable. That it will for a long time be anything more than an auxiliary to the cables may well be doubted. Electrical light and power have not made an end of gas and steam. Perhaps the most immediate appeal of this remarkable discovery is to the imagination. An earlier age would have seen magic in the dispersion, through leagues of ocean air, of vibrations, meaningless except when they sweep strung wires to which they are attuned. And in our day Mr. Marconi's experiments seem rather like those mysterious relations which subsist between persons at a distance than like the cold demonstrations of science. Only the regularity and reasonableness of his results assure us that we are not dealing with some strangely bedizened telepathy, but with the proved fact of aërial telegraphy.

---

The arguments against the Newfoundland reciprocity treaty, now in committee of the Senate, have an ancient and fish-like smell. The so-called representatives of the New England fishermen not unnaturally treat the case as if fishing were the sole and original infant American industry. In this they resemble the makers of dolls' eyes and brass jewelry, who have blocked treaties that were undoubtedly for the good of the country as a whole. Nobody can complain because these gentlemen see only their own side of the case, but everybody should attack the sophistry under which these selfish individual claims become the basis of our national law-making. Laws should be framed from the latitude of Washington, not of Lynn, Gloversville, or Gloucester. The specific attack made in the fishermen's behalf against the treaty is that the bargain is an unequal one. Cheap Newfoundland fish will glut our breakfast tables, while self-respecting American families forget that cheap food makes a cheap man. Besides this moral danger, the treaty is said to be mathematically unjust. The free bait which it promises will save our fishermen $4,000, by estimate; the remitted duties on Newfoundland fish will amount to several hundred thousand dollars, by prophecy. Strike a balance and you find just how much we lose by the bargain. But our total dutiable imports from Newfoundland and Labrador in 1901 were $271,000. Clearly, we are not in a position to "concede" several hundred thousands of duties on this trade to anybody. What the Senate should see is, that this is not a question of a few fishing-smacks more or less, but of a cheap food supply for many people; that the value of the right to get bait free from vexatious rules and possible reprisals must be measured in terms of convenience, not of the actual price of squid and capelin; finally, that it is wiser to consider the market which we may gain, than the purely hypothetical duties which we fear to lose.

---

The terms of the Cuban treaty of reciprocity are more liberal than the first report of its contents implied. It grants a reduction of 25 per cent. of the Dingley tariff on Cuban products entering our ports, and it secures for our products exported to Cuba a scale of reductions of 25, 30, and 40 per cent. on specified articles. The summary of the treaty given out at Washington is somewhat confusing in the clause which relates to trade relations of the two contracting parties with other countries, but we judge that it means that the most-favored-nation clause shall not carry to other nations the privileges here enumerated, though it does not estop either of the parties from making treaties of reciprocity with other countries or from changing its tariff in any way. In the event of either country making rates of duty on goods coming from the other different from those of the treaty, the other country is at liberty to abrogate the whole treaty. In other words, it is tentative, not ironclad, and in this respect may disarm the opposition of some Senators who might hesitate to vote for a treaty which could not be amended for a definite number of years. The time fixed for ratification (January 31, 1903) seems very short, especially in view of the possibilities of debate in the Senate, but perhaps this period was named with the concurrence of the Committee on Foreign Relations. At all events, the time can be extended if needful. Everything now depends on the temper of the beet-sugar men. They can kill the treaty for this session if they choose, but they will hardly take the risk of offending public sentiment in that way again. A question more fraught with delay is whether the House will consent to be ignored in the ratification of the treaty. Looking at the precedents in the treaties with Canada and Hawaii, it is hardly possible that the House will allow itself to be snuffed out in this manner.

---

Since the bill reducing to 25 per cent. of the Dingley schedules all duties on imports from the Philippine Islands has passed the House almost without debate, the question becomes pertinent—If it is so easy to knock off 50 per cent. from these sacred schedules to-day, why was it so impossible last winter to concede more than a beggarly 25 per cent? The same grudging tendency appeared in the case of Porto Rico. Everybody, from President McKinley down, agreed that the establishment of free trade was an act of simple justice; but free trade was achieved only by gradual and reluctant process. Congress has not learned to do fair things willingly or generous things generously, and it would be interesting to discover why the representatives of an open-hearted people seem unable to proceed directly upon lines of magnanimity. For this reason the Democrats in the House did well to introduce an alternative bill for free trade, putting the Republican party in the position of a repentant usurer, who gradually brings himself from 100 per cent., through various degrees of extortion, to legal interest. Of course, the reduction of the duties will be so much gain in the way of putting us in a better moral attitude towards our Island wards, but the practical advantage to the Philippine Islands is likely, for a time, at least, to be inconsiderable. They have very few products to send us that we cannot get more advantageously elsewhere, and they do not need facilities for commerce so much as internal peace and security. In this respect, the Senate bill for establishing the gold standard in the Philippines is much more to the point.

---

President Schurman continues to stand up and be counted in favor of Philippine independence. He explained his presence at Cooper Union, where he addressed a large audience on Sunday evening, by saying that it was owing to

the way in which our motives as to the Philippines are becoming mixed. We went into the islands, he believed, for reasons of humanity. But our reasons for staying there have changed. He was not pressed to explain what the change was, but if he had been he would no doubt have had to say that the desire to exploit the islands for the wealth they are said to contain is the ruling factor in our present policy. Professor Jenks, of President Schurman's own faculty, for instance, is now advocating a system of coolie slavery for the islands. The syndicates which would like to exploit the archipelago are delighted by this, because they see that nothing can be done under existing labor conditions. The same influences were behind the provisions in the Philippines civil-government law of last spring, which made it easy for syndicates to obtain large holdings of land. Immigration from the United States not having taken place as was expected, the influence of the Administration is now being exerted to induce capital to go into the islands. But capital will not be likely to go in as long as men like President Schurman continue to advocate eventual independence and get entire Cooper Union audiences to agree with them that the United States is in the Philippines simply to fit the Filipinos for self-government, President Schurman is doing a most valuable service, and will, we trust, continue to speak out strongly in favor of freedom for the Filipinos.

---

Forefathers' Day gave us the usual amount of perfunctory and negligible speaking, mitigated by banquets. Senator Hoar at Philadelphia described a certain dangerous tendency in American popular thought and public speech, and ex-Attorney-General Griggs, in his address before the New England Society of Orange, illustrated that tendency even while the New England Senator was speaking. At the elbow of either orator the Philippine Banquo was standing. Neither could forget the frightful divergence of our Philippine practice from our New England principles. Senator Hoar deplored the "different meaning" which the American flag had come to have to so many. We hear more about it than ever—more boasting, more protestations, more foolish talk of legislation to prevent the mere cloth of which it is composed from being "desecrated." But for its deeper significance and essential symbolism we have ceased to care as we once did. "We no longer," said Senator Hoar, "speak of it as the symbol of liberty, except coldly and formally; but only as the symbol of power, or of a false, cheap, tinsel glory." While he was yet speaking, confirmation of his words was given. Mr. Griggs at Orange was responding to the toast "Our Flag in the Orient," and was saying, "You were thinking of the Philippines. It is over these that our flag now floats, the emblem of *sole and undisputed sovereignty*." There could not well be a sharper contrast between the idea of America as standing for stark force, and of America as synonymous with liberty.

---

Nor was the chasm which divides the thought of Mr. Griggs from that of Senator Hoar merely verbal. The speech of the ex-Attorney-General breathed a political philosophy whole diameters away from that of the Massachusetts Senator. "Too much attention," said the Jerseyman, referring to the never-ending Philippine debate, "has been given to the general question of forms of government and constitutions." It was "the spirit of the American people" that was the main thing, and it was "humane, sympathetic, altruistic." This reminds us of the bulwark against "centralized despotism" which Justice Brown of the Supreme Court thought he saw in the "principles of natural justice inherent in the Anglo-Saxon character." As we said at the time, the Anglo-Saxon character has, nevertheless, taken precious good care, and spilled a lot of blood, to get its principles written down in binding statute and Constitution. It has always pointed to documentary charters of freedom and monuments of liberty. And it is rather late in the day, simply because we have to forbid the reading of the Declaration of Independence in the Philippines, and to suspend the operation of our Constitution there, to discover that the age-long fight for written guarantees was simply a contest of fools about meaningless forms of government. It is a curious way of glorifying our forefathers to say that all of them who died at Bunker Hill or Gettysburg were giving "too much thought to the question of a form of government"! As for "the American spirit," Senator Hoar is as able to wax enthusiastic about it as Mr. Griggs. Only, to him, it means the deep heart of a people that beats for justice and liberty.

---

Congressman Fowler, Chairman of the Committee on Banking and Currency, introduced last week a new currency bill to take the place of the one reported by his Committee at the last session. The latter has been wisely abandoned, as embracing too many subjects and inviting too many attacks, besides being cumbrous and hard to understand. There was no reason why a measure to grant greater freedom in the issue of circulating notes by national banks should embrace the retirement of the greenbacks, or a provision for branch banks, or a measure for more subsidiary silver coins. However desirable those changes may be in an ideal system, they are not essential to a sound scheme of "assets currency," while they are sure to multiply opposition to the bill as a whole. The new bill is much shorter and simpler, and therefore much easier to pass. It might be made even shorter and simpler than it is. It provides that any national bank may, with the approval of the Comptroller of the Currency, take out for issue and circulation an amount of national-bank notes not exceeding 25 per cent. of its paid-up and unimpaired capital, without depositing United States bonds with the United States Treasury, but upon condition of depositing in the Treasury either gold coin or United States bonds, or both, equal to 5 per cent. of said circulation. This 5 per cent. is to be held as a guarantee fund for the redemption of the notes of failed banks. A tax of one-half per cent. per annum must be paid on all banknotes so issued, and the proceeds of the tax are to be added to the guarantee fund. The 5 per cent. so deposited in the Treasury shall constitute a part of the legal reserve, and the bank must keep a reserve against these notes equal to the legal reserve against deposits. This cannot be considered a burdensome requirement, for although the existing law does not require any cash reserve against circulation, it requires 100 per cent. reserve, or even more, in the form of deposited bonds.

---

Other important features of the measure are those providing for the redemption of the notes. Here the example of the old Suffolk Bank system has been followed in part. Banks are required to redeem their notes at their own counters, and also at one of three financial centres, New York, Chicago, and San Francisco. Banks are to be classified as belonging to particular districts numbered 1, 2, and 3, according to their nearness to the redemption cities, and they are not allowed to pay out any notes except those which are redeemable in their respective districts. All other notes received by them in the course of business must be sent home for redemption. This feature embodies a sound principle, but we can see the chance of a good deal of local bickering on the subject of redemption cities. The bill certainly furnishes a good starting-point for currency reform. Although it comes short of a satisfactory scheme for an elastic currency, it is probably all that Congress will consider favorably at the present time—even more. Indeed, we presume that there is no expectation of passing this bill or any other during the present short session, but it is important to have a really practicable measure on the calendar.

---

The *Congressional Record* for Friday usually reads like a catalogue, for Friday is private pension day. Each proposed beneficiary (who could not get his

pension through the Bureau, and hence has appealed to Congress) is awarded a little paragraph by himself in fine print. There are about twenty such paragraphs on a page, and in the *Record* of December 12 there were twenty pages of this matter. Ordinarily, the passage of 400 private pension bills is as smooth as well-oiled machinery can make it, but on that date there was a slight interruption. This was caused by Mr. Gaines of Tennessee, who asked why so many special pension bills were now necessary.

"At the last session of Congress," said Mr. Gaines, "I asked the gentleman from New Hampshire [Mr. Sulloway] why there were so many of these special acts, and the gentleman from New Hampshire replied that it was because the parties did not get justice at the Pension Bureau; the real meaning of the remark being that the then Commissioner of Pensions, Mr. H. Clay Evans, was not dealing fairly with the proposed pensioners. We were given to understand that when the new Commissioner was appointed, Congress would be relieved from doing the work of that Bureau. I will ask the gentleman from New Hampshire if the trouble still lies at the door of the Commissioner of Pensions?"

To this rather significant inquiry Mr. Sulloway replied: "I understood the gentleman from Tennessee to ask if there had been any change since the Commissioner of Pensions has been changed. That has nothing to do with these bills whatever. I will say that all these matters were adjudicated before the present Commissioner came in." It is obvious that this answer may be taken by Commissioner Ware as an intimation of what is expected of him; but his recent brief submitted to the Attorney-General respecting a case involving the joint resolution of July 1, 1902, may also be taken by Mr. Sulloway as an intimation that the Commissioner intends to have something to say about the policy of his Bureau. It is a good sign, and we sincerely hope that it will be followed by others even more conclusive.

---

There is no more interesting organization in the South to-day than the Texas Farmers' Improvement Society, of which the "Texas Booker Washington," Robert L. Smith, is the head. This coöperative body recently held its seventh annual convention, and the reports made at that meeting should cure a great deal of pessimism in regard to the industrial future of the negro in the South. The society is composed of 3,000 negro farmers, who now own 50,000 acres of land, 8,000 head of cattle, and 7,000 horses and mules. It is waging an aggressive warfare against the crop-mortgage system, is introducing improved methods of farming, takes care of its sick and buries its dead. In his annual address Mr. Smith quoted from Secretary Hay's protest on behalf of the Rumanian Jews, to show his hearers what advantages they possess, and he was able to say: "In Texas we have no race problem, so far as governmental affairs are concerned. Where we are settled and own property, where we have established a reputation as industrious, peaceable, sober, right-thinking citizens, I venture to say that the public conscience would not permit advantage to be taken of us." Commenting on the meeting, the Galveston *Daily News* said:

"One of the most pleasing features of this meeting was the excellent tone and fine common sense displayed in the speeches and addresses. The delegates all seemed to think Texas was the best place this side of Heaven, and that the whites and blacks could and would live together in perfect peace."

---

The hands of those who are opposed to shipping subsidies in the United States will be much strengthened by the report of the select committee of the House of Commons adverse to subsidies in Great Britain. The committee says that subsidies restrict free competition and lead to the formation of shipping rings and federations, and hence should not be granted except for services rendered, and that in the latter case the Government should have the right to fix the maximum rates of freight. The phrase "services rendered" is perhaps rather elastic. Whether it shuts off the proposed subvention to the Cunard Company for the new twenty-three-knot ships to be built with money loaned by the Government, is not quite clear; but it is easy to see that there is room for a lively fight before the British constituencies if that particular subvention is granted and all others are denied. The committee does not attach much importance to the report that the Morgan combination is able to command an undue proportion of the Atlantic carrying trade by reason of its influence with American railway management. The hint is thrown out that it may be expedient for Great Britain to adopt the policy of reciprocity in the matter of coasting trade, and prohibit the carrying of goods between British ports by the ships of nations which forbid their coasting trade to British ships. This is the only suggestion in the report that can be regarded as unfavorable to American ship-owners. We exclude from our coasting trade every foreign craft that floats, and when we annexed Porto Rico we applied the same rule to our trade with her. If England should forbid our ships, when making long voyages, to pick up and drop cargo in British ports, it would make the difference of a great many dollars to our ship-owners. Yet we could not justly complain if she adopted that policy.

---

A British jury's award of damages to the Taff Vale Railway Company for injuries inflicted by a strike and boycott had been foreshadowed by a previous judicial decision asserting the liability of labor unions; but it is a great advantage to have so substantial a verdict as to show that the ordinary sense of Englishmen finds the use of the boycott, or other violent methods in a strike, to be criminal conspiracy. Hereafter there can be no doubt that the English unions are in the fullest sense responsible for their action. Justice Wills, before whom the case was tried, rebuked the defendants for "their perpetual producing of the card of non-responsibility" in a manner "contrary to common law and common sense." This was the voice and tone of our own Judge Gray in the anthracite hearing. He, too, showed that it was absurd and dishonest to say that there was no connection between a strike and subsequent violence because the individual lawbreakers could not be identified with the striking union. The moral of the Taff Vale award plainly is, that fearless judges and clear-headed juries can make old law meet new emergencies. The English are far better off under this extension of the law of conspiracy than they would be with elaborate anti-strike or anti-boycott legislation. Our own relief from the present irresponsibility of labor unions may well come about in this manner. The mere requirement of incorporation would make the unions answerable financially. Probably no further legislation would be necessary.

---

It may well be doubted if the capture of the Humberts will result in any far-reaching political scandal. Their gigantic swindle was not of a kind that permitted confederates, and the chances are that their testimony before the courts will rather expose gulls than knaves in high place. The personal, and we may say the psychological, interest of their arrest far outweighs the political. We are near that thrilling point in a detective story when the plot is to be spun backwards and the mystery explained. We already know how the peasant girl, Mme. Humbert, with or without the aid of her father-in-law, an ex-Minister of Justice, borrowed millions upon the credit of a bogus lawsuit; we know how that rather dull person, Ferdinand Humbert, got a standing in art and letters in Paris, while the whole family of impostors achieved a social position brilliant even for such wealth as theirs. Now we shall be told how Mme. Humbert justified her course to herself, upon what fears and vanities she worked to cover her fraud or advance her notoriety; we are presumably to learn the state of mind of the painters and poets who produced canvases and verses for Ferdinand Humbert to sign; we shall discover what the great folk of Paris thought of their vulgarian hosts, and what the Humberts thought of the great folk of Paris. "The Humbert family had relations in all sorts of circles," says the present Minister of Justice, promising revelations. In this final act of their drama will be found in epitome all the characteristic ambitions of our commercialized social order.

*THE VENEZUELAN CRISIS.*

Mr. Balfour's repudiation of that figment, a "pacific blockade," and his frank declaration that acts of war in Venezuela really constituted war, of which prompt notification would be made, as it has since been made, have resolved an awkward situation. The likelihood of our embroilment has been by so much diminished. Meanwhile, Venezuelan affairs have been debated in the Senate in executive session. Senator Teller is quoted as saying: "The Monroe Doctrine is sufficiently strong for us to use in denying the rights of any European Power to do anything on this continent that we believe is inimical to us and to our peace and safety." That is the definition of the Monroe Doctrine which was made by Daniel Webster in his celebrated speech on the Panama Mission. After pointing out that the general rule of national law is against interference in the transactions of other States, he said that there were exceptions when very grave dangers threatened the existence of one nation from the acts of another towards a third. Then he defined the kind of dangers he had in mind, saying:

> "It is not a slight injury, it is not even a great inconvenience, that makes out a case. There must be danger to our security, or danger, manifest and imminent danger, to our essential rights and our essential interests. . . . Our right to interfere in any such case is but the exercise of the right of reasonable and necessary self-defence."

Thus interpreted, the Doctrine is merely the translation, or adaptation, of a rule as old as ancient Rome and Carthage to the conditions in which we found ourselves in the Presidency of James Monroe. We then said that it would be a menace to our safety if European Powers should transfer their system of monarchical government to the American Continent, or enlarge the boundaries of the same as then existing. That which would have been dangerous to our safety in 1823 might not be so now, but we have interpreted the Doctrine to mean: No new European colonization or conquest on this side of the globe.

Thus far Mr. Teller's definition is in accord with reason and precedent, but if the report of his speech in executive session be correct, he went much beyond Mr. Webster or any other statesman of his period even. He maintained that if a nation is so poor that to enforce certain demands would destroy its independence, we must interfere; also, that "if we know the attack is made under the pretense of getting possession of territory, we must interfere." Any definition of Monroeism which depends upon our "knowing" that the designs of foreign Powers are different from what they avow, leads to a quagmire. It is a quagmire, too, in which the President of the United States may "know" one thing, and any Senator may know the opposite. Moreover, under the Teller definition, it is only necessary for a South American Government to keep itself very poor in order to have the warrant for committing any outrage against the rights of Europeans, since the enforcement of the demands for reparation might destroy its independence. Such definitions of the Doctrine seem better adapted to the needs of a Senator whose reëlection is pending than to the field of general diplomacy, but they serve to show what internal complications we are exposed to when the Venezuelan question is thrust into all pending Senatorial contests.

Upon the heels of this debate came the proposal for arbitration conveyed by Minister Bowen, on behalf of President Castro, to the allies, and their subsequent invitation to President Roosevelt to act as arbitrator of the claims of European governments against Venezuela. This is flattering to our national pride, and ought to be soothing to those who have had their Monroeism ruffled by recent events in South American waters. It is taken in all quarters as proof that the allied Powers have no sinister motive in sending their war-ships to La Guayra, and that they desire nothing but justice as we Americans shall find justice in the case. The reference to our Chief Magistrate disarms everybody on this side of the water, and for that reason alone is most gratifying.

It does not follow, however, that President Roosevelt ought to undertake the duties of arbitrator in the premises. The reasons why he should not are of the strongest. The first is, that there exists a tribunal of nations expressly created and exactly fitted to try such cases. The Hague Conference was a great step in the direction of peace on earth and good will toward men. First, an object of suspicion and even of derision, as having its origin in the breast of a military monarch and autocrat, it failed of its declared purpose of mutual disarmament, but it found the next best thing. If disarmament is ever to become possible, it must be made so by removing the causes of quarrel among nations. To this end the Hague Conference created a tribunal which should be open at all times for deciding what is right and just as between the governments and peoples that might avail themselves of it. This method of settling disputes is still in the experimental stage, but every case that comes before it establishes it more firmly in public opinion as a promoter of human happiness and of the world's progress. Each case so referred commits the participating nations to refer other disputes to it, and puts a kind of reproach upon those which refuse to do so. For this reason, if for no other, we ought to turn the Venezuelan case into that channel. Our influence in the premises is overwhelming, and we ought to use it to strengthen the Hague tribunal in the eyes of mankind.

The Hague tribunal is not exposed to suspicion of any kind. Whatever its decision may be, everybody will believe that it was reached without partiality. We cannot undertake to pass upon the claims against Venezuela without incurring some suspicion of national bias. Moreover, the nature of these claims raises questions of great perplexity—questions that should be determined by lawyers of the highest standing in the different countries which were parties to the Hague Conference, so that the judgment rendered may become a precedent. What kind of private claims may a government take up and press upon another government to the point of war? The practice of nations heretofore has been so various, so divergent, that there is really no law on the subject. Nothing is more needed than a decision which shall be generally accepted. It is hardly possible for one nation to make such a law for others, but it is possible that the Hague tribunal might do so.

Again, pecuniary claims are extremely perplexing. Even the most conscientious arbitrator is liable to be misled in passing upon them. Our own history supplies many cases in point. We had an arbitration with Mexico not many years ago, of which the agreed umpire was Sir Henry Thornton, the British Minister at Washington. Two claims of American citizens against Mexico for large amounts were presented and examined with great care, and much testimony was taken pro and con. Both were allowed by the arbitrator, but before the payments were completed it was found that they were wholly fictitious, having no more basis than Mme. Humbert's claim to the Crawford estate, which was itself non-existent. A little earlier we presented a batch of private claims against China which were allowed and paid, and after our Government had distributed to the claimants all that they were entitled to we had a large overplus. The Chinese Government refused to receive back the excess, because that would have involved the admission that the money had been wrongfully paid in the first instance, and the officials concerned would have lost their places if not their heads. So many are the pitfalls in claims for cash damages that the responsibility for passing judgment on them should be somewhat widely distributed, so that the blame for misjudgment may not fall upon a single head. Surely President Roosevelt would not wish to be held responsible for the decision in favor of the Weil and La Abra claims against Mexico.

Another, and not the least, reason why we should turn the Venezuelan case over to the Hague tribunal, instead of assuming the arbitration ourselves, is that the latter course would commit us to the rôle of arbitrator in future cases. Every similar dispute would be brought to us for determination. We should seldom be without one, and, when the novelty wore

off, nothing would be found so irksome as the settlement of petty quarrels in which we have no interest. Undoubtedly the European Governments would consider our arbitration of the Venezuelan case as a sort of guarantee that the judgment would be carried out, but that should make us pause before assuming the task. It might be very embarrassing if we should decide that Venezuela owed some millions of dollars to those Powers and Venezuela should refuse to pay.

*MARTENS AND ROOSEVELT.*

Prof. Frederick Martens, the famous Russian publicist who presided over the Conference at The Hague, and is well known for his writings on international law, addresses some weighty words to Americans in last week's *Independent*. He points out, with the detachment of a foreigner and the acumen of an expert, the inevitable dangers of "contemporary American Imperialism." Admitting all that can be claimed for our recent conquests, as a proof of "power and vitality," this friendly authority warns us that we cannot possibly hope to attain such "brilliant results" through militarism as we have already achieved in the "peaceful sphere of commerce and trade." He is particularly strong on the viciousness of a colonial policy. Laying down what was, before 1898, a commonplace of American political doctrine, he says:

"Only those conquests form a real and solid basis for the development of the living forces of the conquerors which become incorporated with their very flesh and blood and form an organic part of their possessions. If the conquest is limited to the establishment of absolute power over the annexed territory, without its having been incorporated into the kingdom of the conquerors, the only possible result will be a subjugation that has to be maintained by a crushing physical force."

All this many hasty readers will be inclined to toss off as the jealous or scheming utterance of a Russian who wants his own country to do all the colonizing. But Professor Martens is supported by the very highest American authority. President Roosevelt himself has taken the same position, in almost identical language. Indeed, so closely does the Russian professor follow the ideas of the American thinker that he might be captiously accused of plagiarism. Mr. Roosevelt's views on colonies and a colonial policy were given to the world in 1896; yet so short-lived was the medium of publication which he chose, and so poor is the modern memory becoming, that probably nine-tenths of his party would indignantly deny that he had ever said anything of the kind. We suggest that a few sample sentences be submitted to eminent Imperialists at Washington and elsewhere, with the offer of a prize for a correct guess at the author. For example:

"The establishment of a colony prevents any healthy popular growth."

"At the present, the only hope of a colony that wishes to attain full moral and mental growth is to become an *independent state*."

"Under the best of circumstances a colony is in a false position. But if the colony is in a region where the colonizing race has to do its work by means of other inferior races, the condition is much worse."

"There is *no chance* for any *tropical* colony owned by a Northern race."

Incredible as it seems that such utterances should have been forgotten in six hurried years, there they stand, with many others equally significant, in the defunct magazine, the *Bachelor of Arts* for March, 1896, under the name of Theodore Roosevelt. He was as far then as any other American from entertaining the notion that it was our duty, or that it would be a good thing for the world, to go to chaotic peoples and restore them to order. "Mean and bloody," he wrote, though the history of the South American republics had been, "it is distinctly in the interest of civilization" that they should be left to "develop along their own lines." How far below the horizon then was the conception of "forcible civilization"! Our obligation to suppress "anarchy" in a distant island had not then been invented, nor had we come to perceive the duty of putting our hand to every "mean and bloody" government and making it altogether such as we are. A Filipino, turning back to the doctrines of Mr. Roosevelt's article of 1896, would ask nothing better than their application to his country.

Of course, Mr. Roosevelt was writing immediately after the Venezuelan troubles of 1895-6; and what he had in mind, as would be made clear by words we have omitted, was South American and West Indian colonies. But he laid down his doctrines—as he always does—under the guise of eternal truths. It was colonizing as such that he reprobated, and it was for the independent life of every struggling people that he contended. He would be the last man to say that a great principle which he had strongly asserted for tropical colonies in one degree of longitude did not hold good in another. Accordingly, we are entitled to claim him as in entire agreement with Professor Martens on this whole question of subject races and the true mission of America. When the Russian expresses concern at the rapid growth of our "war budget" in consequence of having colonies, he is only saying what Theodore Roosevelt did six years ago. He, too, perceived the danger of burdening ourselves with dependencies. "We do not wish to bring ourselves to a position where we shall have to emulate the European system of enormous armies." Holding these truths, as Mr. Roosevelt holds all his truths, with passionate conviction, and with the certainty that neither time nor place can affect their validity, it is only fair to presume that he is simply biding his time to put them in force.

*"LABOR" HAVING ITS FLING.*

These are great days for organized labor. Its leaders are as petted and deferred to as are those other spoiled children of our unbounded prosperity—the plunging speculators. Against the latter's recklessness in financial operations, President Roosevelt raised a warning voice. He said in one of his speeches that their rash methods in the stock market brought our very prosperity into peril. The same might be said of the current and extravagant demands of labor leaders. They, like the Wall Street adventurers, are taking advantage of the prosperous times to have their fling; but the reaction, the "next-morning" headache, is as certain to come in the one case as in the other.

For the present, however, no absurdity seems too extreme. The Eight-Hour law now pending in the Senate has been shorn in committee of some of the wilder provisions inserted by the House at the request of labor organizations, but, as it stands, retains some most vicious features. A penalty is fixed, not simply for requiring, but for *permitting*, a man to work more than eight hours in Government employ or on a Government contract. That is, the right of a workman freely to sell his labor is denied. He may be a non-unionist, ambitious to work longer hours for better pay, but the bill makes all such energy a misdemeanor. Could there be a more direct way of cutting the nerve of enterprise, and reducing, so far as a statute can reduce, American workingmen to a dead level of inefficiency and hopelessness? That the Eight-Hour law is understood by its authors to be a clog on activity and a premium on idleness is tacitly confessed in the provision that in "time of war," or "emergency," the act may be "waived." When work must be done, that is to say, the bill to prevent its being done has to get out of the way.

The ridiculous strike now in progress at the City Hall in this city illustrates another excess of folly on the part of organized labor. In this case, we have to do with the anise and cummin of "labor" ethics. It is not a question of union men or hours or wages. The contractor is more than ready to grant all that is asked of him in those particulars. But the strange man stands out against the demand of plasterers that they, not he, appoint a foreman to oversee the job, and that he pay the strikers full wages for all the time lost in refusing to work while disputing with him. Then there is a certain amount of plaster laid and marble set by the defiling hand of non-union labor. That must all be torn out, and a sort of ceremonial purification of the spot made, before a fastidious unionist can consent to enter the room. This is the very mummery of organized labor. It is but one instance of thousands that could be cited of unionism falling into a kind of sacrosanct notion of it-

self, setting reason at defiance, and imperilling the comfort, health, and even lives of many people in order to assert a strained and transcendental claim. That this sort of unionism run mad can ultimately succeed is impossible; and we hope the municipal authorities will not make the serious mistake of trying in any way to induce the contractor for the City Hall repairs to budge from his sturdy attitude. In it he represents not only free labor, but common sense, as against an insane form of serfdom.

That a revolt against such absurdities in the name of labor is bound to come, we have not the slightest doubt. A standard was raised, we are glad to say, by Judge Gray in the strike hearings at Scranton on Thursday, to which honest men should be glad to repair. In manly fashion he spoke his mind about the infinite meanness and sneaking cowardice of the boycott, and poured hot shot into the ranks of the union intimidators. One of their favorite dodges of late has been to call indignantly for "legal evidence" that they or any of their union were guilty of the stoning and dynamiting and shooting that went on in the mining region. How do you know, they have asked, that it was not some outsider? Don't charge it to us unless you can prove it under the strict rules of evidence. But Judge Gray cut through this sophistry with one angry stroke. The boycotter and the midnight assassin, he observed, were just the kind of arrant cowards to take refuge behind the obscurities of legal evidence; and, for his part, he should refuse to rule out testimony because it was not of a technically correct sort. This is refreshing, whether we regard it as downright horse sense or as courage. Everybody is convinced that the stringent boycott and the outrages which created a reign of terror in the coal-fields were the work of the strikers; and for them to attempt to crawl out of responsibility because nothing but circumstantial evidence can be adduced, puts them in a position to which nothing less than Judge Gray's scarifying words could do justice. He deserves a vote of public thanks.

As we say, the extravagances of trades-unionism, which we now see so thick on every hand, are a sort of reflex of our years of prosperity. It is an era when "everything goes," whether in finance or in unionism, and repentance is put off till a more convenient season. It is altogether likely that it will soon be upon us, convenient or inconvenient, and that the preposterous assumptions of organized labor which are tolerated or even lauded to-day, will then be impatiently swept aside.

### *THE FIGHT FOR VIRGINIA.*

A number of patriotic citizens of the State of Virginia, representing both the white and the colored races, are now engaged in a contest for the good name of their State and for its republican form of government. Their effort is to have the new Constitution of the State, which was proclaimed on July 10 of this year, declared illegal because of the manner in which it was drawn, because of its unjust discriminations in the matter of manhood suffrage, and because of its mode of promulgation.

At an election held in May, 1900, the people of Virginia voted in favor of the proposal for a Convention to revise the Constitution which had been submitted to them by the General Assembly. On February 16, 1901, the General Assembly, taking cognizance of the popular vote, provided for the election of delegates, for the meeting of the Convention, and for submitting the revised and amended Constitution to the people of the State of Virginia for ratification or rejection. It was specified that if the Convention completed its work before October 5, 1901, the voters of the State should pass upon it as a whole or by separate articles, at the election of November 5, 1901. Should the Convention fail to complete its work by that date, the next General Assembly was to enact such measures as it deemed proper for submitting the new Constitution to the people. In addition, the Democratic party, "by every method and by all the representative utterances through which political parties give pledges," pledged the submission of the Constitution to the people. The members of the Constitutional Convention duly assembled on June 12, 1901, and began their extraordinary career as a representative body by refusing to take any oath of office. This is held to have been a direct violation of Article iii:, section 5, of the old Virginia Constitution, under which the Convention met, and the failure to take any oath of office is declared to have rendered all their proceedings null and void. None the less, the Convention sat until June 26, 1902, more than a year, and brought to completion a monstrous Constitution, comprising sixty-five pages of printed matter, eight pages of schedules, and twenty-four pages of registration ordinances—the result of its openly avowed intention to deprive American citizens of their suffrage merely because of their color.

Thus conceived, it was natural that an illegal method of ratification and promulgation should have been decided upon. A bare majority of a quorum of this convention refused to submit the new Constitution to the people or to leave the question of its submission to the next General Assembly as was specifically required by the law of February 16, 1901. After voting down propositions to refer it to the old electorate and to the new one provided in the new document, the Convention voted by less than a majority—forty-seven votes—to ordain the Constitution itself, although it contained many subjects never before embraced in any organic law of the State. This document was declared, by the proclamation of Gov. Montague, to be the will of the people of Virginia as expressed by their duly elected representatives, and went into force after an interval of only two weeks.

The Constitution achieves its main purpose of negro disfranchisement by the now familiar Southern way of registering voters. Not only are registering boards, consisting of three citizens, called for in this most extraordinary document, but the Convention actually *appointed* three persons in every magisterial district and in every city ward to serve during 1902 and 1903, thus depriving the Executive of the appointing power. What wonder that the citizens who have taken this matter into court denounce the Convention's acts as revolutionary, and assert that the appointees were only such men "as could be relied upon as partisans of the dominant faction to carry out its plans"? They further declare that "the autocrat of the Russian Empire has no more absolute mastery over the political forces of his empire, and is no more potent to control the membership and organization of every representative body in his realm, or the incumbency of every office in his dominions in perpetuity, than has the dominant faction of said Convention in Virginia, if this ordinance and Constitution are valid."

With the boards of registrars duly selected, the achievement of the outrage in view was easy. It was specified that only such voters should be registered as were "able to read any section of said Constitution submitted to them by said officers of registration, and to give a reasonable explanation of the same." If unable to read, the voter was to be able to understand or explain. This provision has been applied exactly as in the other Southern States. The most preposterous questions, which no constitutional lawyer of eminence could answer offhand, have been asked of negro citizens, men of means, probity, and standing, when they have sought to exercise the right of suffrage conferred upon them by the Congress and the people of the United States. In the city of Manchester, for instance, the number of colored voters has been reduced from 650 to 67; in the County of Kent the decrease is from 800 to 76; in Middlesex County from 1,113 to 237.

It is a credit to the State of Virginia that one of its sons, bearing an historic name, Mr. John S. Wise, has taken the lead in the attempt to restore a truly republican form of government in Virginia and to prevent the further consolidation of the oligarchy which now rules the State. Rightly believing that he and those with him are fighting in the interests of the white men of Virginia as well as of the black, he recently appeared in

a test case before the United States Circuit Court of Appeals, which is directly vested with jurisdiction in cases of interference with the suffrage bestowed by the Federal Constitution. Chief Justice Fuller held, however, on the ground of the political character of the case, that the Circuit Court had no jurisdiction. An appeal has been taken to the Supreme Court. The matter will also be brought before the next House of Representatives, as it should be.

## THE BEAUVAIS POTTERY.

PARIS, November, 1902.

Few people are interested in ceramics, yet it would seem that, if the arts are not essentially useless, we might find sympathy for that one of them which is most practical. For some reason that no wise man knows, a vessel, Greek, Chinese, or Japanese, gives us pleasure by its shape; and an artist, who feels these things more especially, obeys a need and an instinct as he turns the edge of his vase in or out. He designs it with such and such a curve, a straight line, an angle; at such and such a size; with just such a profile and just such a contour. If the work is good, nothing can change. In reduction or enlarged, it is spoiled as much as if it were drawn apart.

The question of color is more complicated. Ceramics are painted with enamels, of which, however, we know as yet only four or five that withstand the highest temperatures. The vessel has already been baked and is pottery when they are applied, one or more of them, in various ways, according to the purpose of the artist. Exactly what the action of the fire will then be, is not always possible to determine. A draught in the oven, an accident in the fuel, and other things have strange effects. Notwithstanding, the Chinese and Japanese managed not only to produce perfect monochromes, but also to glaze and to crack them in many ways; further, to run drops of one color down and into another, to superpose, to streak, and to dapple—all with an apparently sure hand. To regain this surety and to realize the colors with which he imagines his vessel endued, is the practical aim of the modern ceramist.

All this and many other details the best known of these artists, Delaherche, explained to me one evening, as we wandered home by the Seine, after dining at a friend's house. To talk further was useless; and so, with the generosity common to French artists, he suggested I should spend a day with him around his oven in the country (it happened he was baking that very week), and I should know the secrets of his art and life as well as I could. We started, a friend and I, early one morning, painfully cold and damp, for Beauvais. A little snow had fallen, and, as we had half an hour to wait there before taking a branch road further, we paid a visit to the cathedral. It looked all the higher for being white; the old Gothic builders had clearly dreamed in winter. We ran back to the station, and travelled on for half an hour. Getting out at Ons-en-Bray, we took the soaking road through country much like the Berkshire Hills. At the top of a long hill Delaherche met us, a big, tall man, huge round the waist, with a gray beard and black, sad eyes. Half a dozen little buildings and sheds are grouped on his land; four of them, end to end like a train of cars, stop at the chimney of his oven. The fire had been going since seven o'clock in the morning previous, and neither he nor his men had slept that night. It was fed by three slots with wood; through eyeholes you could look inside, into the reddish or white incandescent atmosphere. Twice samples were taken out with a prong, broken and tested, to see if the matter, still porous, was becoming vitrified. At half-past three the samples were satisfactory, the slots of the oven closed with slabs and mortar, and the oven left for a few days to cool. Four thousand kilos of wood had been burned.

Meanwhile we had lunched, talked, wandered about and smoked. Here were shelves of pottery, yet to be enamelled; there rows of unsatisfactory or discarded shapes and colors. One of the buildings contains on its walls all that Delaherche recognizes as his; and here I spent most of my time, much alone. His earlier style is massive and brutal, certain vases being some two feet high, with wild, violent enamelling. You can almost see him restraining himself as you pass to more manageable sizes (vases and goblets chiefly), when the red and green and blue are richer and duller; when the running of the second enamel in drips and drops from the rim is surer and stronger; when the general effect is more elastic, but no less solid. On a few shelves you then find what came out of the last baking in April. In general, the vase stands firm on the ground, while the line, as it rises, tapers slightly to a thin, subtle edge. Many vessels bear ribs, which add to the metallic quality of their color, for while the surface is never glazed, the tone under it vibrates, and coats of enamel, molten irregularly, hold the light without letting it follow round the shape. Of the colors, those which most struck me were a shade of olive green and another of gray blue, both used in monochrome and wonderfully rich and true. Here and there, on some specimens, were runs of gold, which had minutely crystallized and sunk into the primary color; when this is red, the effect is astonishing, and you hold the vessel without knowing what to say.

As evening fell, Delaherche came into the room and took up a piece here and there. One was a common brown jug, with a pattern cut round the body; it was one of his first attempts, and could once be bought, as it rarely was, for fifty centimes. "If I asked the same for what I do now," he added, "I should sell nothing. A lady came in here the other day and asked me for the best thing I had; when she learned it cost only a thousand francs, she was disgusted and left." He began life with little, and soon sunk all he could muster. Now that his reputation is made, he still has modest means, owing chiefly, as a friend of ours told me, to his throwing away all that doesn't quite succeed.

I was again left alone, as he went to get ready to go to town with us. It was clearly a strong, uncompromising man who worked and lived in this way, who lived out and loved his art. He was born in Beauvais, where, between building the cathedral and weaving tapestries, many human souls have found life long enough to work out in stone and dyed wools the patterns of their thought. I imagine they found their reward. Much in the same way their brother-citizen now lives on the hillside near them, carrying out, just as well as he is able, that something human which now becomes a picture, now a statue, and, in his case, a vase, a bowl, a pitcher; shaping and coloring them as he sees them, and spending his life upon so doing; finding pleasure and duty, and using his whole love in these things—like every one who ever has done anything well worth doing and well done.

TRUMBULL STICKNEY.

## PIERRE LOTI AT PONDICHERRY.

PARIS, December 4, 1902.

It has always been one of the ambitions of France to have a colonial empire, though it has often been said that the French are never so satisfied as when they are in France. They are the most self-centred, self-contented people in the world, yet they have founded at great expense colonies which afterwards fell into the hands of rival countries. "Sic vos non vobis" applies admirably to their colonial efforts. Since the unfortunate war of 1870, which deprived France of two provinces and laid open her eastern frontier to invasion, we have witnessed the creation of a colonial party, which has its representatives in the Chambers, its newspapers, its organization, and we may say its heroes, for the word is justly applicable to some of the famous explorers of late years. To be an "explorateur" has become the ambition of the most ardent of our young men; the extension of the French Colonial Empire is their dream; it is the form assumed by the idea of the "revanche." If France has lost ground in Europe, she must find new regions on the earth's surface in which to develop her energies and extend her influence. I saw not long ago a map which showed that the present colonial empire of France is sixteen times larger than the superficies of France proper. Time will disclose if this stupendous effort will be recompensed, if there be any delusion in this appearance of greatness, and if once again the old "Sic vos non vobis" will assert itself at our expense.

I recently made these reflections when reading an article by Pierre Loti under the title, "Dans l'Inde des Grandes Palmes." Loti does not pretend to be a philosopher or a political economist; but he is such an admirable painter of what comes under his eyes that he always deserves to be read, and can be read with profit even by those who do not care solely for the magic of style. I will not dilate upon his descriptions of India, of the marvellous rock of Tanjore, of its great temple, of the processions around it; on his visit to Madura, its temple, and its priests; and will pause at once at Pondicherry. This name recalls to my mind the struggles of old times, the rivalry of France and England, when they both sought domination over India; great names now almost forgotten. "Of all the names of our ancient colonies which charmed my boyish imagination," says M. Loti, "the names of Pondicherry and Goree were those which threw me into the most indescribable dreams of exoticism and distance. When I was about ten years old, a great-aunt of mine, very

old, spoke to me one evening of a friend of hers who had resided in Pondicherry, and read to me a passage from one of her letters, dated at least half-a-century before, in which there was mention of palm-trees, of pagodas." Pondicherry still retains enough importance in French eyes to have a representative in our Parliament. After the war of 1870, when everything was uncertain, and when a Constituent Assembly was chosen with the mission of deciding the form of government, Pondicherry was not forgotten, and a descendant of one of the early governors of the colony took his place among the representatives of the country. I am not personally favorable to the representation of colonies in Parliament, as their deputies are invariably nominees of the Government; but the honor paid, in this instance, to Pondicherry is a touching homage to the past—a sort of tie between old France and modern France.

These were Loti's first impressions on arriving:

"Oh, the melancholy of entering this remote and charming little town, where sleeps, between old walls, a whole French past! Little streets much like our own in our most tranquil provinces; little streets, very straight, with low whitewashed houses, a hundred years old, on a red soil; garden walls from which fall garlands of tropical plants; iron-barred windows, behind which one sees the pale faces of Creole women or *métis*, too pretty, with some of the Indian mystery in their eyes. Rue Royale, Rue Dupleix—one sees the names engraved on stone, in letters of the eighteenth century, such as I remember having seen on old corner houses in my native place; Rue Saint-Louis—Quay de la Ville Blanche—quay with a *y*."

Who ever goes nowadays to Pondicherry? The little town is like a fossil in a geological stratum—it lives only because it has lived; it has no port, no industry, no electricity; it has even no transit; it sees no strangers, no tourists.

"On the sea front," writes Loti, "a garden, where a band plays in the evening and where one sees, while the sun sets, a few babies, rather pale, some brought from France, the others born in exile. There, among the fine tropical trees around the statue of Dupleix, are a number of columns, so tall and slender that one would almost think them ship's masts; they are precious monoliths, cut in granite, in the fine Indian style, witnesses of our past greatness. The Maharajah of the country once offered them to this same Dupleix, to adorn the palace of France, which, alas! has never been built."

Not that there are no palaces in Pondicherry. "Pondicherry, a city of palaces," say the Hindus; but they give this name to the Government houses, fine old buildings with columns like those of Greek temples. These are inhabited by the officers and the functionaries of the colony, who are now nearly the only representatives of the metropolis. There are, however, some old Creole families left, which, after four or five generations, form a sort of variety of the French race.

"Old ladies," says Loti, "with nice and a little superannuated manners; old drawing-rooms with a melancholy charm, with chairs of the eighteenth century, clocks in the Louis XVI. or Empire style, sent here by way of the Cape of Good Hope, when nobody could foresee the Egyptian passage, clocks which have counted the hours of so many languid lives, which have given precision to so many exiles' agonies. . . . It may seem infantine, but the old clocks which I find in the colonies often speak long to my soul."

Speaking of the indigenous city, which lies behind the "white city," Loti tells us that it is very large, animated, full of life, with its bazaars; but even there the Hindus are Frenchified—they care for France, at least, they like to say. He was entertained at a purely Hindu club created in order to favor the reading of French reviews and books; he visited a school where the French language is taught to Hindu boys, "with delicate bronze faces, very well brought up, very courteous, dressed like little rajahs, with velvet gowns embroidered with gold." Loti describes in an almost untranslatable manner, and with an abundance of precise and vivid traits, a banquet given to him in the house of the richest of these Hindu-French.

"The host, on my arrival, ties round my neck, with several strings, a collar of natural jessamine, which scents and inebriates me; he also perfumes me with rose-water, contained in a flask of silver with a long neck. The heat is suffocating. Over the invited guests, who are seated—the great majority have brown heads with turbans shining with gold—there is a swaying of gigantic fans, painted leaves which are balanced by standing and naked servants; and their nakedness seemed stranger, amidst this gaudy crowd, where even the men wear diamonds on their heads and about their waists."

A famous dancer has been sent for, in honor of Loti; she comes from one of the temples of the south, and belongs to the service of Shiva. She is very dear and very celebrated; an Indian star. I despair of translating the elaborate description of her dance, and content myself with this final remark of Loti's, who seems to have been enraptured by this *bayadère* while she danced, and almost shocked by her calm indifference after she had gone through her performance. "What," he asks, "can there be in the soul of a *bayadère* of an old race, of an ancient caste, daughter, grand-daughter, great-grand-daughter of *bayadères*, atavistically prepared during hundreds and thousands of years to be nothing but a creature of illusion and of pleasure?"

Loti spent but a short time in Pondicherry, and was quite surprised to leave it with so much regret. It seemed to him that the little old French city had taken possession of him; he had found in it old memories and associations. Pondicherry has but two hotels, both very modest; he chose the one on the seashore, "an old house, with the air of a lordly manor, dating from the foundation of the place, and hiding its age under whitewash." He had become attached to his room, "windows with green shutters opening on the immensity of the Indian Ocean." As in certain Creole drawing-rooms, he had centenary chairs.

"Everything was dry-rotted; one dared not sit too hard, or to get into bed rudely. . . . Oh, the tranquil melancholy of mid-day, when the tropical sun overpowered the silent little streets, with their old-fashioned names! Neither in my room nor anywhere about was there any indication of modern times; nothing to fix an epoch, either on the solitary terraces or far away on the blue expanse, deserted and infinite. And what calm was in the men who were occupied in preparing their stacks of grain, and made one think of scenes of colonial life! Then, forgetting our fever, our agitation, our rapid steamers, I thought myself returned to France with the slowness which multiplied the distance tenfold, rounding Africa in capricious sailing ships."

We must not expect M. Loti to give us any documentary evidence on the present state of the little colony, on its productions, its exports and imports. He is a poet, not an economist. He does not reckon the expense of maintaining the colony; he does not give us the list of its numerous officials; it is to him a piece of old France, and as such he admires and loves it.

# Correspondence.

## THE HAY-BOND TREATY.

To the Editor of The Nation:

Sir: The text of the Hay-Bond treaty has at last been made public, and all can recognize that it is on the whole a sensible arrangement. Capt. Sol Jacobs, the leading fishing skipper out of Gloucester, has given the treaty his hearty approval. It will be of immense benefit to the Banking fleet, relieving them of dues which are very heavy, amounting to from $300 to $500 on little schooners of about 100 tons. The opposition to the treaty in the Senate will not come from the fishermen, but only from a small ring of fish dealers in Gloucester. It will form one of the most remarkable incidents in the history of protection in the United States if this small, selfish gang of monopolists shall by any chance defeat the measure, or even produce a strong opposition to its approval in the Senate. Their avowed tactics are to produce delay, and eventually to kill the treaty. What must be the state of public opinion in a country when a dozen small dealers can endanger the passage of a treaty whose object is to give free entry to fish products and to cheapen the food of a great nation?

Reading between the lines, one can see how a sop has been thrown to the protectionist Cerberus. Fresh codfish is not included—a most extraordinary anomaly when we consider the wholly inadequate supply of cod brought into your markets. At the present time its price is from 100 to 200 per cent. dearer than the same fish in Europe. Why the most substantial and palatable of all the salt-water fishes, the beef of the sea, should be excluded "bates Banaher entirely." Slates for buildings, which are most abundant in Newfoundland, are limited by the treaty—the sacred rights of the American workman are preserved; they must be untrimmed, and only a Yankee mason can square the sides or make the nailholes.

We hope the treaty will come into operation, notwithstanding the Gloucester fish ring. Its results will be to add largely to the fish supply of the United States. Newfoundland is one of the greatest salmon-producing countries in the world. Attention is now being paid to the protection of its rivers, and if this is kept up adequately for a few years, the supply of this splendid fish will be immensely increased. At present the supply of the world is quite unequal to the demand. London alone is every year short by 1,000 tons of its proper supply of salmon. The new treaty will have the effect of largely increasing transportation of fish by cold storage, which is now only in its infancy in the colony. Combined with rapid transit, there is no reason why Newfoundland's splendid catch of salmon, lobster, turbot, capelin, and herring should not be sent fresh three times a week to the States. Already two

wealthy companies are making offers to the local Government to inaugurate cold storage on a large scale on the west coast.

All honor must be paid to the Newfoundland Premier, Sir R. Bond, for the dogged perseverance and diplomatic ability he has shown in carrying out this treaty. It is to be hoped that reciprocity with Newfoundland is only the precursor to further treaties of the same enlightened character.

D. W. PROWSE.

ST. JOHN'S, NEWFOUNDLAND, December 16, 1902.

## CRIME AND OUR COLORED POPULATION.

TO THE EDITOR OF THE NATION:

SIR: Will "W. H. B." please inform the public where he gets authority for the extraordinary statement in his communication to the *Nation* of December 18, that, "in proportion to their numbers, the educated Negroes were more criminal than the illiterate," according to the census of 1890?

The 1890 census report on Crime, Part I., page 172, and the 1890 report on population, Part II., pp. xxx. ff., show conclusively, as it seems to me, that the 42.90 per cent. of the Negro population who can read and write furnish 38.88 per cent. of all Negro prisoners, while the 57.10 per cent. of the population who are illiterate, in the census use of the term (*i. e.*, cannot write), furnish 61.12 per cent. of the crime. This is not only true of the nation as a whole, but it is also true of every section, North as well as South, except the West, where there are less than 25,000 Negroes—a number manifestly too small for generalization. . In other words, in proportion to their numbers, the illiterate Negroes were in 1890 more criminal than the educated. Moreover, of all the 24,277 Negro prisoners, only 321 had any education above that of the common schools, while over 2,000 were either mechanics or apprenticed to a trade.

Again, when "W. H. B." dwells on the higher proportion of criminals among Northern than among Southern Negroes, does he remember that half the Northern Negroes were bred and born in the South, and are thus products of Southern conditions; and that it is this half which is furnishing the larger part of the black criminals of New York, Philadelphia, and Chicago? W. E. BURGHARDT DU BOIS.

ATLANTA UNIVERSITY, GA., December 20, 1902.

## THE AMERICAN SCHOOL IN ROME.

TO THE EDITOR OF THE NATION:

SIR: The implications contained in a review of the Papers of the British School at Rome, in your issue of October 16, are due to ignorance, on the part of the reviewer, of the true conditions. His statement that the annual expenditure of the British School is "only about one-sixth of the amount at present required by its American forerunner," is doubtless true; but, in the two years of its existence, the British School has had one pupil, while during the same two years there have been fifty at the American School. The British School has given no lectures nor organized any trips in Italy or Greece. The American School has given at least one lecture every day during the term, and has paid German and Italian specialists to give courses on Rome and Pompeii, and has sent its students to Greece under the charge of a trained scholar. In number of books and magazines bought during the last two years the American School has gone far ahead of its most friendly rival, the British School.

Your reviewer refers to the "American School in Rome, which publishes in the *American Journal of Archæology* papers by its youthful and previously untrained students." It is true that most of our students have at one period or another been youthful, but the reviewer will find that the number of papers printed by our students is extremely small, and unprejudiced criticism will, I believe, not find in them any exceptional signs of youth or lack of training.

Your reviewer also errs in regarding Mr. Ashby as in any sense a real student of the British School. Mr. Ashby is an archæologist of private means who has spent the last eight years in Rome, and gave a course of lectures at the American School last winter. It is only by using the word in a very different sense that he can be called a student of the British School, if the same word student be applied to the members of the American School.

So far as the maps are concerned to which your reviewer draws attention, they are, so far as actual map-making goes, merely copies of the regular Government maps from which certain details and contour lines have been erased, while archæological notes have been added.

Meanwhile, we here appreciate the fine quality of the work done by Mr. Rushforth and Mr. Ashby probably more than your reviewer is able to do; and if he will supply two or three students here with abundant leisure and ample means we will try to rival their production.

Respectfully yours,

RICHARD NORTON, Director.

AMERICAN SCHOOL OF CLASSICAL STUDIES IN ROME, November 4, 1902.

[The former of the two references in our review to the American School in Rome stated an interesting fact of comparison, but intimated no censure, and challenged no defence. The latter reference certainly may be taken to imply criticism (and no educational institution can properly hold itself to be exempt from criticism), but its accuracy is unquestioned, and there is not an appearance of unkindness in it. It is merely in accord with an expression of opinion prevalent in both this and foreign countries upon published work thus prominently called to public attention. We are glad, however, to publish the Director's comment on the fact.

We cannot have "erred in regarding Mr. Ashby as in any sense a real student of the British school," for we happened not to refer to him in that capacity at all; but, in justice to the truth, we must remark that Mr. Ashby is duly recorded, and records himself on the title-page of his monograph, as "student of the British School at Rome." The British School, evidently, like its German and French compeers, attracts just such advanced students. We only wish the American School were as fortunate.

We are quite unable to understand the exception taken to our simple remark that "eight detailed maps of the region on the large scale of 1:25000 accompany [Mr. Ashby's] article." It is certainly true; and we had not supposed that any archæologist would be expected to attempt the impossible task of carrying out anew and by himself the vast scheme of triangulations and other surveys that the Italian Istituto Geografico Militare has, through its maps, put at the disposition of every student.—ED. NATION.]

# Notes.

Volume 4 of the generous 'Variorum and Definitive Edition of the Poetical and Prose Writings of Edward FitzGerald' (Doubleday, Page & Co.) consists wholly of the six dramas after Calderon, published by Pickering in 1853. The chief interest of this reprint lies in the author's interlinear emendations, which are especially abundant in "Three Judgments at a Blow." They deserve examination, for they testify to FitzGerald's taste when applied in self-criticism. In no single instance, we think, will there be a disposition to prefer the original reading to his second thought. With the Omar quatrains, we all know, this was not the case with author or public.

Edgar Mayhew Bacon's 'The Hudson River, from Ocean to Source; Historical, Legendary, Picturesque,' with its 100 illustrations and sectional map (G. P. Putnam's Sons), is evidently put forth as a companion volume to 'The Mohawk Valley,' issued a year ago by the same publishers. Like that work, it bears internal evidence that its chapters were written as separate essays and have been little altered when gathered into a volume. Hence the work has neither unity nor completeness. In scope it is limited to descriptive stories and legends of the shores of the tidal river only, from the Battery to Troy; precisely the waters over which Henry Hudson sailed "from Ocean to Source," as he and the present author have supposed. The great river as a unit, the dramatic contrast between its headwaters in a wilderness still primeval and its discharge by the wharves of the New World's greatest oceanport, its influence on the courses of war, of commerce, of population, are themes neglected or deliberately ignored. This understood, the book is acceptable as a collection of lore concerning many ancient and interesting towns and hillsides, presented in pleasing text and illustrations. Statistics and other information of cyclopædic character are carefully avoided, but the historical references are usually accurate, and the occasional errors in one chapter are often contradicted in another, thus doing little harm. Those who are interested in the subject will wish to own the book, but should take a preliminary course of training with dumb-bells before attempting to handle it, for, though an octavo of less than 600 pages, it weighs four pounds and six ounces.

Mrs. Arthur Bell's knowledge of art has been so reinforced by research into early Christian history and legend that she can insist on the student's being "as thoroughly in touch with the subjects treated as

were the artists themselves." Her book on the 'Evangelists, Apostles, and Other Early Saints' is now followed by 'Lives and Legends of the Great Hermits and Fathers of the Church, with Other Contemporary Saints' (London: George Bell & Sons; New York: Macmillan), which covers the hagiology of 300 to 700 A. D. Of the numerous illustrations, few are familiar, and but three by recent painters—Burne-Jones, Lord Leighton, and Puvis de Chavannes. A third volume in the series is promised, to deal with mediæval subjects, chiefly English.

The Century Co. makes a pretty book of Ruth McEnery Stuart's amusing magazine short story, 'Napoleon Jackson: The Gentleman of the Plush Rocker,' with illustrations. It is the thousand and first contribution to that stock of negro fiction and studies which the abolition of slavery seems rather to have stimulated than discouraged.

Mrs. Ethel E. Bicknell's 'Praise of the Dog: An Anthology' (London: Grant Richards; New York: Dutton) is a very attractive pocketable volume of tastefully selected prose and verse. The arrangement is chronological, from Cicero to the present day. Pope's "Lo, the Poor Indian," Goldsmith's "Elegy on the Death of a Mad Dog," Cowper's "Dog and Water-Lily," Spencer's "Gêlert," Wordsworth's "Fidelity," Scott's "Death of Keeldar" and "Helvellyn," Byron's epitaph on "Boatswain," Butcher and Lang's version of Homer's episode of the dog of Odysseus, are here, with much else that is either classic or good, despite the omissions for which the compiler needlessly apologizes.

Tardy mention befalls the two delightful new tiny "Bairn-books" (London: Dent; New York: Dutton). One is 'The Book of the Zoo,' the other 'The Book of Shops,' and this latter is a really clever vehicle of practical information for little folk about shops and shopping, with a chapter on the post-office. The series continues to be distinguished by its colored pictures and its clear, large print.

The purpose of Gerald Stanley Lee, in 'The Lost Art of Reading' (G. P. Putnam's Sons), appears to be the expression of ordinary ideas in an extraordinary way. The result is a book of essays which cannot be commended except to persons of abundant leisure, for it is fatiguing to read even three or four pages at a single sitting. Mr. Lee deserves, however, the kind of praise that was given to the preacher who was told, when coming down from the pulpit, "That was a fine text you gave us this morning." Some of his topics, as, for instance, "The Country Boy in Literature" and "On Reading Books through their Backs," are aptly chosen.

The volume on 'Hampstead and Marylebone,' contributed to "The Fascination of London" series by G. E. Mitton (London: A. & C. Black; New York: Macmillan), deals with a section of the metropolis which is not particularly rich in historic interest. The compiler has, however, shown much diligence in the collection of his material, and has produced what will be a useful supplement to the guide-book. Hampstead has a special association with the 'Survey of London,' as its general editor, Sir Walter Besant, lived within this district.

An unusually diligent and unselfish career is described in 'Sir Isaac Pitman: His Life and Labors,' by Benn Pitman, a brother of the subject of the memoir. Sir Isaac was known the world over as the inventor of the system of phonography. His efforts for the introduction of phonetic spelling, which he thought more important than the simplification of shorthand, were less successful. One of the most interesting features of this biography is its account of the long process of experimenting by which the inventor of the phonographic system improved on his original scheme. It often happened that the simplest and most convenient method was the last to come. The chapter on Sir Isaac Pitman's physical and mental traits relates that he worked at his desk from 6 A. M. till 9 or 10 P. M. all the year round, and that for fifty years he rarely, if ever, took a holiday. He was a vegetarian, and seldom took a meal away from home. He died in 1897, in his eighty-fourth year. The day before his death he dictated an article for his magazine.

In 'Indian Fables,' by Ramasvami Raju (Dutton), we have a collection of tales forming an interesting parallel to the Greek collection, but unfortunately not shown to be independent of the latter. No place or date is assigned to any one of the fables, and "Reynard," for jackal, is characteristic of the conventionalizing which prevents the book from becoming a useful addition to the science of Æsopology, if one may so name this subdivision of mythology. But children enjoy the stories, and perhaps this is all the collection was made for.

We have received from Henry Frowde the second and concluding volume of Mr. C. L. Shadwell's 'Registrum Orielense,' which carries down the list of members of Oriel College, Oxford, from 1700 to 1900, the former volume having covered the centuries 1500-1700. For the particulars obtained in the college books the account of each member is practically exhaustive. The College has undergone the usual social change, and the obliteration of distinctions has, in the editor's view, been greatly aided by the rise and spread of athletics, which identifies "the whole body with the success or disgrace of its representatives on the cricket field or the river," and so helps "to stimulate college patriotism." In former days, students from abroad were compelled to deposit a larger sum in "caution money" than native residents, and Ireland was placed in this category along with America. The index contains many familiar names. Here is the father of the Froude family, with the historian and his two brothers Hurrell (Richard and Robert) Froude; here the two Mozleys, J. B. and Thomas, of Tractarian renown. Blanco White was an Oriel man; so was Thomas Hughes, and conspicuously Cecil John Rhodes. The Buller family has frequented the College. There is one (a late) instance of Parnell; several Wilberforces occur in the period 1820-1840, and four Pepyses, 1823-1893.

Prettily made at the Clarendon Press, M. Charles Bonnier's 'La Lignée des Poètes Français au XIXe Siècle' announces a new theory of selection. The book is to show the derivation of poet from poet for a century by choosing those quintessential stanzas and lines, often few, in which this filiation is apparent. Practically the book consists of a running comment, poet by poet, interspersed with selections often only of a few lines. Thus, in one way or another, all the French poets from Lamartine to Verhaëren are represented. The Symbolists, in fact, have a majority of the forty pages. An essay on rhyme by the editor completes the booklet. No one who wishes forty pages of scraps of the best French verse of a hundred years past need hesitate because of its ambitious pretensions to buy this little book for pocket service. M. Bonnier's doctrine, like Spenser's allegory, won't bite.

There are many great treatises upon mental diseases, but 'A Text-Book of Insanity,' by Charles Mercier (Macmillan), is a small, clear volume, which should serve as a guide for pupils, and, as well, for medical practitioners who meet insanity casually. It is a book of discrimination, not of conduct. It teaches diagnosis, not treatment. The key to its method is the distinction drawn between forms and varieties of insanity. Form is the aggregation of symptoms presented at one time; variety is the specific course from beginning to end, usually associated with a recognized cause. Designed for use with the author's oral lectures, the book is nevertheless admirably fitted for independent study. But it has no index.

The first annual meeting of the National Association for the Study of Epilepsy was held in Washington in May, 1901, and its Transactions, edited by W. P. Letchworth, LL.D., have just been published at Buffalo. The State's care of these unfortunates is of very recent history in this country, so that this society is really doing pioneer work. That it is full time appears when we find that Connecticut has 542 such cases, and Ohio and Illinois about 4,500 and 6,000, respectively. The outlook for all not due to accident is very gloomy; but, however improbable recovery may be, humanity requires that organized and intelligent attention be given them. To enlighten and stimulate the public is the object of this association, which should especially appeal to those whose kindred are affected, and to the public-spirited. The usefulness of this handsomely printed volume, too, is seriously impaired by its want of an index.

The sixteenth volume of Mr. Charles F. Lummis's *Out West* (Los Angeles and San Francisco) reveals at a glance by its size the prosperous turn in its fortunes. It now bulks 700 pages, replete, as usual, with pictorial illustration, articles on Pacific Coast localities, translations of inedited documents in early Western history (like the Diary of Junípero Serra), notices of the aborigines, poetry, fiction, and politics (in the editor's own "Lion's Den"). There is a striking portrait of the late C. P. Huntington; another, quite Rembrandtesque, of John Muir, who is also shown standing "at home" in the open. *Out West* is the organ of the "Sequoya League," "to make better Indians and better-treated ones," President Jordan, of Stanford University, being president once again, and surely to his honor. Sequoya, we are reminded, was "the American Cadmus," "the only Indian that ever invented a written language." This Cherokee's name has long been associated with the big trees of California.

"Magyar Types" is a collection of ethnographical half-tones, published by Dr. Johann Jankó, under the auspices of the Royal Hungarian Ministerium für Cultus und Unterricht (Budapest). A German text of introduction and descriptions accompa-

nies the Hungarian. In view of the fact that, on the basis of language, ethnologists rank the Magyars, together with the Finns, as of Mongoloid stock, the importance to science of any exhibitions of the physical type of the pure Magyar is at once apparent. The present collection is far more extensive and exact than Ripley's in his 'Races of Europe.' The effort has been made by Dr. Jankó to fix upon districts "whose population is homogeneous historically, linguistically, and ethnographically," and there to collect his types. The photographs he has reproduced are labelled scientifically under the items of name, occupation, age; color of eyes, hair and beard; shape of nose, stature, circumference of head, and cephalic index. The subjects are all peasant farmers, and the most noticeable physical feature is that of pronounced brachycephaly. This is sometimes excessive (93.2 in one case), but is unaccompanied by any other consistently Mongoloid character. The half-tones are only passable, yet they serve their purpose better than a lengthy description could do. It is to be hoped that the series will be continued.

While our country has one well-endowed chair, and Great Britain five professors of Chinese, albeit meagrely endowed, the Netherlands have, in their State University at Leyden, a permanent chair of Chinese, which has been occupied by men of such illustrious names as Siebold, Hoffman, and Gustaaf Schlegel, whose products in the *Archiv*, the Japanese Grammar, and the publication *Toung Pao* are known to all scholars. Dr. Schlegel celebrated on the 27th of October the silver anniversary of his accession to the chair of the Chinese language and literature in Leyden University. Abundant congratulations from his admirers at home and in many lands, and from the learned societies of which he is corresponding member, flowed in upon him. He is appreciated especially for his keen insight and his invincible patience in the mastery, above all, of epigraphic problems. Born at Oegstgeest, near Leyden, he became in 1857 a student of Hoffman, and in 1862 was made an officer in the Chinese School in Batavia. He received his doctorate in 1869 from the University of Jena. He served from 1867-1872 on the commission for revising the civil code of laws for Netherlands India. Returning to Holland, he entered his university in 1875, and in 1877 was made full professor. Over 200 monographs or notable articles in profound Chinese scholarship, some of them solving problems which others had given up, have issued from his pen.

The Association for Promotion of Scientific Research by Women announces that applications should be received before March 1, 1903, for the American Women's Table at the Zoölogical Station at Naples. Application blanks for the use of candidates, items relating to the expense of living at Naples, and full information as to the advantages for research at the station, may be obtained from the Secretary, Cornelia M. Clapp, Mount Holyoke College, South Hadley, Mass.

—Professor Byerly's paper, "Raise the Standard of the A. B. Degree," Prof. George F. Moore's on "The Field of an Undenominational School of Theology," and Prof. J. H. Wright's on "The Printing of the Doctor's Dissertation," all in the current *Harvard Graduates' Magazine*, deserve the attention of the college and university world So does the caustic conclusion of a little note in vindication of an early Harvard oarsman and coach: "There shone conspicuous and undimmed his own high standard of what a college athlete should be and represent; a standard which may well be taken to heart in these days when, under a multiplication of rules and regulations considered necessary to secure athletic honesty, a man may not safely enter into an athletic contest except upon advice of counsel, and performance on the field or river may not be accepted until the case has been argued." As for Harvardiana proper, noticeable are the portraits of five Harvard men now ambassadors to as many of the leading countries of Western Europe; and the flashlight group of the Harvard Club at Japan, taken last June at Tokio. The magazine publishes some curious statistics of its own circulation. Dividing the classes still extant (from one living member upwards) into two parts (1829-1868, in which period only two classes had attained or exceeded 100 members, and 1869-1902, when membership has ranged from 111 to 477), it appears that the former counts 1,092 survivors and 427 subscribers; that is, nearly 40 per cent. show their interest in Alma Mater by supporting the magazine, and supply 16 per cent. of the total academic subscriptions. The division in question marks accurately enough the non-athletic from athletic Harvard.

—The naïveté of Miss Elizabeth L. Banks's self-revelation in 'The Autobiography of a "Newspaper Girl"' (Dodd, Mead & Co.) will shock many old-fashioned readers, but if they will persevere for a few chapters their prejudices against the writer will probably be as completely overcome as were Mrs. Lynn Linton's. In spite of their frank egotism, these memoirs have no affinity with books of the Marie Bashkirtseff and Mary McLane type; they are a straightforward record of battles fought and successes won. If Miss Banks had waited thirty years or so longer, the publication of her autobiography would not have threatened her with any disparaging comment, but in that case the book would have lost half its value, for it would have missed the opportunity of warning and encouraging those young journalists, especially women journalists, whose work has to be done in the same conditions as those here described. The future historian of nineteenth-century journalism will obtain more light from the story of Miss Banks's career than from many more pretentious volumes, especially through the contrasts it presents between the pursuit of this profession in London and New York. The general impression of the author's own ideals and practice is a most favorable one, with one disagreeable exception—the repeated evidences of her fondness for what are euphemistically called "white lies." There is proof enough here that Miss Banks is willing to make great sacrifices for the sake of principle, and it is a pity that her testimony should be marred by the disclosure of an imperfectly cultivated conscience in this respect. It is worth noting that, according to Mr. Stead, the American publishers of this autobiography have insisted on the omission of a chapter in which Miss Banks criticised a certain American lady philanthropist. The comparison of English and American editions of the same books seems likely to become soon as interesting a study as the collation of ancient manuscripts.

—'Observations,' by Mr. Dooley (New York: R. H. Russell), has attracted, naturally, less attention than the author's earlier volumes; but they seem to maintain fairly the level of the latter. The following is his reproduction of his friend Hogan's account of "up-to-date" geology, and the genesis of the Earth and Religion: "First 'twas a mere squdge in which ne'er a livin' thing could be found. This peryod lasted a few millyion years, and thin th' mush caked and become buildin' materyal, and threes grew out iv th' buildin' materyal an' fell down an' become coal. Thin the wather come—but where it come fr'm I don't know, f'r they was no God at the time—an' covered th' earth, and thin th' wather evaporated and left little pints iv land shtickin' up with ready-made men an' women occupyin' thim, an' at that moment the Bible begun." This, for abstract science, is good. The earlier political satire, such as that which described the relations of the late Administration with the White House pet cat "Goold Bonds," was more pungent, and at one time Mr. Dooley seemed likely to become a great political satirist; but he has the "defects of his qualities," and one of these is a lack of fundamental political conviction. His life on Archey Road, and his early training as a ward politician, were not calculated to produce this. To him Imperialist and Anti-Imperialist, Republican and Democrat, Mr. "Rosenfelt" and those who try to get offices from Mr. Rosenfelt (with the disastrous results graphically described in "White House Discipline"), are equally ridiculous. In fact, it is as an "all-round" humorist that Mr. Dooley shines. He belongs to the great class of those who live to make us laugh at ourselves in all our aspects. This attitude involves occasional satire, but of a kindly and what, to those interested in the fray, often seems aimless kind. In other words, when we are disappointed in Mr. Dooley we exclaim, "How have we and those who write for us fallen off since the days of Lowell!" When we enjoy his 'Observations,' we remember that, from the days of Aristophanes down, pure humor has been without *parti pris*.

—The 'Compiled Statutes of the United States, 1901,' is the title of a work in three volumes and over four thousand pages, just issued from the well-known legal press of the West Publishing Company (St. Paul). It embraces the statutes of the United States of a general and permanent nature in force March 4, 1901, and incorporates under the section headings of the Revised Statutes the subsequent laws, together with explanatory and historical notes. The author of the compilation is John A. Mallory, whose work on the Revised Statutes themselves and "subsequent experience" make him, the publishers say, "the best-fitted man in the United States to-day for the task of compiling the general laws." He has also had the assistance of "trained editors upon the staff of the publishers." The scope of the work is explained in a short preface, which we may condense as follows: Any one who wished to look up a point under one of the sections of the Re-

vised Statutes (before the appearance of the present publication) was obliged to search first the Revised Statutes themselves and then the various supplements, which supplements, however, "are nothing more than a condensation of the Statutes at Large," reproducing the statutes "in chronological order, not revised or consolidated." All these supplements had to be examined, "because many provisions contained in them, as well as in the Revised Statutes, have been repealed or superseded or amended (and often reamended) by later provisions." This new compilation, on the other hand, collects all the general laws, arranges them according to subject-matter, under the familiar titles of the Revised Statutes. To sum up the whole story, it contains "everything that should be included in a new revision if one were now to be made." Such a compilation should be a useful book of reference. It labors, of course, like all books of its class, under one disadvantage—it is not a Government publication; it has no legislative sanction, no official authority, and consequently is only "one more book." He who in preparing his brief is lucky enough to have it at his elbow may be saved much labor, but it will not dispense him from the duty of looking through the Revised Statutes, or the supplements to the Revised Statutes, or, we may add, through current legislation subsequent to both Revised and Compiled Statutes. Voluminous indices and tables, nearly six hundred pages in extent, crown the work.

—The 'Jeanne d'Arc' of Mr. T. Douglas Murray (McClure, Phillips & Co.) will be made welcome in many a college library which is prevented by poverty from buying the rare and expensive volumes of Quicherat. The Maid of Orleans already has her numerous biographers, and Mr. Murray's name does not go to swell the list. His function, though apparently more modest, is none the less important, for he turns into plain English and presents in accessible form the most remarkable documents which are connected with her career. Every one knows that, some time after her capture, Joan was tried at Rouen by a special tribunal and found guilty of being "boastful, foolish, treacherous, deceitful, cruel, bloodthirsty, seditious, blasphemous, undutiful, rash, a fatalist, uncharitable, idolatrous, schismatical, apostate, and finally a heretic." This unpleasant list of epithets meant, of course, that she should lose her life, and burned she was, as all the world remembers. But probably all the world does not remember that the *procès-verbal* of her trial was exhumed by Jules Quicherat and published at Paris in 1841, under the title, 'Procès de Condamnation et de Réhabilitation de Jeanne d'Arc.' The death sentence was pronounced in 1431 and execution immediately followed; but twenty-four years later, when the English had been driven out of the country and the French nation was at liberty to feel a sense of gratitude, another court declared that, after all, Joan was no heretic. This second tribunal met under papal sanction in the cathedral of Paris, and, like the first, left definite record of itself. The evidence which led to rehabilitation or official whitewashing survives in the MSS. of the Bibliothèque Nationale, and may now be had, as well as the first batch of evidence, from the pages of Mr. Murray. The Latin text of Quicherat has thus been translated, made into a single volume, printed handsomely, and interspersed with excellent illustrations. Mr. Murray contributes a short introduction, but his labors have been chiefly confined to note-making and the preparation of an English version. One characteristic of the original evidence is the crabbedness and abruptness of its style. Mr. Murray's translation makes the text run somewhat more smoothly than the examiners, Joan and the reporters have left it, but such variation as we have noticed in the course of a short comparison does not constitute a blemish. Altogether it is a very useful piece of work, and well worth the doing. For one thing, it makes available a splendid body of data relating to the Hundred Years' War; for another, it shows exactly how a mediæval trial for magic and heresy was conducted; but chiefly it enables those who are unfamiliar with Latin to realize the depths of a tragedy that outruns the fancied pathos of "King Lear."

## A NEW AMERICAN ENCYCLOPAEDIA.

*The New International Encyclopædia.* Editors: Daniel Coit Gilman, LL.D.; Harry Thurston Peck, Ph.D., L.H.D.; Frank Moore Colby, M.A. Vols. I.—III. A—Canada. New York: Dodd, Mead & Co. 1902.

It is well known to how great an extent American encyclopædias have been based on one edition or other of 'Chambers's Encyclopædia,' which in its turn was based on the 'Conversations-Lexicon' of Brockhaus. The use made of 'Chambers,' and the extent to which it was spoiled—in both senses of the word—varied with the skill and space of the plunderers, but the trail of the booty was everywhere, and reproachful ghosts haunted and haunt many alien pages. In this there was some poetic justice, though little commercial honesty; Chambers had confessedly translated much from Brockhaus, and the American editors—yet without confession—reconveyed the stolen property. But such gains seldom prosper their new holders. In this case the articles taken over were variously maltreated, abbreviated, edited, to suit the American public and to give space for the dealing with peculiarly American rubrics. The result was that the user of such an encyclopædia felt driven at every turn to examine whether he might not find in Chambers the original and unmutilated article, reserving his American reference for American things only.

But the Germanizing of our educational tools goes on steadily, and think what we may of German scholars as men of letters in an ideal sense, there can be no question of their absolute supremacy as journeymen of letters, as patient compilers of exactly sifted and verified fact. While the German philosopher and critic has the reputation of intense subjectivity, of a power of accepting as certain his own personal and momentary impressions, the German hack-writer—using the word in no opprobrious sense—has a power of objectifying and putting into compact form the certified results, no more and no less, of any scientific investigation. His presentation of these results may be bald, clumsy, involved; but to the reader who takes time to read carefully, the matter is all there. Of such men are the writers in Brockhaus and Meyer, and in imitation of them and their methods there is assuredly great reward. Similar is the ability of the German editor. His labors and responsibilities are great. His contributors must be anonymous; otherwise they would feel it necessary to frame theories of their own and make new contributions to knowledge in their articles, and, for such, an encyclopædia should have no place. Being anonymous, the responsibility for their work rests upon the whole book; each part depends upon each and will be judged with it. The editor must see to it that the articles are sufficient, that they are properly divided, correlated and proportioned. When they are inadequate, he cannot shield himself behind the great names of the writers; for that the whole encyclopædia must suffer. It is therefore plain that an encyclopædia arranged on this plan must have at its service a staff of conscientious, laborious, learned collaborators, and an editor or editors of autocratic powers, truly encyclopædic knowledge, endless patience, and sleepless vigilance—especially the last. In Germany, under German conditions, and in view of the German character and peculiar abilities, these things are possible. It may be doubted whether with us, even at a prohibitive price, a Meyer or a Brockhaus could be produced.

The present encyclopædia starts with a preface of promise: it is practically to furnish an English Brockhaus. The prospectus goes still further, and gives an extensive list of contributors and editors of departments. This list undoubtedly shows up well, but the fact remains that, on the unsigned principle, it is impossible to say who individually is responsible for any particular article. Thus, on the one hand, if an article is criticised, the blame must be distributed over many eminent names, and, on the other, if the encyclopædia as a whole is criticised and its publishers blamed, they can point triumphantly in their defence to the same eminent names. What better could we do? they may ask; to which the public can say little, but can have its own opinion of the whole affair. To bring all to a point, absolute anonymity and the responsibility frankly shouldered by the publishers is the sole alternative of signed articles and the responsibility of the signer.

Accepting, however, the articles as anonymous and impersonal in the full German sense, the great weakness of the present work is undoubtedly in the editing, major and minor. There are certainly scholars in the country equal to this great argument. The problem was to find them, to set them properly to work, to see that they did the work, and to reproduce accurately their results. To a great extent they have been found, to a lesser extent their tasks have been properly assigned, very often they have not been kept up to their true standards, and most generally their results have been carelessly reproduced. The last—the proofreading—is glaring throughout the first two volumes; in the third a considerable improvement appears, though errors still continue. As specimens may serve (vol. i., p. 53), "unfriendly" for friendly; (p. 139), "public persecutor" for prosecutor; (p. 232), "Tiruskohi" for Firozkohi; (p. 288) "Compluum" for Complutum; (p. 308) "picturesque" for picaresque; (p. 342) "al-jozair" for al-jazair; (plate of alpha-

bets opposite p. 392) Hebrew letter Tsade for Ayin; (p. 431) the article on Ambrose's Tavern is completely pied by the omission of a line or lines; (vol. ii., p. 41) "Kilbrennan" for Kilbrannan; (p. 311) article Babbage, another case of repetition and omission of a line; (p. 489) "Jarfar" repeatedly for Ja'far; (p. 679) "largest the" for largest and; (p. 705) no capital to "Polish"; (p. 737) "Mzabit" for Mzabite; (p. 70) "Mysterionun" for Mysteriorum; (p. 771) "*signalments*" for *signalements;* (p. 808) "collected" for collated; (p. 812) "Rhenish" for Rhemish; (vol. iii., p. 280) "Lazarde" for Lagarde; (p. 398) "Greeks" for Gauls; (p. 503) "with out religion" for "with our religion"; (p. 536) "Ancram" for Ancrum; (p. 682) "Bard" for Barb; (p. 729) "Ballick" for Balliol. This list could be very easily extended. It is not based on any systematic search, and does not take account of simple misspellings of English words.

To return to the contributors: many of them have done their work excellently. This holds especially of the articles on chemistry and anatomy—indeed, on natural and physical science generally—on mathematics and psychology. The last is of the modern type, and the articles on it contrast often with those on the lives and systems of different philosophers. Thus, that on Berkeley is not in the same class with the corresponding article in the last edition of Chambers, nor is that on Bentham. Generally, it may be said that biography, while very broad, is not very full, very accurate, or very attractive. The number of entries is enormous, and the assertion that this encyclopædia is unique on that side may easily be correct. But, in comparing these biographies with those in Chambers, there is hardly a case where the present book is not the poorer. This stands out the more clearly the more important the biography is. Especially in literature, there is nothing here that can stand beside the carefully written studies which are the distinction of the Edinburgh work. This is the stranger because, in the preface, the editors repudiate what they call "the encyclopædic style," and profess to have urged upon their contributors that lighter and more personal touch which "would characterize their contributions to any literary publication of a high class." We can only entreat them, with an open mind, to compare their productions on Aristophanes, Beaumont and Fletcher, Burns, Byron, Sir Thomas Browne, Boccaccio, almost any figure in literature, with the corresponding article in Chambers. Disproportion is another defect conspicuous in these biographies. It cannot be regarded as happy that Calvin has nearly four pages, with an addition of a page and a half on Calvinism, while Byron has one and a quarter, Burns a little over one, Augustine two, and Athanasius one—exactly the same as Richard Baxter and H. W. Beecher. Again, Sir Walter Besant and Mrs. Besant have practically the same space, each of less than half a column, while Bhartrihari, a Sanskrit poet of not exactly the first rank, has a column and a half. This is evidently due to weakness or carelessness on the part of the editors. Their writers were not held in hand, and each got practically the space which he claimed. The same disproportion appears in other subjects. Thus, Anemometer has nearly two pages—is worth as much as Augustine!—and Blindspot has nearly a page and a half. The theatre has also secured to itself much space. Dion Boucicault has a column, and the latest actor or actress is secure of a generous mention. Music has a better claim, and has been even better treated. Beethoven has four pages, Bach three and a half, and the general articles are full, and for the most part good. Beethoven's personality, it is true, might have been treated more sympathetically, his friendships less flippantly, and his place as the highest exponent of the classical and the prophet of the romantic in music could have been more clearly shown. This is one of the articles where the finer touch is missed. Nor are absurd blunders lacking. Under Andante we learn that *con moto* means "with emotion," misinformation derived straight from Chambers, which had nodded for once. Again a case for editorial vigilance.

Military matters have the fulness which suits this militant age. There is the inevitable complacency over the army of the United States; but the only serious defect is under Armies, where the part played by the Byzantine Empire in developing military science is unrecognized. If this writer will consider how long the Eastern Empire kept Mohammedanism at bay, he will find a very curious problem in the art of war.

The articles dealing with Asia are of an uncertain value. The Aryan East in general, and in especial the Iranian, is good, sometimes even too full for proportion. The Semitic East, on the other hand, is generally weak, inadequate, and inaccurate. Thus, the contrast is very striking between the sections on Assyrian and Babylonian art and architecture, which are good, and the general articles on Assyria and Babylonia, which are very poor. The same holds of Arabic rubrics, which are often most carelessly handled, and of those from the Old Testament, which are highly unequal. Throughout, the masterful hand of an editor is called for. New Testament articles are much better, but short. The great twenty-four-page article on the Bible is highly composite, and equally irregular in merit.

Already it is evident that Art and Architecture have fallen into competent hands. The development of this side of the Encyclopædia may be awaited with genuine interest. In geography the same fulness is being attempted as in biography, and with the same uncertain results. For America, the articles will be useful; for other countries, Meyer or Brockhaus will probably be consulted. A department new to general encyclopædias but of justifiable existence is that of fiction. Unfortunately, characterization has been attempted besides mere localization. Almost of necessity this has resulted in a singular crudity. Nor are omissions and errors lacking. The 'Bride of Lammermoor' is "further described as a legend of Montrose"; the 'Black Dwarf' is "founded on a Scottish legend" in evident oblivion as to the real David Ritchie, and one of the Amines in the 'Arabian Nights' is combined with the sister of another.

Finally, the following farrago of notes may not be out of place. There are many articles in which it would have been better to reproduce Chambers entire rather than mutilated. So Alchemy and Allotrophy, though the latter has been rewritten; Alloy, on the other hand, has been improved. So, too, Bells, which omits all reference to the modern tubular kind; Bentley, which misunderstands his plan for the restoration of the text of the New Testament, and disregards entirely his unique edition of 'Paradise Lost.' Further, on Andorra, Chambers has been misunderstood, and the little republic put "under the joint protection of France and Spain." As a matter of fact, its relations are to France and to the Bishop of Urgel; thus, in the last instance, to France and the Pope. The origin of the article Berber is not so simple, but it would have been at least safer to abide by Chambers, and not to have equated βάρβαρος with "foreign, alien," instead of "stammering, uncivilized"; the latter is also the meaning of the Arabic term cited. Under John Anderson, the institution which he founded by his will is strangely misrepresented. A reproduction of Chambers would have shown its almost unique character, at the end of the eighteenth century, as a college for workingmen. It still exists, but has never called itself a "university." Into Archpriest it would also have been well to incorporate Chambers or an equivalent; the article here gives only one small side. Al-cazar is from an Arabic singular, not a plural; the error may have come from a confusion with the origin of Luxor. On Arran, any one who had been in Brodick Bay during an easterly gale would hardly call it an excellent harbor. It is an open roadstead. The date of Beckford's birth is left uncorrected. We now know it was October 1, 1760, not September 29, 1759. The discredited legend of the origin of 'Vathek' is also given without comment. Yet the bibliography added to the article, if examined, would have yielded these very corrections. The same thing occurs elsewhere. Beitullah (ii., 665) *is* the Kaaba, and does not contain it. On Bonnivard (*sic*) we find the old account of that most unedifying "patriot" which would have vastly amused him; the bibliography is absurd. But still more absurd is that attached to the notice of Bertrand de Born. There we are referred to that veracious chronicle, Hewlett's 'Richard Yea-and-Nay.' Simple inadequacy is what ails the article on Beruni. The greatest master of scientific method among Mohammedans, a man standing alone in his time, is cleared in nine lines and some blunders. Contrast the treatment noticed above of Bhartrihari; the Sanskritist evidently fought harder for space than the Arabist. In the article on Andree there is no knowledge of his fate; similarly, Lord Acton and E. Ashmead-Bartlett are still alive. Dr. G. F. Moore, too, is given as President of Andover Seminary.

There can be no doubt that the blame for all this lies primarily with the editors. Excellent contributors have been found for many subjects, and could be found for all. But all contributors require to be kept up to a certain standard; their work requires to be proportioned, concatenated, polished, which is the sphere of the editor. In these volumes the editors have not filled their sphere. From planning to proofreading their work has been slipshod. Further examples of this are easy to find. In the alphabetical order the Arabic article *al* is sometimes reckoned, sometimes not. Thus we find al-Farabi under A and al-Beruni under B. Again, in volume i., pp. 26, 27, under Aberdeen and University of Aberdeen there is a considerable repetition. Similar-

ly, in volume iii., pp. 536-539, under Elspeth Buchan and Buchanites, and pp. 815, 816, under Richard Cameron and Cameronians. In volume ii., pp. 669 and 693, we have an unexplained difference of spelling between Belerium and Bellerium. The two possible derivations are not recognized, and the articles are left in contradiction. At least one diagram (volume i., p. 340) is equipped with letters to which no explanation is added in the text. In bibliography, again, the lack of editorial care is conspicuous. To some articles an excellent bibliography is appended; in others not a single authority is cited, and the reader is left in a blind alley. It need hardly be said how fatal is such a defect; in a confessedly general encyclopædia such as this, references should be given freely to books, journals, and specialist cyclopædias. The same holds of the illustrations. Apparently if a contributor demanded certain illustrations, he got them; if not, there was no more about it. As a consequence, the number of small cuts in the text should be greatly increased. For these we would willingly sacrifice the numerous reproductions of celebrated pictures, portraits, statues, etc., beautiful as they are; for such things there should be no place here. Under Alps a special map would have been much more to the purpose than the very pretty picture of Chillon and the Dent du Midi. The maps in general are disappointing. How the opinion could be hazarded (preface, page viii.) that "the illustrations of every kind will be found superior to anything hitherto attempted in any encyclopædia" must remain a mystery. Except as beautiful pictures, they cannot compare in number, usefulness, and attractiveness with those in Meyer.

It is with deep regret that this judgment is passed on a work like the present, with its enormous expenditure of labor and wide sphere of possible usefulness. But only four volumes are published (the last as we put this in type), and the door of repentance for the editors is still wide. By free cutting of the stereotype plates and unwearied vigilance as to the text still to come, much may be done and undone, and a good encyclopædia may yet be produced.

## THREE BOOKS ON ARTS RELATED TO ARCHITECTURE.

*A Discussion of Composition;* Especially as Applied to Architecture. By John Vredenburgh Van Pelt, Professor in charge of the College of Architecture, Cornell University. Illustrated by the Author The Macmillan Co. 1902. Pp. viii, 275.

*Windows:* A Book about Stained and Painted Glass. By Lewis F. Day. Second edition. London: Batsford; New York: Charles Scribner's Sons. 1902. Pp. viii, 419.

*Furniture of the Olden Time.* By Frances Clary Morse. The Macmillan Co. 1902. Pp. xvii, 371.

The title of the book first named above is so far inadequate that the treatise in question reaches out to include all the elements of design. The first part, consisting of forty pages, deals with the essential characteristics assumed to be necessary in design—sincerity, carefulness, and the like. The second part, of forty-four pages, deals with the principles of composition and the more usual forms of composition, as in pictures, and this part may be thought to have furnished the title to the work. Part three is concerned with the decorative application of principles already laid down, and also with general principles assumed to be obviously of importance, to be axioms of design. Part four has to do with "Practical Suggestions in Design," and in the thirty pages of which it is composed there is little suggestion of the importance or character of composition in the design, which is treated in relation to structure and material, and sincerity, or the reverse. Parts five and six deal with the plans of buildings, and mingled with this is much discussion of that curious theory, born of the atelier and its "paper work," that a plan as drawn on paper is of some value by itself. In reading this, we have to remember that our author is the head of an architectural school avowedly based upon the teaching of the great Paris institution.

In such a book of practice, with necessarily brief and peremptory statements, and written, as this one is, by a very intelligent man, there will, of course, be many valuable suggestions. Just as there are scraps from Ruskin full of that brilliant good sense which that writer is capable of, and which he gives his readers in alternation with paradox and bad logic, so there are many quotations in the original French from the treatise on Decorative Composition by Henri Mayeux. So G. Baldwin Brown is quoted for the value of prehistoric monuments, and Henri Deglane for the scarcely necessary assurance that you had better carry a sketch-book about with you and draw continually with a soft pencil, using few lines. In like manner, the author's own conclusions are printed side by side with the dicta of his teachers and guides; and the passages so arranged are separately of value, or at least have the possibility of value. One looks in vain for a statement of general principles, however; and, without denying for a moment the immense difficulty of arranging a book of maxims in accordance with any general principles of thought, the question still remains unanswered whether such treatises can have any importance. And yet the book is full of the evidences of knowledge and of a sound feeling for fine art in many of its forms. It is not easy to forgive a positive assertion that the Sainte Geneviève paintings in the Pantheon of Paris are very ugly, nor to admit the force of the quotation from Herbert Spencer, a writer whose greatness need not blind us to the fact that he never looks at fine art from the inside, but treats it as a branch of science. On the other hand, there is an excellent passage (pp. 169 to 177) in which decorative glass, as in modern and ancient windows, is explained; and it may be stated that this is a subject which is very seldom treated with intelligence. It is an odd comment upon the architectural tendency of the twentieth century that, in the discussion of Planning (part vi.), eight pages are given to dwelling-houses and sixteen pages to buildings used for instruction, while only a page and three-quarters at the very end are devoted to "ecclesiastic buildings."

Mr. Day's book on Decorative Windows is fortunate in its title, all things being considered. The phrases "stained glass" and "painted glass" are each of them very inadequate, and erroneous in making a part stand for the whole; and to couple these terms together under the fitting general term is a good thought. The matter of decorative glass is, as remarked above, extremely difficult to treat. No illustrations can adequately explain it except to the most highly trained observer. And of this fact there is proper mention made in a prefatory note, page ix. Again, words are apt to fail in describing the purpose of the design in glass, and, of course, in criticism of the designer's achievement. Now, as the author of the volume before us has seen all those difficulties very clearly, and knows well how glass was made and used in early times, and how the modern processes have grown up—always excepting those American methods of which he knows only the feeble beginnings, as is natural—it follows that the book is sure to have value to any person who is in earnest about the study of the subject. Whether one approaches the matter of rich windows from the point of view of the student of glass and glassware, as a specially interesting industrial art; or as a matter of decorative design, as a mosaic helped out with painting; or whether it is as a part of ecclesiastical architecture that one is thinking of the mediæval glass at least; or whether the painter by profession is interested in the strange facts of the radical difference between colored work in translucent material and that upon opaque surfaces and seen only by reflected light—in any of these cases he will find that Mr. Day has seen the difficulties and the remedies, and has put them before himself and before his readers.

To infer from this that the volume is wholly satisfactory would be to infer too much. Book i., ninety-five pages long, is devoted to craftsmanship; Book ii., containing much more than half the volume, deals with the "course of design"; and Book iii., eighty pages more, deals with various subjects, such as "story windows" (with a sort of list of windows in Europe that are worth seeing), and has a final chapter devoted to the restoration of old glass. There are two indices, one to the text and one to the illustrations; the latter organized alphabetically, as is the former—an innovation indeed, and worthy to be noted. Were such an index a common feature, it would make of the twentieth-century books, with their abundant illustration by photographic process, an iconographic cyclopædia. It is of less importance, to be sure, in the present work than it might be in another, because the examples given are fragments in very many cases, as indeed is natural. You turn from the item "Reims" and find a square of a clerestory window—a piece perhaps three feet high and not quite four feet wide; hence the knowledge of its location, even in a church as important as the great cathedral of the town named, is of less consequence. On the other hand, the references from "Gouda," six in number, lead you to whole windows, and this is the more satisfactory inasmuch as no pictures of those very remarkable Dutch windows of the seventeenth century are easily accessible.

A decorative window is a mosaic of translucent material, with this peculiarity, that the translucency is interrupted by relatively broad opaque lines made by the "leads"

which hold the glass together. This mosaic may be of one color, with only such modifications as inequalities of the thickness or staining of the glass may cause. On the other hand, it may be of many colors and produce a very elaborate, jewel-like pattern. Again, the mosaic may be, and very commonly is, helped out by painting, and this painting is nearly always of opaque substance, strong, dark-brown pigment, which, unless thinned out into the slightest smearing, stops the light completely. This painting, then, is used to turn a patch of colored glass into a smaller patch of definite shape; a square or a diamond has its borders so painted over that a hand or a flower is left, the light being "stopped out" from the rest of the piece of glass, so that the translucent part assumes the form desired. There is, indeed, a painting with translucent enamels, but only one important style of work has ever been based upon this method, and modern practice ignores it in nearly all cases; for, although every artist who undertakes important windows experiments a little with enamels, every such artist finds the result so unsatisfactory that it is kept in use almost exclusively for the flesh—the heads and hands—and these are the least valuable parts of modern work. All this is to be found in the book before us, but it would be too much to say that it is made perfectly easy of understanding to the beginner. Perhaps what has been said here will show the difficulty there is in any such undertaking.

The book on Furniture (named above) is the fourth contribution, published during the last two or three years, to the accumulating mass of fact and comparative criticism concerning the older styles of furniture known to the residents of what is now the United States. There is no attempt to go back to times so "olden" that the forms of the Middle Ages or the Renaissance appear; the oldest piece illustrated is of the seventeenth century, and the greater number of tables, arm-chairs, clocks, and bedsteads is of the eighteenth century, and of styles which continued for a few years into the epoch that followed. We have, then, a book upon "Old Colonial" furniture and nothing else; and the accompanying illustrations are altogether similar to those in the three other books to which allusion has been made; but the illustrations are numerous and good, while yet the book is smaller and much less expensive than either one of the previous works, and therefore may be thought to have its place to fill. It is probable, no doubt, that some of the same pieces already illustrated are presented to us here. There are a few tallboys (called high-boys in the book before us) and arm-chairs which are so well known to all the students of this interesting branch of the collector's hobby that a book can hardly be made up without an attempt to secure one of them. Certain collectors in New England, in New York State, and in the South are known to possess specimens of indubitable authenticity and good preservation, and these are constantly in demand for exhibition or illustration.

The book is divided into twelve chapters, each appropriated to one class of furniture, as chapter v. to desks, chapter vi. to chairs, and so on. More originality is to be found in chapter x. ("Fires and Lights") than elsewhere, for there are here a series of pictures of fireplaces, the andirons that belong to them, the fenders set in front of them, the decorative objects commonly seen upon the mantel shelves, along with the lamp-stands and candelabra, the lanterns and sconces, which gave more available light than that of the fire to those who sat by it. Looking-glasses, too, have a chapter to themselves, and a pleasing and very diverse assortment of these is shown, giving to the student a wide range for motives of design.

## STEPHEN'S BIOGRAPHICAL STUDIES.

*Studies of a Biographer.* By Leslie Stephen. Vols. III. and IV. (Second series.) G. P. Putnam's Sons. 1902.

These latest volumes from the pen of the man who is likely long to be remembered as the biographer paramount of English letters, are delightfully characteristic. The essays of which they are composed are review articles written for the magazines—rather appreciative and discursive than in any strict sense contributive. In them, therefore, is shown, more clearly than in most of Mr. Stephen's recent writing, that tincture of personality which gave so ripe and mellow a charm to the well-remembered 'Hours in a Library.'

One does not turn to Mr. Stephen's books for the carefully involute, analytic, literary criticism which is coming in fashion. The salient quality of his mind is the ripe humanism of the imaginative biographer. His chief concern in reading a book is communion with its author; and he gets at the nature of the author only in exceptional cases by the set process of analysis and deduction which others use. His method is rather one of genial sympathy, guided by an inductive instinct so trained and habitual as to have become, to all appearance, quite unconscious. This procedure with men not wholly antipathetic to him has yielded some very suggestive appreciations. When these appreciations have been expressed in Mr. Stephen's singularly vigorous and lively manner, vitalized (but never vulgarized) by colloquialisms and vivid personal interpolations, the result is a group of essays of exceptional import and pleasurableness.

As it happens that, in the second of the volumes under review, several topics of the highest interest are treated, we can deal but shortly with the other, merely tempting the reader to its perusal by noting that it contains characteristic comments upon the Browning letters and Godwin's Novels, studies of Donne, Ruskin, Bagehot, Huxley, and Froude, and a happily rambling essay "In Praise of Walking." The nature of the subject in several of these papers gives scope to certain deep-seated predilections and antipathies that were familiar to readers of Mr. Stephen's earlier work, but have been somewhat less conspicuous of late. In the trend of the papers on Bagehot, Ruskin, and Huxley, as well as in those brilliant, mocking asides which are the most striking feature of his style, Mr. Stephen shows a respect for the reserved judgment and a profound distrust of all dogmatic theory, whether in literature, philosophy, or theology, which tend to give his work an air of scepticism as pervasive as Montaigne's. At times, even, we think him in danger of tripping into that *humorous fallacy* which ought to be catalogued as the complement of Ruskin's famous tag—the feeling that whatever can be subtilely derided or openly mocked at is necessarily of dubious validity and worth.

The leading essay in the second of the two volumes now in hand is a notable study of "Shakspere as a Man." Breaking his own desiderated rule, that no one should write about Shakspere without a special license, Mr. Stephen offers us the sanest of essays upon that over-written subject. By a process of cool, consecutive inference not common in such matters, or in these volumes, he constructs a "character" of Shakspere which is, so far as it goes, quite convincing. His summary of the philosophy of living to which the dramatist was constrained by the bent of his character and temperament, is in itself so suggestive, and contains such a note of consonance with much in Mr. Stephen's own views, that it may be fitly quoted here:

"Be a Romeo while you can; love is delightful when you are young; only think twice before you buy your dram of poison. As you grow older, be a soldier, a hero, or a statesman, or, if you can be nothing better, be a playwright, so long as the inspiration comes with spontaneous and overpowering force. But always remember to keep your passions in check, and don't forget that the prize, even if you win it, may turn to ashes in your mouth. Fate is always playing ugly tricks, punishing the reckless, and exposing illusions. The struggle is fascinating while it lasts, because it arouses the energies; but when the energies decay, the position which it has won loses its charm. Literary glory, though one may talk about it in sonnets, is a trifle. Your rivals are many of them very good fellows, and make pleasant society; it is both pleasant and prudent to be on good terms with them, and nothing is so contemptible as the rivalry of authors. But, after all, success only means a position among jealous dependants of great men, who themselves are very apt to get into the Tower and even to the scaffold. When youthful passions have grown feeble, and the delight of being applauded by the mob has rather palled upon one, the best thing will be to break one's magical wand and sit down with, we hope, 'good Mistress Hall' for a satisfactory Miranda, at Stratford-upon-Avon. Though we can no longer write ballads to our mistress's eyebrow, we can heartily appreciate gentle, pure, and obedient womanhood, and may hope that some specimens may be found, while we still enjoy a chat and a convivial meeting with an old theatrical friend."

This is surely an excellent likeness of the man; yet it fails a little to suggest the genius. There are some of us who cannot help believing that the greatest of tragic writers was more passionate about the larger and fateful issues of life than would appear in such a picture of his mind.

To Emerson Mr. Stephen, though a professed "Lockist," gives a surprisingly sympathetic essay. Certainly, all Emersonians will be interested, as Mr. Stephen hopes, "to know how their prophet affects one of the profane vulgar." Mr. Stephen can realize the thing that Emerson stood for to the America of his time. His queer, effective combination of Yankee shrewdness and Neo-Platonic mysticism is excellently portrayed. And it is a suggestive remark, that where Wordsworth was a man whom nature worship lifted at times into a "blessed mood" in which the burthen of the mystery was lightened and he could see into the life of things, Emerson was one in whom that "blessed mood" had become normal. Although the study as a whole partakes of the nature of a *tour de*

*force* of sympathy, its conclusion has the accent of long conviction.

"Emerson's mysticism . . . ," says Mr. Stephen, "reveals at any rate the man himself, the pure, simple-minded, high-feeling man, made of the finest clay of human nature; the one man who to Carlyle uttered a genuine human voice, and soothed the profound glooms of dyspeptic misanthropy; . . . nobody could be more fitted to communicate the 'electric shock' to his disciples, because of his keen perception of the noble elements of life, in superiority to all the vulgar motives and modes of thought, which were not the less attractive because he could not see his way to any harmonious or consistent system of thought."

From Emerson to Stevenson is a far cry, which Mr. Stephen takes with the ease of the practised hunter of men. In his dealings with Tusitala the "Lockist" is soundly in evidence. To the true genius of Stevenson, the supremacy of "mind-stuff" in him, the cling of his style, the valor of his spirit, Mr. Stephen is accessible and just. In his final estimate he expresses certain truly English considerations which have rarely been better expressed. Stevenson, he thinks, was "the rapid, vivid sprite, the natural Bohemian." And, as he observes very justly, "The Bohemian, . . . the the man who looks from the outside upon the ordinary humdrum citizen, may be a very fascinating personage, but he really lacks something." What it is that such an one lacks is not hard to see. It is, precisely, a ripe humanism—the result of kindly and reflective intercourse with one's fellows, seeking in them, even though they be fools and bores, the fellowship which inheres in "the general heart of man"—the trait, that is, which, partly by predisposition of mind, partly by his long labor among the human records of the 'Dictionary of National Biography,' is the conspicuous power of Mr. Stephen himself.

Illuminating, but less personally significant essays upon Southey's Letters, "New Lights on Milton," and Anthony Trollope, need not detain us. The final paper in the series is an undercutting comment upon M. Joseph Texte's recently translated 'Rousseau and the Cosmopolitan Spirit in Literature.' Neither M. Texte nor Mr. Stephen is much concerned with that comprehensive view which considers all Christendom as a single federation working out in an age-long travail a world literature. Rather, the point at issue involves that literary cosmopolitanism which, about the middle of the eighteenth century, appeared in the intellectual commerce of England and France. Without going to the lengths of that stout old Tory gentleman who held that "foreigners were fools," Mr. Stephen is inclined to discredit M. Texte's elaborate theory of the growing interinfluence of the North and the South: he is disposed to take refuge behind his bulwark of narrow seas, and assert the integrity of national literatures. He would not deny to them many cosmopolitan affiliations—such, for example, as the response which the sentimentalism of Richardson met with in the hearts of three generations of Frenchmen—but he would consider this the result rather of the apt expression of an international mood than of any blending or decay of racial types. It is, of course, quite impossible now, in mid-movement, to predict infallibly the direction and end of our literary progress. Mr. Stephen wisely leaves open the question of the effect of democracy upon letters. He recognizes that democratic literature "may represent wider sympathies and more genuine enthusiasms"; yet he also has a fear that will not down lest democracy may, in the end, come to mean a society in which the individual is lost in the mass, occupied with a petty round of interests, and "incapable of appreciating refinement or high intellectual powers." If such is to be the case, he thinks "there can be no doubt that literature also will become commonplace and vulgar, and so far alike throughout the world." The history of past republics scarcely tends to give ground for this belief, yet the difference between the past and the probable future of democracy is so vast that debate upon this point is beside the mark. Whatever the end, no one is likely to dispute that in its present literary manifestations "the cosmopolitan spirit" is a source more often of weakness than of strength. It is this state of affairs that gives importance to Mr. Stephen's sturdy reassertion of the impenetrability of the inner spirit of a national literature.

---

*Sundials and Roses of Yesterday.* By Alice Morse Earle. The Macmillan Co. 1902. 8vo, pp. 461.

Mrs. Earle gives reproductions of a selection numbering well over two hundred of her photographs of sundials, with a smaller number of those of roses, which, by the way, do not take so well. She has joined to the pictures first-hand information about the originals, has touched upon the subject of dialling, and glanced at sundry other topics *à propos de bottes*. The attractive element of the volume is the antiquarian-emblematic-poetical perfume that lingers about the dials. A charm there certainly is about almost any sundial. Still, something like a collector's mania must be added to the ordinary interest in sundials before a person can read Mrs. Earle's volume right straight through without flagging. She seems herself to feel that this is so, and endeavors to lend variety to the subject by chapters about roses, about Rosicrucians, about rural saints and prophets, with desultory passages not a few. But it is not the question whether a book has some dull pages or not, but how enjoyable it is at its best. As somebody says of a poet, it is not how many of his arrows go astray that counts, but whether any of them has struck the Dordonian oak, and sent a resounding shiver through all its limbs and branches. On the contrary principle, how many of the most delightful books—including all the old ones—would have to be condemned! It is always the reader's privilege to skip.

'Sundials and Roses of Yesterday' is much of it very interesting reading to anybody, and all of it to somebody. The authoress could not have furnished us with a livelier variety and still have described as many individual dials as she has done, without which the devotees of dials would have been dissatisfied. To our thinking she has been unduly afraid of being heavy and dry. As long, for example, as she deemed a chapter on dialling called for, why would it not have been better to procure its preparation from some adept in descriptive geometry? If Miss Charlotte Angus Scott or Mrs. Christine Ladd Franklin could have been persuaded to lend this help, the elegance of their exposition of a problem—after all, not so rebarbative as it may be supposed before being fairly scanned—would have added a new grace to the book. To be sure, as it is, two rules are given for constructing a horizontal dial, of which the first is neat, were the rationale of it only made plain. But there are no directions for any other form of dial than that least interesting, least beautiful—and we should add least useful one, were the ratio of zero to zero more intelligible. The second rule given in the book is intended to bring the art of dialling to the level of the comprehension of Southern plantation negroes, and is a deplorable failure. It not only requires the poor fellow to know what latitude is, but also to lay off an angle equal to that latitude. Neither requirement was necessary; and after all he won't get a good dial. Mrs. Earle tells of simple dials that give the time without danger of more than four minutes' error, as experience shows. But does she remember that the penumbra always causes the reading of the time to be about a minute too near to noon, an effect that diffraction considerably increases, while refraction always acts in the same direction and may add two minutes more to the error; that the equation of time sometimes exceeds sixteen minutes, and that the difference between local and standard time may be half an hour? Let all these act in the same way, as they sometimes will, and they foot up to more than four minutes; but, of course, the readings can be corrected.

Nowadays, when there are railway trains to catch and dentists to pay for any unpunctuality on our part in keeping our appointments with them, and the fashion originally set by time and tide of waiting for no man has been generally followed, the sundial has been degraded to an educational device. It is true that if, instead of observing a shadow, one observes an image formed by a lens, and observes it with a microscope, and, in place of the sun, uses a number of stars, high and low, correcting for level, azimuth, and collimation, then indeed our dial becomes a modern astronomical transit, and is the most precise possible instrument for correcting a clock or chronometer, though not exactly handy for direct use in catching a train. For that purpose, a good watch that has recently been compared at noon at any telegraph office is preferable.

Very tolerable clocks had for centuries been in common use when Galileo first watched the swinging lamp in Pisa Cathedral. Yet it was not until the nineteenth century that mean time (in contradistinction to every variety of sun time) came to be universally employed; and no mechanical clock or watch could keep pace with the inequalities of the sun in any satisfactory manner. Consequently, when we see an old wall dial, though its age be but two centuries, we may be reasonably sure that it had, in its day, an honest utility. It is an individual to be respected. But what, pray, is a horizontal dial in the garden of a modern gentleman of business but a despicable lump of affectation? Does he permit any member of his household, if he can help it, to esteem time of so little worth as to be measured out in hours?

The author's extreme dread of being dry

or heavy is illustrated in the chapter on Rosicrucians, concerning whom, she informs us, she has read very much, and concerning whom so little that is really solid has ever been written—enough, however, to make it the business of any chapter on the subject to present the proof that this brotherhood owed its origin to a lie concocted about A. D. 1600 by Johann Valentinus Andreä, alias Basilius Valentinus, alias Florentinus de Valentia, etc., and Johann Thölde of Frankenhausen. With all her learning on the subject, Mrs. Earle should have known that something like this was the case; but the glamour of mystery has been sweeter to her than the plain truth. From something said in the preface, we were led to hope that this chapter would be ushered in by a reproduction of the rare and fine bookplate of the "liebliche Bruderschaft des himmlichen Rosenkreutz" of Andreä and Thölde, with its view of heaven and hell. But we found only a decorative rose.

---

*Two on their Travels.* By Ethel Colquhoun. With eight colored plates, sixteen full-page and numerous text illustrations by the Authoress. A. S. Barnes & Co. 1902. 8vo, pp. xvi., 242.

The motive of this bride in describing her wedding journey is "to add a tiny bit of mirth and enjoyment from my own superabundant store to that of less favored folk." With such an aim, and in the full tide of that new happiness which invests even familiar scenes with an unwonted charm, she would have been successful if she had not left her native shores; but when it is "the golden window of the East" which she opens to her "shut-in" readers, their enjoyment is assured. She has other qualifications for her task, however, than that of an unselfish motive. Possessing both literary and artistic skill in an unusual degree, her bright, vivacious word-pictures are accompanied by numerous sketches, some of which in color are exceedingly attractive. Naturally she leaves the discussion of the serious topics which a journey in the East inevitably suggests, to her husband, the well-known traveller and author, Archibald Colquhoun, and dwells upon the trivial, every-day sights which, after all, constitute the chief enjoyment of a visit to foreign lands. Digressions, grave and gay, are numerous, but even when they take the form of severe criticism, as of American manners, an underlying mirthfulness is always evident. Altogether, 'Two on their Travels' has that indefinable charm which the companionship of an entertaining woman who has seen much of the world always gives.

After a somewhat startlingly familiar introduction of herself and "Andrew" to her readers, her narrative takes them from Singapore to Java, "the garden of the East," and from thence to Borneo, the Philippines, "the land of sunsets," and Japan, "the playground." She is mostly occupied with amusing descriptions of scenery, costumes, her fellow-travellers, life in inns and on the sea, and several adventurous experiences. Now and then there is a remark of a more serious nature, as that the Dutch in Borneo, "a country rich in oil, coal, diamonds, gold, timber, gutta, and many other valuables," seemed a great failure. "There is a sleepy, decadent, stagnant, rotting air everywhere." In the Philippines she is surprised at the size of the towns "and the number of good houses they contained. One provincial town has as many as four large churches, two colleges for boys and girls (all well built of stone), a theatre, made of wood but elaborately decorated inside to simulate marble, and a fine public building." The religion of the Filipinos is "little more to them than superstition and pageantry. At one place we saw one of the saints from the church, which, in honor of the Americans, had been rudely dressed to represent the statue of Liberty in New York harbor. Spikes of gilded paper were round its head, and one absurd wooden arm was raised, holding a *bâton*." A more encouraging sight was a village school with its rows of little girls with small brown faces and twinkling dark eyes, with clean and freshly starched clothes, and the American soldier teacher, who "called on one damsel after another to translate alternately in Spanish and English the stereotyped remarks about uncles, nephews, gardens, wives, pens and ink." Mrs. Colquhoun's general impression is apparently summed up in the statement that "the United States is leavening the whole lump with the spirit of utilitarianism and progress."

Two American girls were her companions during this part of her journey, and as they were the first

"to pass through the islands after the American occupation, and as many of the young officers at distant stations had seen no women-kind for eighteen months or more, they fell easy victims to the charms of the sisters, who left a track of bleeding hearts behind them. Usually, on returning from a visit to the shore, they were followed by detachments of orderlies bearing curios of all kinds, of which the young fellows stripped their quarters to present to the belles. On one occasion Sadie returned almost empty-handed, and, in reply to my question as to 'loot,' said scornfully: 'These men are not the *giving* sort; they're only the *promising* sort. Still,' she added pensively, 'I left my address.' "

Her enjoyment is at its height in the "quaint, beautiful, picturesque country" of Japan; and the descriptions of its life, and particularly of the women, their dress and occupations, are among the most interesting in the book. In an account of a pottery manufactory Mrs. Colquhoun contrasts the fine and dainty old Satsuma with the work now turned out in cartloads for the "European and (especially) American markets." In a "terrible modern show-room . . . monstrosities are ranged in rows, and gold is piled on gold, blue shrieks against blue, and yellow quarrels with magenta, till one shuts one's eyes and hurries for relief into the next room, followed by smiling Japanese, who say, 'Yes! it is all velly bad, but sell velly much!' "

The homeward journey was by the Siberian Railway, and if Mrs. Colquhoun is to be trusted, eastern Siberia is not prosperous. The harbor of Vladivostok, "which used to be dotted thickly with vessels, was almost devoid of them and trade was being driven to Talienwan." In the interior were some isolated towns, and "here and there a few log huts, twenty or thirty people, and a few cattle, and then for miles silence and emptiness. . . . The people live the lives of brute beasts, have no education, no amusement, save perhaps to listen to a crazy accordion or musical box, and but one change of clothes in the year. Their chief distraction is the consumption of *vodka*." Even Irkutsk, "as night approaches, . . . takes a forbidding air, for all windows and doors are shut and barred, the shops with great iron clamps like those of a prison. Few people are seen about, for the streets are still unsafe in this convict city, and only here and there a shaft of light from an upper window tells one that the place is really alive." Conditions improve as the Urals are approached. "Many brown wooden towns—better built than any we had seen before, with little flower-gardens and plots of vegetables—are scattered over this country," and the two days' journey in European Russia to Moscow was through one enormous cornfield. Mrs. Colquhoun takes her readers back with her to London, and closes her genial chronicle with a kindly wish to her friends, "known and unknown," that they may have "voyages as fortunate as ours, and hearts as light to enjoy."

---

*China and the Chinese.* By Herbert Allen Giles. Macmillan Co. 1902.

The Columbia University was fortunate in securing the foremost living English scholar in Chinese to inaugurate the foundation, by Gen. Horace W. Carpentier, of the Dean Lung chair of Chinese. Without pretence of advancing Chinese scholarship, but rather to arouse interest in a subject of increasing importance, the English professor of Chinese at Cambridge sends forth this volume at the request of the authorities of Columbia University.

The study of the oldest and most populous empire on earth suffers from the same disadvantage as does the earlier history of New York as treated by Diedrich Knickerbocker. The ludicrous side of China and her civilization was the one which first attracted the attention of foreigners, and to a great extent it does so still. The study of similarities and identities with the facts of ancient European life and with the modern Occident not only shows more and more the common humanity of the peoples East and West, but demonstrates that, from similar circumstances and forces, similar results will issue. On this principle Dr. Giles has proceeded throughout. Happily, he is thoroughly familiar with Chinese literature as well as with external conditions. Indeed, he handles every one of his chosen subjects with such consummate ease that we imagine some of his readers will suspect the depth of his scholarship; yet many a writer might envy his absolute mastery of his themes. This book makes easy reading, even for a boy or girl.

As for the ludicrous situations, they often occur in China because Chinese customs are violated by ignorant foreigners. For example, the invariable cup of tea served to a visitor on arrival is not intended for ordinary drinking purposes, for which wine is usually provided. To drink this tea is to give the signal for departure. Hence Chinese servants, unless previously warned of the funny ways of the alien, will at once give a shout to the bearers to be ready with the sedan chair. Indeed, when the time is up and the host has engagements elsewhere, he may, without breach of good manners, be the first to drink, thus delicately dropping a hint to his guest that time is valuable even in China. Some other things it would pay the expectant visitor to China to read in the delightful chapter on Chinese manners and customs. With

masterly ease and scholarly thoroughness, are discussed in the six chapters, the Chinese language, the national body of literature, democratic China, and Taoism, which last, take it all in all, is, in critical acumen, historic, and especially chronological accuracy, proof of critical acquaintance and power of interpretation, and freedom from prejudice, one of the best discussions of the subject that we know of. The fourth lecture is a suggestive and illuminating comparison between China and ancient Greece. The author gives us a good index, and closes his very readable work with a plea for a serious and systematic examination of the modes of thought and manners and customs of the Chinese people, in place of the silly stuff of which we have a plethora in the works even of visitors to the country itself.

On one point, those who love the beautiful ideograms of China will grieve. Despite good print, paper, and binding, it seems positively disgraceful that, in place of the author's pen strokes (and Dr. Giles is very far from being a calligraphist in Chinese), there should not be in the wealthy city of New York a font of Chinese type with intelligent workmen to use it. When shall our boastful country have a tithe of the resources of Leipzig or Leyden in this respect?

---

*Masterpieces of Greek Literature.* Boston: Houghton, Mifflin & Co.

Such is the title of a book of selections from well-known translations of eighteen Greek writers, from Homer to Lucian. It is under the "supervising editorship" of Prof. J. H. Wright of Harvard, whose name appears alone on the back and title-page of the volume. Professor Wright contributes an "Introduction" of eight pages, which is, we need hardly say, scholarly and suggestive, and very unlike the usual perfunctory "foreword." With it Professor Wright's responsibility ends. The selections were made, and the biographical and other notes were written, by Miss Clara Seymour, "with the counsel of her father," the eminent Greek professor at Yale University. The work, which is an evidence of Bryn Mawr scholarship, appears, therefore, under the ægis of both Harvard and Yale.

This is not the place in which to raise the question of the possibility of a satisfactory translation of a Greek masterpiece. For the student of history and philosophy, such a translation as Jowett's Plato or Jebb's Thucydides serves all the purposes of the original. For the student of literature it does not. A translation, then, can reproduce statements of fact, and, in the hands of a master of English prose, can rise to the level of the classic—an English classic. The cases in which this has occurred can be counted on the fingers of one hand. For the translation of Greek poetry is needed a scholar who has the instinct of a poet; but when the rare combination arises, when the scholar has the poetic imagination, like Matthew Arnold, or the poet is scholarly, as in the case of Mr. Swinburne, his feeling for the perfection of the original amounts to paralysis. It is in Swinburne's paraphrases, if anywhere, that the ashes of Sappho burn again. But even Swinburne despaired of an adequate translation of the Odes. "Immortal Venus, throned above," begins Merivale's version of the first ode, "To Aphrodite," reproduced by Miss Seymour. "My feeble pulse forgot to play" is a line from Phillips's rendering of the ode of which Longinus said that it was a "congress of the passions." The Sapphic metre is not even attempted, and the language and the emotions it inspires are equally frigid. Yet, since Swinburne carefully wove his paraphrases into his own verse so that they cannot be used for quotation, Miss Seymour has offered the general reader the best at her disposal. We can only assure him that these versions express Sappho about as nearly as Pope expresses Homer. The case of Homer is notorious. The benefit of a verse translation of Homer rests with the translator. Miss Seymour reproduces portions of Bryant's Iliad and of Worsley's Odyssey. Some fail less conspicuously than others, is all that one can say of Bryant and Worsley. Miss Seymour includes the whole of Mrs. Browning's "Prometheus Bound" and Plumptre's "Antigone," with nearly the whole of the "Alcestis" in Browning's transcript. These versions are at least alive, and are nearly always scholarly.

The selections have been well made, and the biographical and other notes are clearly written and sufficient for the general reader, to whom we heartily recommend the volume.

---

*Stories in Stone from the Roman Forum.* By Isabel Lovell. Illustrated. The Macmillan Co.

"This book," said a girlish critic to whom it was submitted, "is written in words of one syllable." The title might suggest to the general reader a learned treatise on dusty archæology; but if he takes it up reluctantly he will not willingly lay it down; and if he has ever tried for himself to investigate, under a pitiless Italian sky, the intricate ruins of the Forum, he will breathe a sigh of relief when this new guide takes him gently in hand. The style of the book is clear and readable, but so elementary as to make one feel that it was written for children. It has withal something of that rhetorical manner which people needlessly employ for such readers. Sometimes (as on page 141) the description bursts into the form of rather declamatory dialogue, with such appeals as "Look once more, I pray thee. Doth no one come?" The first chapter explains the uses of the Forum, with helpful bits of history woven in; and the reader who has left the classics behind with his school days will gladly have his memory so easily and pleasantly refreshed. The last chapter describes the Forum's streets, and the gorgeous processions which once passed through them, while the intervening chapters are chiefly devoted to the temples formerly erected there.

Our author has a little unconscious trick of sometimes relating miracles, and the old legends of the interference of gods in earthly affairs, as if they were purely historic. Truly poetry and history are so interwoven in that region that it is difficult to disentangle them, yet the seeming statement of tradition as fact might well puzzle a child reader. But the book is, at any rate, the history of Rome in a nutshell, giving vivid pictures of the heroic days, tinted with the entrancing colors of the old mythology. The illustrations give a good idea of the present ruins, but the plates showing "restorations" of buildings may, perhaps, be a little confusing to young readers who do not understand that these restorations are imaginary only—a fact which even the preface does not state in so many words. One would like to know, also, whether the very imposing list of "authorities" which opens the book represents writers consulted in the original or only at second-hand.

---

*The Soul of a People.* By H. Fielding Hall. Macmillan. 1902.

Neither the popularity of the subject nor the scholarship of the author can account for the welcome accorded to this book, which in four years is already in its fourth edition. It is rather the remoteness of the subject, Burmese religion, which attracts; but the chief factor is the author's spirit. He does not know much about Buddhism as a system, but he is familiar with Burmese Buddhism as a working religion, and, seeing its influence upon a light-hearted population, he is fascinated by it and joys in it, till, out of the fulness of his joy and wonder, he tells us about it, simply, affectionately, and so effectively. This is the charm of the book; its naïve ignorance and idealization are almost childish, but the unaffected earnestness of the writer makes good the ignorance, for it calls attention to facts of Buddhism that are often neglected. Thus the net result is rather a gain, even to the scholar who marvels to hear any man say of Buddhism that "it stands alone here amongst all religions, pure from the tinsel of miracle," while the learned are still discussing whether the miracles of Buddhism were loaned to Christianity. Again, our author says that a Buddhist monk enters a monastery "to prepare his soul for heaven," whereas Buddhism denies both soul and heaven; and that to the Buddhist "the great God lives far behind his laws," whereas Buddhism knows no law save *Karma*, and has no God at all. And if Mr. Hall chooses to call Buddhism an optimism, not a pessimism, he does so by changing the meaning of these terms. To him, the Buddhist lives "in a real world, and knows it is good," but Buddha himself knew that it was evil.

When Mr. Hall goes further afield and cites (on page 190) from the "laws of Manu" verses which are not found in Manu, we are not surprised, but only wonder why this apocrypha is deemed necessary to the discussion. Yet this false citation is typical of the historical inaccuracy that obtains throughout the book. The reason is not far to seek. Mr. Hall's Buddhism is not Buddhism; it is the gentle Burmese caricature of Buddhism. Even our author admits this, saying finally of the Burmese villager that "he has made for himself out of Buddhism a belief that is opposed to all Buddhism in this matter" (of life after death). So at last we have the secret: the "Soul of a People" is the soul of Burma, and this is of great interest. But it is an error on the part of the author to exploit as Buddhism throughout the book what at the end even he confesses is not Buddhism at all. Take away pessimism and the hope of eternal extinction, and what Buddhism have we left? A belief in soul, heaven, meeting with

loved ones hereafter, a great and good God —it is no wonder that such a belief touches a sympathetic chord. This is "Buddhism" in Burma. But this is the belief that Buddha thought he had demolished forever.

---

*The Story of Verona.* By Alethea Wiel. London: J. M. Dent & Co.; New York: Macmillan. Pp. viii., 314.

It is good to be reminded once in a while how superlatively interesting is such a city as Verona—a "city which," as Mr. Street says in his 'Brick and Marble in the Middle Ages,' "perhaps more than any other in northern Italy charms the cultivated traveller by the beauty, interest, and grandeur of its buildings." When one considers that Mr. Street was utterly blind to all beauty in architecture that did not date from a certain limited epoch, and that his estimate ignores a full half of what delights the "cultivated traveller" of to-day; when one recalls, moreover, that Verona was the seat of an important school of painting, and that its history is, like that of Siena, Perugia, and many another of the minor cities of Italy, brimful of picturesque and thrilling incident—one is only too thankful for the handy volume that marshals these riches conveniently for review. It forms one of the "Mediæval Town Series," and, without being either the best or the worst of that series, it is still a very creditable performance. Without any pretence of original research, and for the most part relying upon books that are accessible to everybody—especially for all that relates to art—Mrs. Wiel has given a résumé of the story of Verona, an account of its treasures of architecture and painting, that constitute an agreeable supplement to the ordinary vade-mecum. Those who are fortunate enough to linger a few days in the fair city on the Adige may find their advantage in the use of her careful and conscientious compilation. The volume is very prettily illustrated from drawings by Nelly Erichsen and Helen M. James, as well as by halftone reproductions of pictures of the Veronese school, and its value is considerably enhanced by a good index.

At the same time, it should be acknowledged that Mrs. Wiel's work has the defects incident to its qualities, as well as some others less respectably connected. Conscientious people are rather given to "sitting on the fence," and our author is one of those not above this weakness. She is continually admitting that there are two opinions as to this or that bit of history, archæology, art or tradition, without ever trying to establish which one is the right. This, however, is less the defect of a quality than the shady side of a shining virtue: we sometimes wish it remained with her on the occasions when she "knows her own mind." The woman in her perhaps aiding, she can be quite certain about one of her own sex. No doubt Samaritana da Polenta, wife of Antonio della Scala, had her share of human frailty: she was of the family whence came Francesca da Rimini; but, perhaps too much influenced by that consideration, we hesitate to condemn her altogether, although we have Mrs. Wiel's word for it that her taste in jewelry was "ridiculous—not to say vulgar," and that, though she was alone among the wives of Veronese rulers to encourage literature and the arts, "she was in reality too vain and frivolous to care for learning for its own sake."

This case of downrightness is, however, almost unique. Of another sort is a statement that amused us more than was perhaps intended. The writer is so impressed with that picturesque stone known as "tufo" that she puts it into the index, and in one place says of it: "This 'tufo' must be cut from the quarries in summer, when it hardens into such *solidarity* [the italics are ours] as to make it well-nigh everlasting." Still, in general, we have not to reproach her with either excessive severity or undue liberties with her vocabulary. Her careful compilation is fairly correct, is, moreover, readable, and the author's want of decision about disputed points is, we repeat, commendable in a work that makes no pretence to original research. Its chief failing is amateurishness, and its second, the liberal crop of misprints that disfigures its pages. The latter may be mended in a succeeding edition, the former must be left to the discipline of future work. The tendency to the repetition of pet turns of expression, to the occasional brief bursts of fine writing, to a gentle inanity of commentary, and to the use of certain inelegancies of speech, will disappear under the correcting influence of practice.

---

*Archæological History of Ohio:* The Mound Builders and Later Indians. By Gerard Fowkes. Published by the Ohio State Archæological and Historical Society. Columbus, 1902. 8vo, pp. xvi, 760.

In Ohio are found the most remarkable of the works attributed to those ancient Americans called the Mound Builders, and here, too, is the field of much that is important and interesting in our later aboriginal history. Probably more nonsense has been written about the Mound Builders than about any other people that ever existed, the "Ten Lost Tribes of Israel" not excepted. Fables of "a lost civilization," "geometrical instruments," "a compact civil organization," "myriads of people," "magnificent cities," "an extensive empire," have been rolled from writer to writer, increasing like a snowball as they progressed, until there are many intelligent persons who believe that there dwelt in the Ohio Valley an intellectual and civilized race vastly superior to and totally different from our Red Indians. Hence it is gratifying in the highest degree to have presented in the graphic and attractive manner of the present work the facts as they exist, and the conclusion to which they inevitably lead: "Nothing yet discovered proves for any of the Mound Builders a higher intellectual capacity than is, or was, possessed by more than one well-known tribe of American Indians."

To the demonstration of this thesis Mr. Fowkes gives two-thirds of his book, analyzing, ridiculing, and demolishing the reckless statements of many a romancing predecessor, and establishing beyond cavil such points as these: To erect the works required neither great skill, large numbers, nor long time. The artifects found in the mounds do not in any particular surpass those picked up on the surface and known to be the work of the recent Indians. In no particular were the Mound Builders in advance of many known tribes. The "mathematical figures," except those at Newark, are of the rudest character. The perfect circle at Newark could have been made by any one possessed of the knowledge that a string continues of the same length in whatsoever direction from a centre it be extended. The square at Newark, alone, requires a geometrical operation, but not one of a highly complicated order (and, indeed, a square can be laid out by a formula even simpler than that used by Mr. Fowkes). It is distinctly refreshing to find a book so accurate and sane in treatment of this mania-producing subject. Here is, however, no history of the Mound Builders, for this author is no more able than his predecessors to tell us who or when they were, nor why they constructed such extraordinary works. The Indian history of the State where was, as now seems probable, the early home of the Siouans, and perhaps also of the Iroquoians, is ignored; and we pass from the Mound Builders to a brief account of the recent Indians and a long account of their stone implements, including a good description of the famous Flint Ridge, the chief armory of the Indian.

Excellent as this book is, the author's zeal in demolishing venerable fables leads him by mere momentum to overrun his objective, and to belabor quite indiscriminately all his predecessors in the field, both the sensible and the foolish. To those early and industrious workers, Squier and Davis, Mr. Fowkes does try, not always with success, to be just; but in exploiting his rather neat vein of sarcasm he treats Messrs. Shaler and Putnam with no more respect than if they were the "silly" Larkin or Hosea of the mighty imagination. When Mr. Fowkes reads his own book critically he will discover that he is not infallible himself. Yet, all in all, his is a valuable book, and, if properly circulated, will do much to substitute in the popular mind fact for romance concerning our Mound Builders and later Indians. It is a great pity that such excellent matter is not presented in better print and binding. We do not know who prepared the Bibliography found in an appendix. His work would be more valuable had he known that a citation of a book is improved if title, date, and name of author are correctly given.

---

*La Propriété Rurale en France.* Par Flour de Saint-Genis. Paris: Armand Colin. 1902.

Few subjects are more fascinating to the student of history than that here treated. Rightly considered, the political history of France is sad enough. It consists mainly of struggles to establish despotic power, and of struggles to maintain and extend it. There is too much of glory in it for human happiness. But the minute homesteads whose boundaries cover France with infinitesimal reticulations, constitute a record of struggles of another kind prolonged for almost twenty centuries: struggles to subdue the earth, to win bread, to maintain the family, to secure a refuge against adversity. One of these little heritages is an epitome of man's life; one cannot think without emotion of the many generations that have come and gone upon it, that have bathed it with the sweat of their brows and enriched it with infinite toil, that have loved it with consuming devotion and parted from it with bitter tears. To

trace its history, to ascertain the forces that affect it, to predict its future, are pursuits which attract the best of French talent and call forth the most engaging qualities of that amiable people.

The work before us, although crowned by the Academy of Moral and Political Sciences, is in some respects disappointing. It is altogether too diffuse, and filled with well-meant but tiresome platitudes. The author seems to have formed no plan before beginning his work, and to have been overwhelmed by the abundance of his materials. Hence it is no slight task to select what is valuable from the confused mass; but whoever has patience will be rewarded. The author has analyzed with care a great number of statistical returns bearing upon the size of properties, the number of proprietors, the causes and effects of subdivision, the influences which favor the acquisition of land, and those which are adverse. We cannot even enumerate his conclusions, and must content ourselves with referring to some of the most important of them.

Two things are especially impressive: the intense desire of the French to possess land and to maintain the family, and the frightful obstacles which their oppressive Government interposes. The common people of France have always been deprived of the invaluable political training which local government gives, and they are altogether incapable of resisting their centralized administration. There are local councils, it is true, but they have few powers, and their action is regulated from Paris. It is only natural that the ambition to be connected with this all-powerful central Government should displace that generous passion which we call public spirit. It is indeed surprising that where the Government assumes control of so great a part of human activity, there should be so much of private benevolence as is displayed. It is not surprising that where the exactions of Government are so severe, most Frenchmen concentrate their energies on providing what they can for their families.

The processes by which the more than fourteen million rural properties in France are constantly uniting and dividing resemble the processes of nutrition and waste in a living organism. The system of entail provided by the Code compels incessant partition; there are 10,500,000 properties of less than two hectares, and 2,175,000 over two and under six. The number of proprietors is far smaller; in 1898 there were about 250,000 transmissions of rural property through death. The number of small properties does not increase, because the Government confiscates much of their value by taxation, and the owners are forced to sell them. The expense of partition under the Code is estimated by this author at from one-fifth to two-fifths of the value of the properties. When there are minor heirs, judicial partition or sale is compulsory. From 8 to 10 per cent. of the *héritages* are estimated at less than 500 francs, and the expenses of administration exceed this sum. The cost of ordinary sales is almost prohibitive. There are other deplorable features in the situation, but we need not specify them. The declining birth-rate and the drift of population to the cities are the inevitable results of the fiscal policy here described. As to those who suffer from it, we heartily agree with the author when he exclaims:

"N'est-elle pas admirable, cette race de travailleurs qui, en dépit des obstacles, des déceptions, persiste, grandit, se perpétue, semblable à ces ruches dont on coupe périodiquement le meilleur du miel et qui ne se lassent pas de produire pour autrui."

*Elementary Studies in Insect Life.* By Samuel J. Hunter, A. M., Associate Professor of Comparative Zoölogy and Entomology, University of Kansas. Topeka, Kansas: Crane & Co. 1902.

In this book the author has abandoned traditional lines, and, instead of telling first about the characters that distinguish the Insecta, he plunges at once into the life cycle, devoting to it one of the longest chapters in the book, so far as number of pages is concerned; but ten of these pages consist of a series of figures illustrating the complete life cycle of one insect. The special senses are lightly touched, protective devices receive a somewhat fuller consideration, while solitary and social life (chiefly among the bees, wasps, and other Hymenoptera) are given two chapters. Instinct and reason are very briefly treated; but the author credits bees and wasps, at least, with reasoning powers. The mutual relations of plants and insects are somewhat fully considered, and our friends and foes among the class are grouped according to the character of the affected crops. Methods and apparatus for collecting and studying, and structure and classification of insects, are condensed into less than eighty pages, of which seventeen give in tabular form the distinctive characters of the larger groups of insects. An appendix of thirty-one pages treats very briefly of injurious insects and modes of dealing with them. Altogether, the book is interesting and informing, covering just the ground expressed by the author in the title. It will be useful for those who want a general knowledge of the peculiarities of insect life and development, and the author has an easy style that makes reading pleasant.

The pictures are mostly half-tones, and a large number of them are distinctly poor. Some that are made from drawings (103, 115, 119) are inaccurate in outline or detail, and others are obscure and much inferior to published pictures of the same species. Why the unsymmetrical, vaguely outlined representation of the buffalo moth beetle on p. 149 was preferred to the beautifully accurate figure that could have been obtained from the United States Department of Agriculture, passes understanding. The type is clear and the print fair, but not good enough for the numerous half-tones that are scattered through the text.
